PUBLIC DISCLOSURE

April 10, 2023

Ms. Sallie Tanner
Executive Secretary
Georgia Public Service Commission
244 Washington Street, SW
Atlanta, Georgia 30334-5701

Re: Georgia Power Company's Fuel Cost Recovery (FCR-26), Docket No. 44902

Dear Ms. Tanner:

Georgia Power Company ("Georgia Power" or the "Company") has identified an error in the generation MWhs attributed to Georgia Power in the Historical Minimum Filing Requirements ("MFRH") filed in this proceeding. Specifically, generation MWhs from Georgia Power's co-owned coal units were attributed to Georgia Power rather than one of the other co-owners. This issue only impacted Georgia Power's reported generation MWh supply and did not impact the Company's actual fuel revenues or costs. The immaterial change does not impact the reported under-recovered fuel balance or alter the Company's recommendations regarding fuel rates for the projected period.

Enclosed for filing are errata for the two affected MFRHs (MFRH-2 and MFRH-5-13). In addition, the error requires one edit to the Direct Testimony of Sarah P. Adams and Adam D. Houston; specifically, on page 12, line 7, the coal generation percentage should read 25.1%, not 20.7% as currently written.

If you have any questions, please don't hesitate to contact me at 404-885-3475 or via email at Steven.Hewitson@troutman.com.

Sincerely,

Steven J. Hewitson

Enclosures

BEFORE THE GEORGIA PUBLIC SERVICE COMMISSION

GEORGIA POWER COMPANY
DOCKET NO. 44902 (FCR-26)

BASIS FOR THE ASSERTION THAT CERTAIN REDACTED PORTIONS OF THE MINIMUM FILING REQUIREMENTS ARE PROTECTED TRADE SECRETS

As part of its Fuel Cost Recovery Rate (FCR-26) Application in Georgia Public Service Commission (the "Commission") Docket No. 44902, Georgia Power Company ("Georgia Power") has submitted to the Commission Minimum Filing Requirements for the Historical Period Fuel Data and Information ("MFRHs") in accordance with Commission Rule 515-2-1-.04(6). The MFRHs include considerable amounts of data, including, but not limited to, the following: (1) fuel supply and transportation contracts including plant inventory targets; (2) schedules for plant maintenance and descriptions of planned and unplanned outages including cost of replacement power; (3) generation and capacity by plants including availability and heat rate; (4) data involving environmental compliance and cost of emission purchases; (5) fuel procurement and transportation strategies including railcar leases and maintenance cost; (6) strategies and gains/losses related to natural gas hedging; (7) purchased power and off-system sales; (8) detailed fuel inventory and cost by plant and fuel type; (9) operating spinning reserves; (1)) retail sales by customer class and voltage level; and (11) fuel price workshop presentations and other fuel market updates detailing the forecast of fuel prices. The information included in each of the MFRHs, except for that provided in MFRH-1, MFRH-1.1, MFRH-3.3, MFRH-8, MFRH-13.5, MFRH-14, MFRH-15, and MFRH-17, (collectively the "Information") constitutes trade secrets of the Southern Company, Georgia Power, and certain of its affiliates (the "Company") and is therefore protected from disclosure under Commission Rule 515-3-1-.11.

The Information derives economic value from not being generally known to and not being readily ascertainable by proper means by other persons who can obtain economic value from its disclosure or use. Specifically, revealing the Information would give competitors a competitive advantage in the marketplace by revealing the Company's costs and a vast amount of confidential details regarding the Company's fuel procurement, use, and operational strategies. If the Information was disclosed to the public, a competitor could use the Information to tailor proposals with the intention of targeting certain groups of customers, thereby undermining the Company's market position. Competitors could also use the Information in determining the Company's costs of operation, including the Company's marginal costs. Such information would enable competitors to undercut bids to win both wholesale and retail customers. In addition, such Information could reveal the Company's needs in the short term and allow future fuel vendors to artificially adjust and artificially inflate their offers, which could result in economic harm to the Company and its customers. Potential future vendors could also use the Information to their advantage in future negotiations to the Company's detriment.

Competitors of the Company are not generally required to disclose similar information and to require the Company to do so would put it at an economic disadvantage.

The Information is subject to extensive efforts to maintain its secrecy. Only select Company personnel are granted access to the Information. Those personnel receive access only on a "need to know" basis. If parties outside the Company are granted access to the Information, they are required to sign confidentiality agreements with respect to the Information.

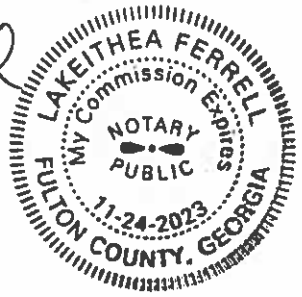

Sarah P. Adams, first being duly sworn, deposes and states that she has reviewed the MFRHs included in this filing in Docket No. 44902, and that to the best of her knowledge the specific information designated as trade secret constitutes trade secrets in accordance with O.C.G.A. § 10-1-761 (2020).

Sarah P. Adams
Vice President and Comptroller
Georgia Power Company

Subscribed and sworn to before me this 24th day of February, 2023.

FCR-26 Historical Period Generation Cost Variance from Budget Operation Summary

FCR-26 Historical Period Cost Summary

(January 2020 – December 2022)

Summary

GPC's total fuel costs related to operations for the FCR-26 Historical Period (January 1, 2020 through December 31, 2022) were $2.69B above budget (REDACTED).

Energy costs for gas and purchases were above budget during the period. These variances were partially offset by below-budget energy costs for Coal and nuclear. In total, price variances resulted in $2.52B in additional fuel costs.

Coal, nuclear, and gas generation were below budget for the period and were replaced by the excess purchased power, hydro, and solar generation. Replacement energy resulted in additional fuel costs of $129.02M.

GPC's supply requirements were above budget (REDACTED) and resulted in $39.98M in additional costs. The supply requirement variance was reflected in increased hydro generation, solar generation, and purchased power.

Resource Cost Impact (+$2.52B)

Natural Gas (+$1.44B):

Gas generation costs averaged REDACTED, REDACTED above budget. Average Henry Hub natural gas costs were above budget for the balance of the period and were the primary driver of the variance.

Coal ($257.37M):

Coal generation costs averaged REDACTED, REDACTED above budget. Increased generation from higher-cost units during high-load periods and higher fuel costs were a primary driver of the above-budget costs.

Nuclear (-$9.37M):

Nuclear generation costs were REDACTED (REDACTED) below budget.

FCR-26 Historical Period Generation Cost Variance from Budget Operation Summary

Purchases (+$832.34M):

Purchase power costs were REDACTED (REDACTED) above budget. Above budget pool and off-system purchases drove the variance.

Replacement Energy Impact (+$129.02M)

Solar generation (REDACTED), hydro generation (REDACTED), and purchased power (REDACTED) were above budget for the period. All other generation sources were below budget.

The REDACTED gas generation deficit (REDACTED) was likely replaced by excess purchased power, resulting in $25.78M of additional fuel costs.

The REDACTED Coal generation deficit (REDACTED) was likely replaced by excess purchased power, resulting in $67.9M of additional fuel costs.

The REDACTED nuclear generation deficit (REDACTED) was likely replaced by the less expensive excess hydro and solar, and then the excess purchased power, resulting in $35.3M of additional fuel costs.

Resource Supply Impact (+$39.98M)

Resource supply requirements during the period were slightly above budget (REDACTED, REDACTED). The variance was reflected in increased purchased power and resulted in $39.98M in additional fuel costs.

FCR-26 Historical Period Generation Cost Variance from Budget Operation Summary

Supply MWh

Supply was REDACTED MWh above budget (REDACTED).
Gas was REDACTED MWh below budget (REDACTED).
Coal was REDACTED MWh below budget (REDACTED).
Hydro was REDACTED MWh above budget (REDACTED).
Nuclear was REDACTED MWh below budget (REDACTED).
Purchases were REDACTED MWh above budget (REDACTED).
Solar was REDACTED MWh above budget (REDACTED).

Generation Rates (Cost/MWh)

Average gas cost per MWh was REDACTED above budget.
Average Coal cost per MWh was REDACTED above budget.
Average nuclear cost per MWh was REDACTED below budget.
Average purchase cost per MWh was REDACTED above budget.

FCR-26 Historical Period Generation Cost Variance from Budget Operation Summary

Definitions

Resource Cost Impact: This category captures changes in price ($/MWh) of the generation resource. If the generation resources would have exactly met budget volumes (MWh), this would have been the cost variances experienced.

Replacement Energy Impact: This category captures impacts of replacing the energy deficits in under-budget generation resources with excess energy from over-budget generation resources. Starting with the under-budget generation resource that has the lowest budgeted cost ($/MWh), generation deficits are replaced with the excess generation from over-budget generation resources; also starting with the resources with the lowest budgeted cost. The replacement energy is valued at the difference between the budgeted cost of the over-budget resource and the under-budget resource.

Resource Supply Impact: This category captures the costs of increased or decreased energy output supplied to meet demand. After replacement energy, the generation resources with the highest budgeted costs ($/MWh) are deemed to have responded to the budget variances in total supply. This surplus or deficit energy is valued at the budgeted cost of the over- or under-budget resource to determine the cost of resource supply variances.
