Georgia Power

Distributed Energy Resources (DER) Customer Pilot Program

Next-Level Resilience Against Catastrophic Weather

Georgia Power's new Resiliency Program pilot provides customized onsite backup power solutions for a more resilient business.

WHY RESILIENCY?

Catastrophic weather events can impact your electric service and disrupt your operations. The Resiliency Program pilot gives customers peace of mind by providing backup electric service for extended durations.

PROGRAM DESCRIPTION

The program is applicable to Commercial & Industrial customers and is implemented under two complementary tariffs: the Resiliency Asset Service (RAS-1) Tariff and the Demand Response Credit (DRC-1) Tariff.

RAS-1

- Service is provided via a new customer-sited resource behind the meter .
- Georgia Power designs, procures, installs, owns, operates, and maintains the equipment and charges the customer a fixed monthly payment.
- Participation includes a service agreement that identifies the scope, pricing, and commercial terms.

DRC-1

- Georgia Power offers a credit for demand response that allows Georgia Power to dispatch the resource through operation of the DER during a system reliability event.
- In exchange, Georgia Power will provide customers with a fixed monthly credit which offsets a portion of the cost of the resource.
- Optional tariff for participating RAS - 1 customers

PROGRAM ELIGIBILITY

- To participate in RAS-1, a minimum annual peak load of 200 kilowatts (kW) is required.
- To participate in DRC-1, RAS-1 participation is required AND a minimum of 1,000 kW of demand reduction must be achieved.
- Customers can aggregate multiple accounts under the same corporate ownership to reach the 1,000 kW minimum so long as the minimum peak demand at each premises is >200 kW AND a single point of contact is designated by the customer.
- Customers on certain rate plans are ineligible to participate in the DRC: Fixed Pricing Alternative, Electric Arc Furnace, Demand Plus Energy Credit, and Time of Use – Supplier Choice. Customers on Real Time Pricing have certain restrictions based on their firm load.
