"Re: Georgia Power Company's Electric Transportation Reporting Compliance Filing; Docket No. 44280

Dear Ms. Tanner:

In accordance with the Georgia Public Service Commission's Order Adopting Settlement Agreement as Modified (the "Order") in Docket No. 44280, enclosed for filing is Georgia Power Company's 2023 Electric Transportation Program Summary Report. This annual report is being provided in compliance with paragraph 32 of the Order.

If you have any questions, please contact Steven Huling at 404-506-1366.

Sincerely,

/s/ Jeremiah Haswell

Georgia Power Company

Electric Transportation

2024 Summary Report

April 18, 2025

In accordance with the Georgia Public Service Commission's ("Commission") Final Order of Docket No. 44280, signed December 30, 2022, Georgia Power Company ("Georgia Power" or the "Company") provides this report.

Make Ready Program

Georgia Power's Make Ready Program is designed to reduce cost barriers for business customers seeking to install electric vehicle chargers that benefit the public good, thus helping to address the growing demands for electric transportation ("ET") solutions. The program allows Georgia Power to support its customers' adoption of electric vehicle charging solutions by allowing the Company to design, own, install, and maintain electric vehicle charging infrastructure from behind the customer's meter, up to, but not including the electric vehicle charger. The program requires participating customers to install at least six (6) Level 2 Chargers ("L2") or one (1) Direct Current Fast Charger ("DCFC"). Chargers can be dual port if at least six parking spaces are dedicated to ET charging.

In 2024, Georgia Power saw a steady number of Make Ready Program applications as compared to 2023. The retail segment is now the most active customer segment, accounting for 35% of applications submitted. Overall, Georgia Power received 175 applications in 2024 compared to 162 in 2023. These applications all move at various speeds through each stage of the process. Much depends on how far along customers are in becoming charging station owners and operators before they apply for the program and how long it takes for their internal approval processes. The number of submitted applications each year will always differ from the number of projects in construction and the number of completed installs due to varying project timelines. No application is rejected or denied unless they do not meet the program's qualifications, at which point it is cancelled.

Installation of chargers and infrastructure is a detailed and comprehensive process and, like most construction projects, takes time. Make Ready construction timelines depend on several factors, including, but not limited to, supply chain delays for the utility equipment needed to complete installations. For example, it can take up to 12 months of lead time when ordering transformers. Switchgear has also presented some lead time challenges. In 2024, the Company closed out 76 Make Ready projects and has carried over an additional 61 projects under construction and expected to be completed in 2025.

In 2024, The Company booked $8,253,829 for 153 Make Ready projects. This amount includes projects for which construction commenced prior to 2024, in addition to 76 projects that were closed out in 2024, and 61 projects that remained under construction at the end 2024. The 2024 Make Ready Capital Spend & Charger Counts by Project chart, on pages 4-7, is included showing capital spend by location. In total, these projects support adding 1,128 electric vehicle chargers (including a mix of L2 and DCFC) averaging about seven chargers per location, with a cost of approximately $7,300 per charger. The projects closed out in 2024 supported the addition of 628 chargers.

2024 Make Ready Program Summary	
Applications Received • Retail – 35% • Municipality – 25% • Commercial – 18% • Entertainment – 8%	175
Active Applications (current applications being worked)	177
Total Applications Cancelled*	194
Total Projects with 2024 Capital Investment	153
Applications with Completed Installations	76
Projects Under Construction at year end	61
L2 2024 Completed Installations/Total Ports for 2024 Capital Investment	570/987
DCFC 2024 Completed Installations/Total Ports for 2024 Capital Investment	58/141
Capital Spend	$8.25M
Average Spend per Charger	$7,317

***Covers applications submitted over multiple years**

Highlighted projects represent 76 closed locations in 2024.				
Negative capital spending generally reflects cancelled projects and removal from the program.				

2024 Make Ready Program Capital Investment by Month

Note: August corrected Community Chargers that were incorrectly booked to Make Ready in July.

2024 Make Ready Submitted Applications Status (175 Total)

Community Charging Program

Georgia Power's Community Charging Program is designed to support electric vehicle charging needs in underserved areas. In 2024, Georgia Power submitted eleven (11) locations for approval in the spring starting the 60-day right of first refusal process (ROFR). Five locations received a ROFR. The company filed to replace those five locations and those five along with the six from the first filing were approved for installation.

Georgia Power worked with property owners to obtain the rights to build and operate chargers at ten (10) sites, but we were unable to successfully locate a site host for one (1) site. Construction on the sites began in the 3rd quarter of 2024. All new community charging sites include two DC Fast Chargers (DCFC) and no level II chargers.

Georgia Power also performed site upgrades at existing Community Charging Program locations, which provided an increase in the kW output of chargers and improved the driver experience. Two (2) sites were upgraded.

The Community Charging location at 4045 Marietta Highway Canton GA 30114 was upgraded with new technology. The site consisted of a ChargePoint CPE250C-500-CCS1-CHD DCFC and a ChargePoint CT4020-HD-GW L2 prior to the upgrade. The upgrade added two CPE280-800-NA-1A3M2-3A1M2 DCFC chargers and is now capable of dispensing 160 kW output to a single vehicle or split power to charge two cars simultaneously. The CPE250C-500-CCS1-CHD DCFC removed from the Canton site was used to upgrade the community charging station located at 171 LakePoint Pkwy Cartersville GA 30121 from one (1) ChargePoint CPE250C-500-CCS1-CHD and (1) ChargePoint CT4020-HD-GW L2 to two (2) ChargePoint CPE250C-500-CCS1-CHD DCFC chargers and the station is now capable of dispensing 125 kW output to a single vehicle or split power to charge two cars simultaneously. The Company continues to evaluate the program and potential upgrade sites to improve the driver experience.

In 2024, Georgia Power booked $2,159,200.89 as capital expenses attributed to eleven (11) different projects, of which, $1,749,244.12 was for on new site construction. The remainder was booked as carry-over billing from prior year projects, which was necessary because construction and billing timelines do not always coincide within the same calendar year. The net revenue associated with Community Charging stations was $2,118,928.62 for 2024 which more than doubled 2023 revenue.

2024 Community Charging Program Summary	
GPC Community Charging Sites	83
Approved Sites: Dawson, Cedartown, Warm Springs, Folkston, Swainsboro, Lakeland, Montezuma, Franklin, Louisville, Millen, Lincolnton	11
Sites with Right of First Refusal (ROFR): Alma, Chatsworth, Jesup, Royston, Toccoa	5
Site Upgrades	2
Charger Pricing/kWh (L2/DCFC)	28¢ / 48¢
Idle Fee/Minute (DCFC)	40¢
Capital Spend	$2,159,200.89
Net Revenue from Stations	$ 2,118,928.62

ET Rebate Programs

Georgia Power's ET Rebate Programs are designed to help reduce cost barriers to customers seeking to adopt ET technologies. These programs are designed for both residential and business customers and include program specific requirements.

The total rebate budget authorized in the 2022 rate case was $6,700,000, which translates to approximately $2,250,000 per year, this included additional rebate dollars that were allocated as the Make Ready rebate, now called Business EV Charger Plus program.

The residential program rebate moved from $250 per charger to $150 in 2024. This change was due to the overwhelming response in 2023 which caused a pause in the rebate program. The residential rebate continued to see a steady increase in participation. A large portion of the increase can be contributed to the introduction of the "Instant Rebate" offered on the Georgia Power Marketplace, which makes up for almost 48% of the residential rebates. This instant rebate is immediately applied to the cost of the charger at check out and no additional action for getting the rebate is required.

The Residential Builders Rebate, which provides a rebate to builders who install electric vehicle plugs continues to be under utilized as many builders are either unaware or don't take the time to provide the necessary documentation.

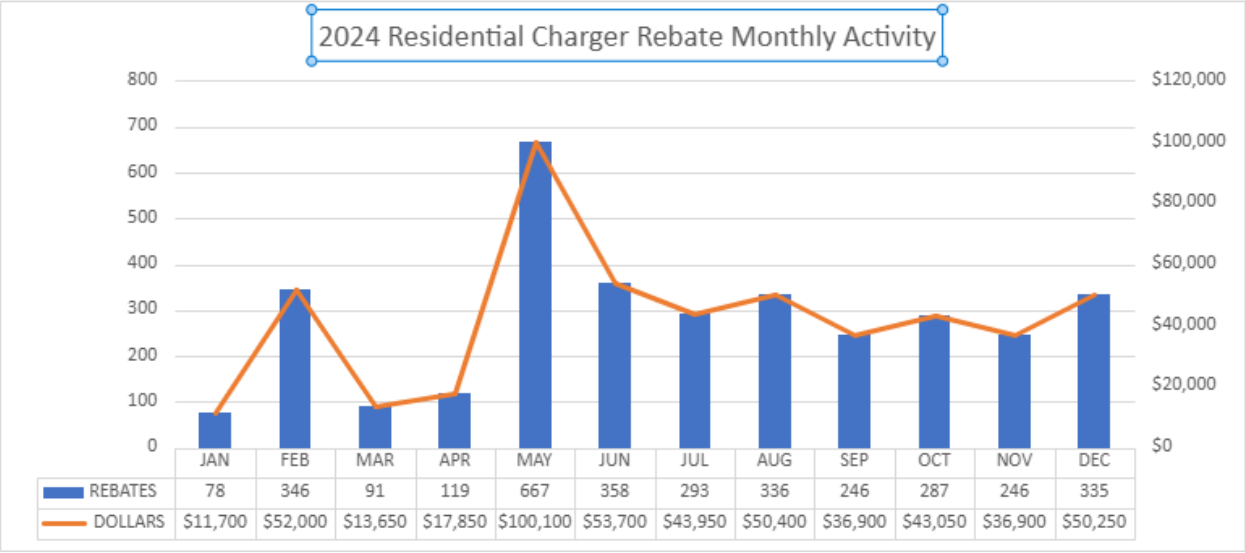

The Business Charger Rebate had a lower-than-expected participation rate, this was mainly contributed to the application portal not being available until the 2nd quarter, which is when the official roll-out took place. The program also had a pre-approval requirement which we eventually waived for 2024 installations to try and drive-up participation.

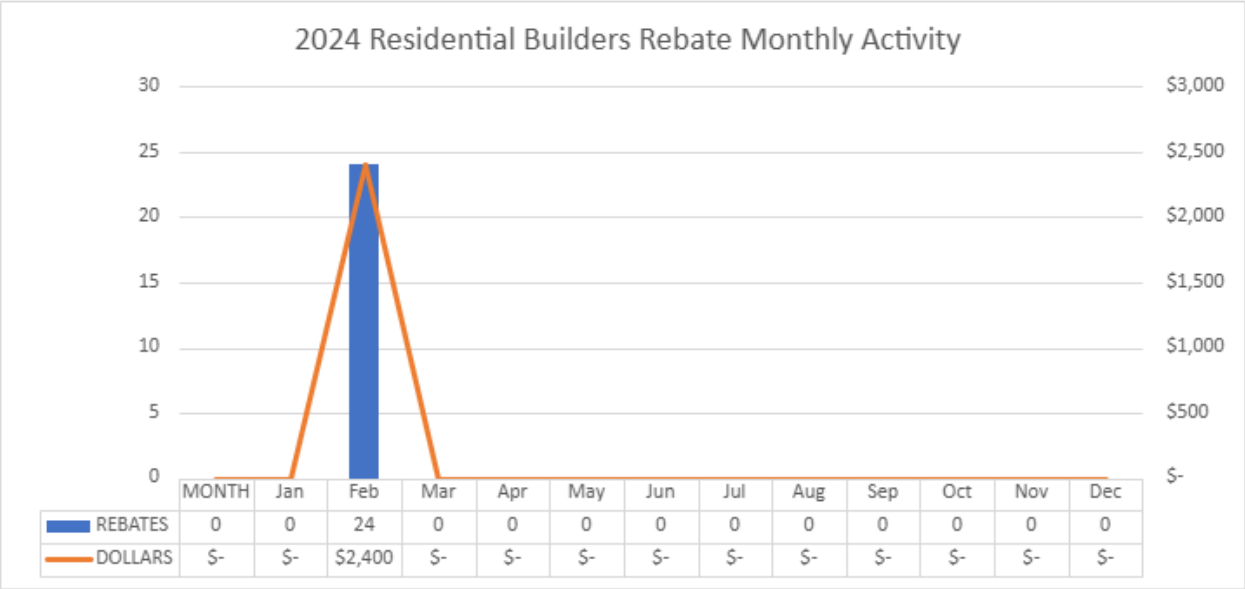

With the overall budget underspend, we made additional program changes in addition to waiving the pre-approval requirement, we also started allowing installers to submit applications on customers behalf to speed up the process

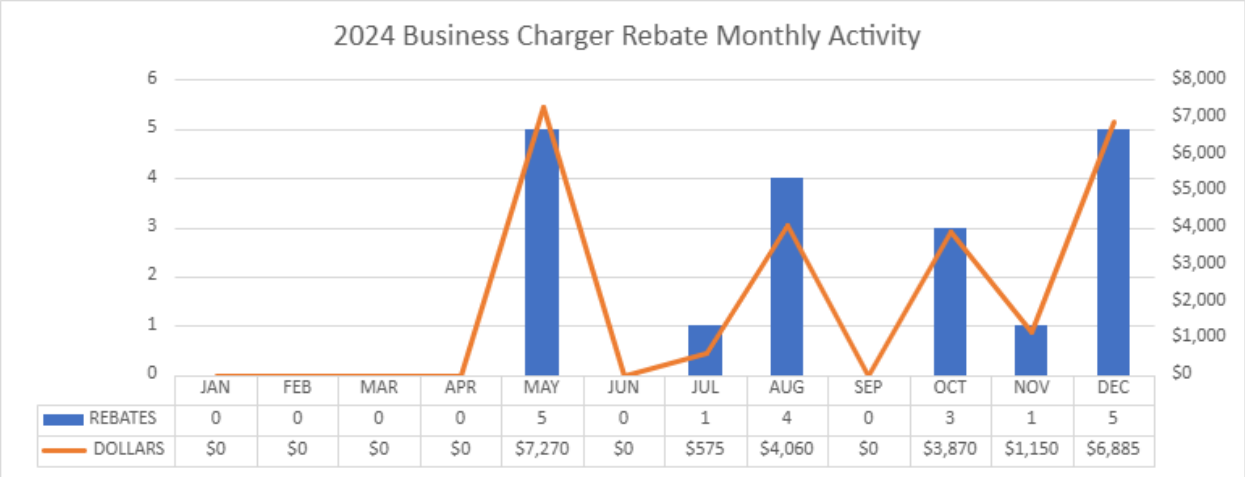

We spent the fourth quarter looking for opportunities to drive participation in the 2025 rebate program resulting in a simplification of the program by eliminating the different rebate Tiers and upping the spending cap per project. These changes were implemented in January of 2025.

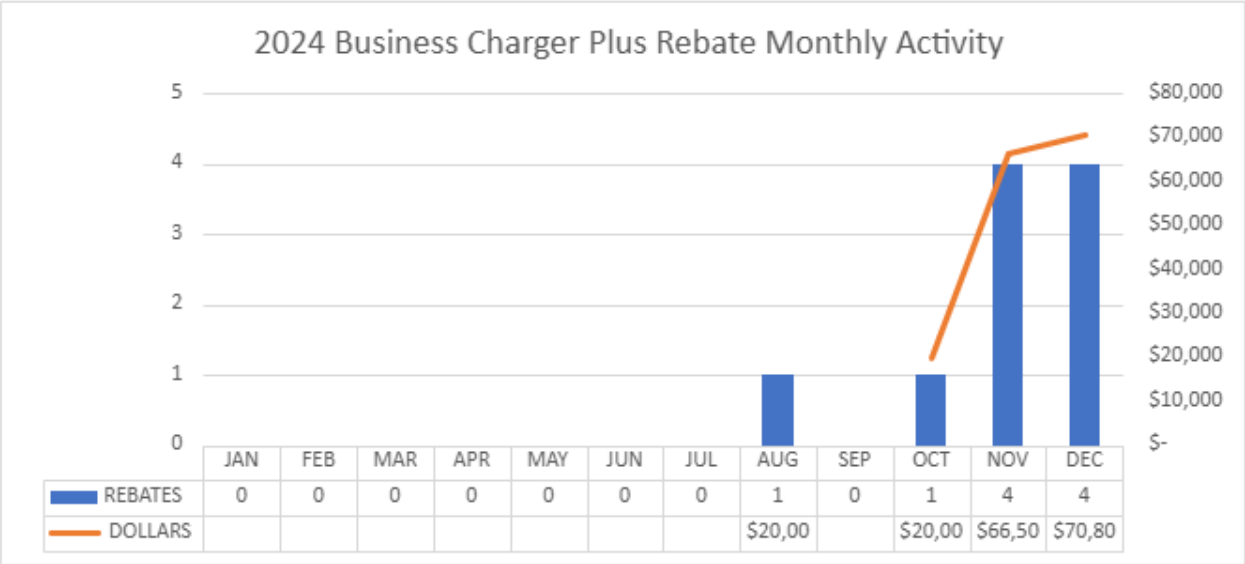

2024 ET Rebate Programs Summary				
	Budget	Rebate Amounts	Rebates	Spend
Residential Charger Rebate	$555K	$150	3402	$510,450
Residential Builders Rebate	$12K	$100	24	$2,400
Business Charger Rebate L2 (5 or less)	$79K	$50/kW	19	$23,810
Business Charger Plus Rebate L2(6 or more)/DCFC	$1.6M	$250/kW & $100/kW	10	$177,300

Note: Rebates and spend may not match due to spending caps and potential carry-overs.
