

**BEFORE THE GEORGIA PUBLIC SERVICE COMMISSION**

**GEORGIA POWER COMPANY  
DOCKET NO. 56002**

**AFFIDAVIT AND BASIS FOR THE ASSERTION THAT PORTIONS OF THE  
INFORMATION SUBMITTED ARE PROTECTED TRADE SECRETS**

As part of its 2025 Integrated Resource Plan ("2025 IRP"), filed in Docket No. 56002, Georgia Power Company ("Georgia Power" or the "Company") submits to the Georgia Public Service Commission Technical Appendix Volume 2, which contains certain information regarding the company's financial data, proprietary planning processes, technology screening assumptions, technology and resource cost information, economic analyses, environmental compliance costs, including projected and current cost estimates for coal combustion residual asset retirement obligation ("CCR ARO") ash pond closure and landfill projects, Critical Energy Infrastructure Information ("CEII") related to the Company's blackstart facilities, and other data of the Company (collectively, the "Information"). Certain portions of the Information are trade secrets of Georgia Power and Southern Company and their affiliates and is therefore protected from public disclosure under Commission Rule 515-3-1-.11.

The trade secret portions of the Information derive economic value from not being generally known to, and not being readily ascertainable by proper means by other persons who can obtain economic value from their disclosure or use. Specifically, the trade secret portions of the Information contain competitively sensitive cost information related to available technology options, processes and data used by Georgia Power in analyzing resource addition schedules, financial data used in the Company's forecasting, and other confidential details. Public dissemination of the trade secret portions of the Information would allow Georgia Power's competitors and suppliers to have access to such processes and strategies and thereby gain an unfair competitive advantage in the marketplace. Competitors would obtain an unfair advantage because they are not required to reveal similar information and can utilize such trade secret portions of the Information to manipulate pricing and timing of supply to the disadvantage of Georgia Power. Competitors would also unfairly benefit in having access and insight into the Company's planning processes and methodologies. With this competitive advantage, Georgia Power will potentially pay higher prices to suppliers, ultimately harming Georgia Power and its customers. The Information also includes sensitive details concerning Georgia Power's electric system infrastructure that must be protected from public disclosure in the interests of system security and reliability. Such portions of the Information contain CEII as defined by the Code of Federal Regulations Section 388.113.

The trade secret portions of the Information contained herein also include details concerning Georgia Power's projected environmental capital investments, cost data, and analyses, all of which have economic value that could be inappropriately leveraged by competitors, vendors, or other persons. Specifically, the trade secret portions of the Information contain competitively sensitive details on the site specific and CCR unit specific costs the Company is expected to incur to close its ash ponds and landfills as well as the timing. Publicly disclosing these costs would allow bidders and vendors to tailor proposals according to the Company's expected costs, setting an artificial floor on bidding to the detriment and harm of the Company and its customers. Disclosure of the trade secret portions of the Information could prevent the Company from adequately soliciting and obtaining the best cost estimates for future consulting work and harm the Company's efforts to

obtain optimal pricing in current or future negotiations. In addition, the Company's competitors are not generally required to disclose similar information, and to require the Company to do so would put it at an economic disadvantage.

Additionally, certain trade secret portions of the Information contain proprietary cost data and analysis prepared on the Company's behalf by outside consultants. These studies were prepared by paid consultants of the Company at a significant cost and thus derive economic value from not being generally known. To allow competitors to access information related to and contained in these studies would economically harm the Company in that competitors would be able to benefit from the information and analysis contained in the studies without similarly being required to expend similar resources for the analysis and intelligence.

The trade secret portions of the Information are subject to substantial procedures to maintain their secrecy. Only select Georgia Power and Southern Company personnel are granted access to the trade secret portions of the Information. Those personnel receive access only on a "need to know" basis. Parties outside Georgia Power and Southern Company affiliates and their legal counsel who have been granted access to the trade secret portions of the Information, if any, have been required to sign confidentiality agreements.

Jeffrey R. Grubb, first being duly sworn, deposes and states that he has reviewed Technical Appendix Volume 2 of the Company's 2025 IRP and that to the best of his knowledge the specific information designated as trade secret constitute trade secrets in accordance with O.C.G.A. § 10-1-761 (2021).

Jeffrey R. Grubb  
Director, Resource Policy & Planning  
Georgia Power Company
