STF-16-1 On February 7, 2024, AGL filed a petition for Port Wentworth project. As a separate Excel spreadsheet called **Attachment-STF-16-1**, please provide the following:

a. In Column-A, please list the name of the entities who will invest the $50 million.

b. In Column-B, please list the name of the companies that will want natural gas service.

c. In Column-C, please designate the entities as either Government or Private.

d. In Column-D, please list the dollar amount of investment each entity will contribute.

e. In Column-E, please list the estimated number of therms each customer will use annually. If the entity won't use natural gas, fill in as n/a.

RESPONSE:

See Attachment STF-16-1. The project filing included investments and loads known at the time, which satisfied the qualifications for ECON-1 Tariff treatment. The Attachment is updated with current information.

Respondent: William Horne
Director, Resource Planning & Economic Development
Atlanta Gas Light Company

STF-16-2 From new articles, it appears the ice rink for the Ghost Pirate hockey franchise practice facility is one of the named facilities that will be part of the commercial development. Will this ice rink use natural gas, and if so, how will it be used?

RESPONSE:

The ice rink facility will use natural gas for space heating, water heating, and food preparation.

Respondent: William Horne
Director, Resource Planning & Economic Development
Atlanta Gas Light Company

STF-16-3 It appears that part of the right-of-way is in a marshy area. Does AGL foresee any additional engineering or environmental costs to extend service in this area? As seen in the map below. See the Google Maps screen shot below.

RESPONSE:

Construction conditions identified in the estimating process, such as wetlands and any associated environmental requirements, are included in the cost estimate. The cost represents AGL's best estimated cost to serve this complex based on factors observed in the estimating process, but actual project costs may vary depending on construction conditions experienced during natural gas facilities installation.
