Rusty

I have been exchanging voicemails with Greg since Thursday.

I have not seen any other email traffic.

Scott

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the

Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct.

$200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

My colleague Will Whittington, cc'd, and I are going to be in Atlanta this week. We originally contacted several of the folks we've been working with to see if some or all of you are free for lunch in Covington on Wednesday? Nothing formal, just saying hello and sharing a meal.

My email has been getting reported as Spam by either Judy, Tres or both.

Please extend the invite to other team members.

Thanks.

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Scott and folks, would you estimate in-service timelines for the 1,300 and 1,600 mcf/hr upgrade scenarios?

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington,

Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Subject: FW: Serverfarm - City of Covington gas

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

From: Kevin Sorrow
Sent: Monday, August 4, 2025 11:34 AM
To: Joel Smith
Cc: Robert Barber

Joel,

Talked to Robert about the possibility of Serverfarm leasing the lot. He is ok with it, but we would like to know the timeline and benefits for the utilities complex. A few items that need to be considered are:

1. Timeline for moving in and how that impacts when we can use the facility fully.
2. Outside development that may influence our ability to use our current facilities. (Development on Alcovy that backs up to the peak shaving plant.)
3. Stormwater implications
4. Traffic implications. (GDOT and Traffic signal?)
5. Specifications for the parking lot.
6. We will need to make sure all utilities required in the parking lot are installed. Power, lights, fiber, water, stormwater, sewer.

If y'all think of any other concerns, please add them to the list. I do believe this could be beneficial to the complex, but we need to define.

Thank You,

Kevin Sorrow

Subject: FW: Serverfarm - City of Covington gas

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?

3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K

* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.
2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM

* Connect the new 12” gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12” gas main to the 8-inch diameter gas mains at Alcovy Rd.

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Mike,

Attached are draft copies of the facilities agreement and transportation agreement for your review. I am also including a spreadsheet showing annual revenues based on several different distribution margins. The transportation agreement has been vetted through OPS and I think is pretty much finished. As discussed, the facilities agreement and how the city would like to be handled the project cost should be vetted through the city attorney.

Hope this helps, but let me know if you need anything else.

Brandon,

Attached is a draft facilities agreement and NAESB for your review. For the draft facilities agreement, I know that the city will need to vet this through their team and get their city attorney's review and opinion. As Scott mentioned, we have some time on this, but we would handle the gas supply in a separate agreement.

After your review, let us know if you have any questions or would like to discuss.

Regards,

Rusty

Hey Scott, good morning. Checking on the document set to see when we could expect to see some of those. Some of the docs like NAESB and reimbursement agreement I think we could start reviewing even while we are still filling out some of the blanks.

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike Jewell, Director of Gas Utilities - City of Covington, is out-of-office/unavailable.

I've included Rob Leigh who is covering for Mike until he returns in late July.

Rob, see below. Thanks in advance for your help.

Jason Volk

VP - Acquisitions & Asset Mgmt.

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Morning Joel – Looking at our travel schedules I would like to move our meeting to the afternoon of the 30th. I realized I have to be in Atlanta proper for lunch on that day and it makes the most sense to drive to Covington after that. Hopefully that still works for you. I will update the meeting invite.

My main intent was to meet you and any other City employees while there. Meeting Tres would be great if he's available. I do want to chat about our 10835 Hazelbrand Rd site, and our other Covington site where we intend to work with MEAG. Permits for 10835 Hazelbrand Rd. is a topic I'd like to explore, particularly related our temp generations plant.

I will be bringing D'Avery Brown with me. He is our Project Manger for these projects.

We are also planning a site visit to 10835 Hazelbrand on Thursday at 9am if you were interested in attending. We can talk more about this when we meet.

Can you confirm your office is located at 2194 Emory St NW, Covington, Georgia 30014.

Thank you,

Brad Scheidt, PE

Subject: Re: Serverfarm Visit 7/30

Good morning, Brad,
Im actually wide open on the 30th. Are there any other utilities that you'd like to meet up with as well...gas, water, etc? Also, if interested, I could check the city manager's schedule if it'd be beneficial for you to meet him. Just let me know your thoughts.
Thanks,

Joel Smith
Electric Director
City of Covington

Hi Joel,

Per my voicemail, I'll be in Atlanta next week and would like to stop by and meet you and your team. I am available the morning of the 30th. Are you around then?

Thanks!

Hi Donna,

I hope you're doing well.

I wanted to follow up on our pre-application meeting last week to clarify the city's permit requirements and confirm which forms my team needs to submit. Please let me know if there are any additional steps or documentation we should be aware of.

Thank you for your time and support.

Best regards,

D'Avery Brown

Hi Scott, thanks for making time to connect last week. I wanted to relay my contact information and see if you or someone on your team had time to connect this week and dive into the system capacity and reliability details? Please let me know what works best for you all and I will accommodate. Thanks!

Greg Ford

I agree, they did look a bit out of sync with the cost. It's clearly stated below in #3, $1.1 MM for phase I and $11 MM for phase II to get to 700 MCF/HR.

I just wanted to circulate this to confirm what we all know - there is no misunderstanding our part. They clearly recognize the $11 million price tag in the email below.

They looked out of sync on our call this morning and I noticed that Brandon dropped off before we closed.

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington,

Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Jason and Brandon

Unfortunately we have missed the deadline to get this on the next Council agenda, so the next opportunity will be the August 4th meeting. The city is working with its team on both the facilities agreement and gas supply/gas rate for the project. In speaking with Mike, he felt like the city could have these items to you on or before July 28, so the city could meet the July 29 deadline for the August 4th meeting.

As soon as these documents are ready, we will forward for your review.

Regards,

Rusty

Subject: RE: Serverfarm

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Good Afternoon Mike, we had discussed developing a large load rate appropriate for this size of customer in advance of your 7/21 city council meeting. When can we get on the phone this week to talk about that?

Brandon

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

I just wanted to circulate this to confirm what we all know - there is no misunderstanding our part. They clearly recognize the $11 million price tag in the email below.

They looked out of sync on our call this morning and I noticed that Brandon dropped off before we closed.

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason and Brandon

Unfortunately we have missed the deadline to get this on the next Council agenda, so the next opportunity will be the August 4th meeting. The city is working with its team on both the facilities agreement and gas supply/gas rate for the project. In speaking with Mike, he felt like the city could have these items to you on or before July 28, so the city could meet the July 29 deadline for the August 4th meeting.

As soon as these documents are ready, we will forward for your review.

Regards,

Rusty

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Jason and Brandon

Unfortunately we have missed the deadline to get this on the next Council agenda, so the next opportunity will be the August 4th meeting. The city is working with its team on both the facilities agreement and gas supply/gas rate for the project. In speaking with Mike, he felt like the city could have these items to you on or before July 28, so the city could meet the July 29 deadline for the August 4th meeting.

As soon as these documents are ready, we will forward for your review.

Regards,

Rusty

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Mike –

Understood. We will not be adding additional impervious compared to what the existing stormwater facilities onsite is accounting for per the existing hydrology report.

Our primary concern is that this study with the as-built survey is going to take some time to complete. If this will hold up the LDP issuance, it may become a major timing issue for this project. If possible, we'd like to schedule a call with your team to fully understand what you need for this study, and what options we have to keep this going without impacting the construction schedule.

Thank you!

Chen,

We do not issue conditional permits. If the desire is to add impervious area outside what is existing this will need to be fully addressed during the review process.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

Chen Cai, P.E.

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Good morning, Mike, Audrey –

I would like to follow up with my email below. Could you please share the study with us so we could better understand and address the comments? Also, would it be possible to discuss this comment via a call or a teams meeting this week? Thanks!!

Best Regards,

_____

Mike, Audrey –

Thank you for getting back to us with the comments. On the first comment, you mentioned a post-development analysis was conducted by GWES dated December 3, 2024, and it revealed that the post-development design was raising concerns about potential downstream impacts. Could you please share this study with us, so we could take a look at it and better understand the situation?

Thank you!!

Best Regards,

_____

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Mike –

Understood. We will not be adding additional impervious compared to what the existing stormwater facilities onsite is accounting for per the existing hydrology report.

Our primary concern is that this study with the as-built survey is going to take some time to complete. If this will hold up the LDP issuance, it may become a major timing issue for this project. If possible, we'd like to schedule a call with your team to fully understand what you need for this study, and what options we have to keep this going without impacting the construction schedule.

Thank you!

Chen,

We do not issue conditional permits. If the desire is to add impervious area outside what is existing this will need to be fully addressed during the review process.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

_____

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Best Regards,

Chen Cai, P.E.

Good afternoon Chen,

Sorry about that. I have been in meetings most of the day.

As of yesterday we were still waiting on some reviewers to respond. We will check back on this again first thing in the morning and get your comments back to you tomorrow.

Michael Willis, CPESC

Good afternoon, Mike –

I hope you are doing well! I called you a few times today and left a voicemail. Could you provide me with an update on the review of this project? I also have a couple of questions that I would like to get some feedback from you if you have time for a quick talk. Let me know. Thank you!!

Best Regards,

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Subject: Serverfarm Margin Review

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike,

As requested, the attached spreadsheet and a pdf shows the three different annual use scenarios and proposed margins. This should give you a sense for the annual revenue potential at the different levels of annual use and various margins per Mcf. If you would like to see different revenue projections, just change the proposed distribution margins.

After you have had a chance to review and discuss with your team, let us know your thoughts. We can help put something together to present to Brandon Seale and his team from there.

Regards,

Mike –

Understood. We will not be adding additional impervious compared to what the existing stormwater facilities onsite is accounting for per the existing hydrology report.

Our primary concern is that this study with the as-built survey is going to take some time to complete. If this will hold up the LDP issuance, it may become a major timing issue for this project. If possible, we'd like to schedule a call with your team to fully understand what you need for this study, and what options we have to keep this going without impacting the construction schedule.

Thank you!

Best Regards,

Chen Cai, P.E.

Chen,

We do not issue conditional permits. If the desire is to add impervious area outside what is existing this will need to be fully addressed during the review process.

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

Chen Cai, P.E.

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Michael Willis, CPESC

Mike, Audrey –

Thank you for getting back to us with the comments. On the first comment, you mentioned a post-development analysis was conducted by GWES dated December 3, 2024, and it revealed that the post-development design was raising concerns about potential downstream impacts. Could you please share this study with us, so we could take a look at it and better understand the situation?

Thank you!!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Mike –

Understood. We will not be adding additional impervious compared to what the existing stormwater facilities onsite is accounting for per the existing hydrology report.

Our primary concern is that this study with the as-built survey is going to take some time to complete. If this will hold up the LDP issuance, it may become a major timing issue for this project. If possible, we'd like to schedule a call with your team to fully understand what you need for this study, and what options we have to keep this going without impacting the construction schedule.

Thank you!

Chen,

We do not issue conditional permits. If the desire is to add impervious area outside what is existing this will need to be fully addressed during the review process.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

_____

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Mike, Audrey –

Thank you for getting back to us with the comments. On the first comment, you mentioned a post-development analysis was conducted by GWES dated December 3, 2024, and it revealed that the post-development design was raising concerns about potential downstream impacts. Could you please share this study with us, so we could take a look at it and better understand the situation?

Thank you!!

Best Regards,

Chen Cai, P.E.

Chen,

We do not issue conditional permits. If the desire is to add impervious area outside what is existing this will need to be fully addressed during the review process.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

Chen Cai, P.E.

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Chen,

We do not issue conditional permits. If the desire is to add impervious area outside what is existing this will need to be fully addressed during the review process.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

Chen Cai, P.E.

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Mike, Audrey –

Thank you for getting back to us with the comments. On the first comment, you mentioned a post-development analysis was conducted by GWES dated December 3, 2024, and it revealed that the post-development design was raising concerns about potential downstream impacts. Could you please share this study with us, so we could take a look at it and better understand the situation?

Thank you!!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

Chen Cai, P.E.

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Mike, Audrey –

Thank you for getting back to us with the comments. On the first comment, you mentioned a post-development analysis was conducted by GWES dated December 3, 2024, and it revealed that the post-development design was raising concerns about potential downstream impacts. Could you please share this study with us, so we could take a look at it and better understand the situation?

Thank you!!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Best Regards,

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Thank you for sending this report! We will read it through and reach out if we have any questions.

Do you think it's possible to separate this from the LDP permitting process, or issue a conditional LDP approval after all the other comments are cleared? We will be working on this right away, but this will likely require a new as-built survey and therefore will take a long time to complete. We do not want this to create a major delay of the development or hold up the LDP process for our client.

Thank you for your help!!

Best Regards,

Chen Cai, P.E.

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Michael Willis, CPESC

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Attachments: Hazelbrand Road Annexation - Post-Development Analysis_Tech Memo_12-3-24.pdf

Chen,

The analysis conducted by our consultant is attached. Although it does indicate peak flow rates were addresses during the development, increased runoff volumes still have the potential to cause flooding issues. Especially related to the existing culvert under Hazelbrand Rd. For this reason and alteration or addition to existing impervious area will likely require further study analysis and could result in the need for additional measures to be installed.

Mike, Audrey –

Thank you for getting back to us with the comments. On the first comment, you mentioned a post-development analysis was conducted by GWES dated December 3, 2024, and it revealed that the post-development design was raising concerns about potential downstream impacts. Could you please share this study with us, so we could take a look at it and better understand the situation?

Thank you!!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Good morning, Mike –

Hope you had a great weekend! I would like to confirm that you have received the digital submission package below and have access to it. We have also mailed 2 physical copies along with the flashdisk over to you. It will be delivered by Fedex with a tracking number of 881740762153. Let us know if you need anything else.

Best Regards,

Chen Cai, P.E.

Jason and Brandon

Unfortunately we have missed the deadline to get this on the next Council agenda, so the next opportunity will be the August 4th meeting. The city is working with its team on both the facilities agreement and gas supply/gas rate for the project. In speaking with Mike, he felt like the city could have these items to you on or before July 28, so the city could meet the July 29 deadline for the August 4th meeting.

As soon as these documents are ready, we will forward for your review.

Regards,

Rusty

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

Mike,

As requested, the attached spreadsheet and a pdf shows the three different annual use scenarios and proposed margins. This should give you a sense for the annual revenue potential at the different levels of annual use and various margins per Mcf. If you would like to see different revenue projections, just change the proposed distribution margins.

After you have had a chance to review and discuss with your team, let us know your thoughts. We can help put something together to present to Brandon Seale and his team from there.

Hi Judy,

I just left you a VM on your office line. I wanted to give you an update on our progress with Mike and the greater gas team (CoC & MGAG). See below for email correspondence.

I also wanted to learn more about the upcoming hearing on 7/21 as it relates to our effort to secure the gas supply needed for our future data center.

Please give me a call back or let me know when you can jump on a quick call.

As always, thank you for your help.

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Jason,

There may be some confusion concerning MEAG Power's policy pertaining to transmission improvements to serve proposed large loads. At the City's request, MEAG Power prepared an estimated cost pertaining to the construction of two new 230kV transmission lines and the cost for constructing a related distribution substation. The cost estimate was preliminary and subject to change. MEAG Power does not intend to move forward with these proposed improvements unless and until the City and your company enter into a retail contract for purchase of electric power from the City based upon negotiated terms and conditions. It is our understanding that the City and your company have not entered into such an arrangement at the current time. Accordingly, MEAG Power is not currently taking any additional action with respect to this proposed project. If such a contract is entered into, the next steps are outlined in the HDL policy adopted by the MEAG Board (a copy of which is attached).

I trust the foregoing is response to your information request.

Pete

Message originated outside MEAG Power. Inspect closely before clicking links or attachments.

MEAG team,

I hope everyone enjoyed a wonderful 4th of July weekend.

I'm following up to see if you can provide a term sheet that provides more detail about the costs associated with the customer responsibility for the planned substation located along Elks Club Rd. The MEAG Project Scope Document for this location is attached for reference.

Thanks for your help.

Jason,

There may be some confusion concerning MEAG Power's policy pertaining to transmission improvements to serve proposed large loads. At the City's request, MEAG Power prepared an estimated cost pertaining to the construction of two new 230kV transmission lines and the cost for constructing a related distribution substation. The cost estimate was preliminary and subject to change. MEAG Power does not intend to move forward with these proposed improvements unless and until the City and your company enter into a retail contract for purchase of electric power from the City based upon negotiated terms and conditions. It is our understanding that the City and your company have not entered into such an arrangement at the current time. Accordingly, MEAG Power is not currently taking any additional action with respect to this proposed project. If such a contract is entered into, the next steps are outlined in the HDL policy adopted by the MEAG Board (a copy of which is attached).

I trust the foregoing is response to your information request.

Pete

Message originated outside MEAG Power. Inspect closely before clicking links or attachments.

MEAG team,

I hope everyone enjoyed a wonderful 4th of July weekend.

I'm following up to see if you can provide a term sheet that provides more detail about the costs associated with the customer responsibility for the planned substation located along Elks Club Rd. The MEAG Project Scope Document for this location is attached for reference.

Thanks for your help.

Jason Volk

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Good afternoon Chen,

Sorry about that. I have been in meetings most of the day.

As of yesterday we were still waiting on some reviewers to respond. We will check back on this again first thing in the morning and get your comments back to you tomorrow.

Michael Willis, CPESC

Good afternoon, Mike –

I hope you are doing well! I called you a few times today and left a voicemail. Could you provide me with an update on the review of this project? I also have a couple of questions that I would like to get some feedback from you if you have time for a quick talk. Let me know. Thank you!!

Best Regards,

Chen Cai, P.E.

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Jason,

There may be some confusion concerning MEAG Power's policy pertaining to transmission improvements to serve proposed large loads. At the City's request, MEAG Power prepared an estimated cost pertaining to the construction of two new 230kV transmission lines and the cost for constructing a related distribution

substation. The cost estimate was preliminary and subject to change. MEAG Power does not intend to move forward with these proposed improvements unless and until the City and your company enter into a retail contract for purchase of electric power from the City based upon negotiated terms and conditions. It is our understanding that the City and your company have not entered into such an arrangement at the current time. Accordingly, MEAG Power is not currently taking any additional action with respect to this proposed project. If such a contract is entered into, the next steps are outlined in the HDL policy adopted by the MEAG Board (a copy of which is attached).

I trust the foregoing is response to your information request.

Pete

Jason,

On behalf of the City of Covington, I sincerely apologize for the lack of communication from MEAG. I sent them an email earlier today expressing my disappointment (anger) with them. I have asked that you have an answer to your request today. Hopefully, we'll hear something soon from them.

Joel Smith

MEAG team,

I hope everyone enjoyed a wonderful 4th of July weekend.

I'm following up to see if you can provide a term sheet that provides more detail about the costs associated with the customer responsibility for the planned substation located along Elks Club Rd. The MEAG Project Scope Document for this location is attached for reference.

Thanks for your help.

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Good afternoon Chen,

Sorry about that. I have been in meetings most of the day.

As of yesterday we were still waiting on some reviewers to respond. We will check back on this again first thing in the morning and get your comments back to you tomorrow.

Michael Willis, CPESC

Good afternoon, Mike –

I hope you are doing well! I called you a few times today and left a voicemail. Could you provide me with an update on the review of this project? I also have a couple of questions that I would like to get some feedback from you if you have time for a quick talk. Let me know. Thank you!!

Best Regards,

Good Morning,

Please find the invoice attached for payment. The application has been processed and the plan review is due 7-4-25. If you wish to avoid the 2.95% convenience fee, you are welcome to pay in person or mail a check.

Thanks,

Michael Willis, CPESC

Message originated outside MEAG Power. Inspect closely before clicking links or attachments.

Holly,

Serverfarm, along with the City of Covington, is growing increasingly frustrated and disappointed with the continued lack of response from MEAG regarding our customer's request.

Serverfarm has already purchased one property within the city limits, which will be served by Covington Utilities. However, the property falls within Georgia Power's territory and will be served by them instead. I'm concerned that if we're unable to offer some form of response or engagement soon, we risk losing the opportunity to serve them at this new location that is in our territory entirely.

Please escalate this to the appropriate parties as soon as possible. I intend to respond to Mr. Volk later today and would appreciate having some direction or update to include in that communication.

Feel free to call me if we need to discuss further.

Joel

Jason,
Did anyone from MEAG ever get back with you?

Joel Smith
Electric Director
City of Covington

MEAG team,

I hope everyone enjoyed a wonderful 4th of July weekend.

I'm following up to see if you can provide a term sheet that provides more detail about the costs associated with the customer responsibility for the planned substation located along Elks Club Rd. The MEAG Project Scope Document for this location is attached for reference.

Thanks for your help.

Jason Volk

VP - Acquisitions & Asset Mgmt.

MEAG team,

Thanks again for your time on the call a couple of weeks ago.

Please provide a term sheet associated with the attached project scope document so that we can continue to evaluate this project.

Thank you for your assistance.

Good Day Gentlemen,

ServerFarm has asked for a meeting (Zoom) primarily with the building department team next Wednesday – so I am not inviting the entire team Engineering does when doing the Pre-Con meetings. I am setting that up now & am sending an invite to the both of you. Just as a heads up and in case you had interest in the redesign of the structure. I leave it up to you to determine if you want to login.

Regards,

Judy

Good Day Serverfarm Team,

Below is the link to the Zoom meeting next Wednesday, 07/16/2025, at 11 a.m. Eastern Time to discuss the building remodel/construction for the building at 10835 Hazelbrand Rd. Please invite anyone you would like to have in this meeting. I have invited our building & fire team as well as a couple of other departments to try and cover all bases for construction. I have also sent a calendar invite but was not sure everyone used the same email calendar. If you do not receive it via Outlook, please add the meeting below to your schedule.

Please let me know if you have any questions,

Judy

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Gravel is considered impervious area with the applicable CN Is it possible to add gravel area on site without reworking the pond? It depends on the amount of gravel (Impervious) added. Per our ordinance redevelopment resulting in more than 5000 sq ft of additional impervious will require H&H analysis and could result in modification of the pond.
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area. As long as the reconfiguration results in a net zero you will not need to address stormwater components. Any additional impervious generated will be held to the same statement above. You will however, need to follow any applicable regulations for ES&PC during the construction

Please advise. Thank you for your help!

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Good Morning,

Please find the invoice attached for payment. The application has been processed and the plan review is due 7-4-25. If you wish to avoid the 2.95% convenience fee, you are welcome to pay in person or mail a check.

Thanks,

Michael Willis, CPESC

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Gravel is considered impervious area with the applicable CN Is it possible to add gravel area on site without reworking the pond? It depends on the amount of gravel (Impervious) added. Per our ordinance redevelopment resulting in more than 5000 sq ft of additional impervious will require H&H analysis and could result in modification of the pond.
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area. As long as the reconfiguration results in a net zero you will not need to address stormwater components. Any additional impervious generated will be held to the same statement above. You will however, need to follow any applicable regulations for ES&PC during the construction

Please advise. Thank you for your help!

Best Regards,

Chen Cai, P.E.

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Gravel is considered impervious area with the applicable CN Is it possible to add gravel area on site without reworking the pond? It depends on the amount of gravel (Impervious) added. Per our ordinance redevelopment resulting in more than 5000 sq ft of additional impervious will require H&H analysis and could result in modification of the pond.
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area. As long as the reconfiguration results in a net zero you will not need to address stormwater components. Any additional impervious generated will be held to the same statement above. You will however, need to follow any applicable regulations for ES&PC during the construction

Please advise. Thank you for your help!

Best Regards,

Chen Cai, P.E.

Good afternoon Chen,

Sorry about that. I have been in meetings most of the day.

As of yesterday we were still waiting on some reviewers to respond. We will check back on this again first thing in the morning and get your comments back to you tomorrow.

Michael Willis, CPESC

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Gravel is considered impervious area with the applicable CN Is it possible to add gravel area on site without reworking the pond? It depends on the amount of gravel (Impervious) added. Per our ordinance redevelopment resulting in more than 5000 sq ft of additional impervious will require H&H analysis and could result in modification of the pond.
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area. As long as the reconfiguration results in a net zero you will not need to address stormwater components. Any additional impervious generated will be held to the same statement above. You will however, need to follow any applicable regulations for ES&PC during the construction

Please advise. Thank you for your help!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Good Morning,

Please find the invoice attached for payment. The application has been processed and the plan review is due 7-4-25. If you wish to avoid the 2.95% convenience fee, you are welcome to pay in person or mail a check.

Thanks,

Michael Willis, CPESC

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Thanks Sam,

I will get a Zoom meeting invite sent out today for 11 a.m. next Wednesday, 07/22/2025. I will include all who may have comments on the building remodel/construction.

Kind regards,

Judy

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Thanks Sam,

I will get a Zoom meeting invite sent out today for 11 a.m. next Wednesday, 07/22/2025. I will include all who may have comments on the building remodel/construction.

Kind regards,

Judy

Hi Judy,

I'll leave that determination with you, but our project definitely seems to be a straightforward building department project. If there is value in having more eyeballs on and awareness of our plans, anyone in the office is welcome.

Thanks!

Sam Brown

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Hi Judy,

I hope you had a great July 4th weekend. I wanted to quickly follow up to see if you wanted my team to send the Teams invite for the 16th or your team would be sending it. Either way works.

Thanks.

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Judy Thagard

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Best Regards,

Chen Cai, P.E.

Good afternoon Chen,

Sorry about that. I have been in meetings most of the day.

As of yesterday we were still waiting on some reviewers to respond. We will check back on this again first thing in the morning and get your comments back to you tomorrow.

Michael Willis, CPESC

Good afternoon, Mike –

I hope you are doing well! I called you a few times today and left a voicemail. Could you provide me with an update on the review of this project? I also have a couple of questions that I would like to get some feedback from you if you have time for a quick talk. Let me know. Thank you!!

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Judy Thagard

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Sam Brown

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

I'll leave that determination with you, but our project definitely seems to be a straightforward building department project. If there is value in having more eyeballs on and awareness of our plans, anyone in the office is welcome.

Thanks!

Sam Brown

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

+ D'Avery

Hi Judy,

We circled up with our design team and it sounds like the morning of July 16th will work best for our teams. If you send the pre-app Teams invite to D'Avery and I, we can send along to everyone.

Thanks!

Sam Brown

Chief Development Officer

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Thanks Sam,

I will get a Zoom meeting invite sent out today for 11 a.m. next Wednesday, 07/22/2025. I will include all who may have comments on the building remodel/construction.

Kind regards,

Judy

Hi Judy,

I'll leave that determination with you, but our project definitely seems to be a straightforward building department project. If there is value in having more eyeballs on and awareness of our plans, anyone in the office is welcome.

Thanks!

Sam Brown

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

We circled up with our design team and it sounds like the morning of July 16th will work best for our teams. If you send the pre-app Teams invite to D'Avery and I, we can send along to everyone.

Thanks!

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Sam Brown

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike,

As requested, the attached spreadsheet and a pdf shows the three different annual use scenarios and proposed margins. This should give you a sense for the annual revenue potential at the different levels of annual use and various margins per Mcf. If you would like to see different revenue projections, just change the proposed distribution margins.

After you have had a chance to review and discuss with your team, let us know your thoughts. We can help put something together to present to Brandon Seale and his team from there.

Regards,

From: Sam Brown <sam@sfrdc.com>

Hi Judy,

I'll leave that determination with you, but our project definitely seems to be a straightforward building department project. If there is value in having more eyeballs on and awareness of our plans, anyone in the office is welcome.

Thanks!

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

I hope you had a great July 4th weekend. I wanted to quickly follow up to see if you wanted my team to send the Teams invite for the 16th or your team would be sending it. Either way works.

Thanks.

+ D'Avery

Hi Judy,

We circled up with our design team and it sounds like the morning of July 16th will work best for our teams. If you send the pre-app Teams invite to D'Avery and I, we can send along to everyone.

Thanks!

Sam Brown

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

I'll leave that determination with you, but our project definitely seems to be a straightforward building department project. If there is value in having more eyeballs on and awareness of our plans, anyone in the office is welcome.

Thanks!

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Mike,

As requested, the attached spreadsheet and a pdf shows the three different annual use scenarios and proposed margins. This should give you a sense for the annual revenue potential at the different levels of annual use and various margins per Mcf. If you would like to see different revenue projections, just change the proposed distribution margins.

After you have had a chance to review and discuss with your team, let us know your thoughts. We can help put something together to present to Brandon Seale and his team from there.

Regards,

+ Brian, Tim, and D'Avery

Hi Kevin,

Thanks for the note verifying the city has capacity for our project. We're planning to apply for our permit shortly after our pre-app meeting next week and will work with your team to coordinate any and all details related to the water and sewer connections.

Talk soon.

Sam Brown

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Judy Thagard

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Hi Kevin,

Thanks for the note verifying the city has capacity for our project. We're planning to apply for our permit shortly after our pre-app meeting next week and will work with your team to coordinate any and all details related to the water and sewer connections.

Talk soon.

Sam Brown

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Best Regards,

_____

Thanks for the update, Mike!

I do have a couple of questions regarding the impervious area on site that I hope could get your input on:

* Would you consider gravel as pervious area or impervious area? Is it possible to add gravel area on site without reworking the pond?
* Would you be open to some minor adjustments of the parking lot on the west side of the site? We may want to change the shape of the pavement to better accommodate the GP substation area.

Please advise. Thank you for your help!

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Judy Thagard

?

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Judy Thagard

City of Covington | Planning & Development Director

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

At the end of the day the all-in delivered price is the most important factor, we're indifferent to doing it as a transport or a delivered-molecule deal. I had the impression that Covington's preference is to do it as a delivered molecule arrangement, and we're fine with that if it's still competitive with a transport option and defensible as such to our boards.

We have some examples of transport and delivered molecule deals with other utilities in other jurisdictions for this sized load, if helpful. I suspect that you and GAGA have some other good reference points as well.

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,

Mike

Good Afternoon Mike, we had discussed developing a large load rate appropriate for this size of customer in advance of your 7/21 city council meeting. When can we get on the phone this week to talk about that?

Brandon

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Good Morning,

Please find the invoice attached for payment. The application has been processed and the plan review is due 7-4-25. If you wish to avoid the 2.95% convenience fee, you are welcome to pay in person or mail a check.

Thanks,

Michael Willis, CPESC

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site’s key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Hi Sam,

Thanks for the follow up. I just checked and it had not been set on our side yet. Generally, we set it up so we can invite those on our team that need to be included. With that said, do you want the entire city team – civil and construction – or more the building side (i.e. fire & building). Please advise.

Regards,

Judy

Hi Judy,

I hope you had a great July 4th weekend. I wanted to quickly follow up to see if you wanted my team to send the Teams invite for the 16th or your team would be sending it. Either way works.

Thanks.

Hi Judy,

I hope you had a great July 4th weekend. I wanted to quickly follow up to see if you wanted my team to send the Teams invite for the 16th or your team would be sending it. Either way works.

Thanks.

Sam Brown

Chief Development Officer

+ D'Avery

Hi Judy,

We circled up with our design team and it sounds like the morning of July 16th will work best for our teams. If you send the pre-app Teams invite to D'Avery and I, we can send along to everyone.

Thanks!

Sam Brown

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site’s key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I’m sending along our design daily water consumption volume of 1,500 gallons. We can’t find

Kevin’s contact details on the website and I didn’t get his card. Would you mind forwarding this to him, please?

Thanks!

Hi Judy,

I hope you had a great July 4th weekend. I wanted to quickly follow up to see if you wanted my team to send the Teams invite for the 16th or your team would be sending it. Either way works.

Thanks.

+ D’Avery

Hi Judy,

We circled up with our design team and it sounds like the morning of July 16th will work best for our teams. If you send the pre-app Teams invite to D’Avery and I, we can send along to everyone.

Thanks!

Brandon,

Attached is a draft facilities agreement and NAESB for your review. For the draft facilities agreement, I know that the city will need to vet this through their team and get their city attorney’s review and opinion. As Scott mentioned, we have some time on this, but we would handle the gas supply in a separate agreement.

After your review, let us know if you have any questions or would like to discuss.

Regards,

Rusty

Hey Scott, good morning. Checking on the document set to see when we could expect to see some of those. Some of the docs like NAESB and reimbursement agreement I think we could start reviewing even while we are still filling out some of the blanks.

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Brandon,

Attached is a draft facilities agreement and NAESB for your review. For the draft facilities agreement, I know that the city will need to vet this through their team and get their city attorney's review and opinion. As Scott mentioned, we have some time on this, but we would handle the gas supply in a separate agreement.

After your review, let us know if you have any questions or would like to discuss.

Regards,

Rusty

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike Jewell, Director of Gas Utilities - City of Covington, is out-of-office/unavailable.

I've included Rob Leigh who is covering for Mike until he returns in late July.

Rob, see below. Thanks in advance for your help.

Jason Volk

VP - Acquisitions & Asset Mgmt.

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington,

Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Sam Brown

+ D'Avery

Hi Judy,

We circled up with our design team and it sounds like the morning of July 16th will work best for our teams. If you send the pre-app Teams invite to D'Avery and I, we can send along to everyone.

Thanks!

Sam Brown

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Sam Brown

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Good morning, Mike –

Hope you had a great weekend! I would like to confirm that you have received the digital submission package below and have access to it. We have also mailed 2 physical copies along with the flashdisk over to you. It will be delivered by Fedex with a tracking number of 881740762153. Let us know if you need anything else.

Best Regards,

Chen Cai, P.E.

Subject: RE: Serverfarm - Covington Data Center Water Volume Follow Up

Good Afternoon Sam,

Thank you for taking the time to meet with us today. I believe it was very beneficial for next steps. Thank you for providing the daily water consumption volume of 1,500 gallons. I have included Kevin in the response so you have his email address and can connect. Also included in the email is Mike Willis, Engineering Manager, who will be able to help with questions regarding land development and permitting for that.

We will set up the virtual pre-con meeting for Wednesday, July 16, 2025, and send out the invites. Would this be best to set up in the morning or afternoon? Please include Mike in the response as those meetings generally generate from his department. Also, based on our conversation earlier today, it would likely be best to involve the full city team—including Fire, Building/Planning, Utilities, Transportation, and Engineering—now that you have a more complete site plan, are starting to fill in your development/construction team, and have addressed many of the site's key requirements.

Again, it was a pleasure meeting with you and we look forward to working with you on this project.

Respectfully,

Judy

Hi Judy,

It was great to meet you today. Following up on our conversation, I'm sending along our design daily water consumption volume of 1,500 gallons. We can't find Kevin's contact details on the website and I didn't get his card. Would you mind forwarding this to him, please?

Thanks!

Good Morning,

Please find the invoice attached for payment. The application has been processed and the plan review is due 7-4-25. If you wish to avoid the 2.95% convenience fee, you are welcome to pay in person or mail a check.

Thanks,

Michael Willis, CPESC

Good morning, Mike –

I hope you had a wonderful weekend! I would like to follow up and see if you have everything you need to start the review of the package for this project, and when we should expect a response from the City.

Thanks!!

Best Regards,

Chen Cai, P.E.

Subject: RE: 10835 Hazelbrand Rd Data Center Conversion Project 1st Submittal

Sounds good. The physical copies should be there today. We have mailed out the flashdrive in a separate package, with a tracking number of 881769150770.

Best Regards,

Chen Cai, P.E.

Good morning, Mike –

Hope you had a great weekend! I would like to confirm that you have received the digital submission package below and have access to it. We have also mailed 2 physical copies along with the flashdisk over to you. It will be delivered by Fedex with a tracking number of 881740762153. Let us know if you need anything else.

Best Regards,

Chen Cai, P.E.

Brandon,

Attached is a draft facilities agreement and NAESB for your review. For the draft facilities agreement, I know that the city will need to vet this through their team and get their city attorney’s review and opinion. As Scott mentioned, we have some time on this, but we would handle the gas supply in a separate agreement.

After your review, let us know if you have any questions or would like to discuss.

Regards,

Rusty

Hey Scott, good morning. Checking on the document set to see when we could expect to see some of those. Some of the docs like NAESB and reimbursement agreement I think we could start reviewing even while we are still filling out some of the blanks.

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM

* Connect the new 12” gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco’s Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12” gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12” gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Brandon,

Attached is a draft facilities agreement and NAESB for your review. For the draft facilities agreement, I know that the city will need to vet this through their team and get their city attorney's review and opinion. As Scott mentioned, we have some time on this, but we would handle the gas supply in a separate agreement.

After your review, let us know if you have any questions or would like to discuss.

Regards,

Rusty

Hey Scott, good morning. Checking on the document set to see when we could expect to see some of those. Some of the docs like NAESB and reimbursement agreement I think we could start reviewing even while we are still filling out some of the blanks.

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington,

Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Brandon,

Attached is a draft facilities agreement and NAESB for your review. For the draft facilities agreement, I know that the city will need to vet this through their team and get their city attorney's review and opinion. As Scott mentioned, we have some time on this, but we would handle the gas supply in a separate agreement.

After your review, let us know if you have any questions or would like to discuss.

Rusty

Hey Scott, good morning. Checking on the document set to see when we could expect to see some of those. Some of the docs like NAESB and reimbursement agreement I think we could start reviewing even while we are still filling out some of the blanks.

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Rob,

Good morning. I understand that you work with Mike Jewel and that he is out of the office until mid-July.

As you know, we've been working with Mike on that important gas project for the 10835 Hazelbrand Rd site. Our friend Brandon Seale at VoltaGrid followed up with the broader MGAG team and City of Covington yesterday.

Can you be available for a call tomorrow? We plan to include our partner VoltaGrid on the call. We'd like to better understand the City's part in the gas supply process and to make sure we are aligned on all fronts as we work to complete the contracting for the gas supply to the property over the next 30 days. Please include any other team members at Covington as needed.

Please let us know if you can talk between 2pm and 4pm tomorrow (Friday).

Thank you.

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end,

specifically Joel Smith & Mike Jewell.

A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend. The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.

Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.

Thank you for your consideration. We look forward to your response.

Tracy, Salena,

I sent the email below to Judy requesting a meeting for Monday. I received her automatic email reply (attached) indicating that she will be out-of-office until Thursday, 6/26, and that we should contact you for assistance.

Please let us know if you can coordinate a meeting for Monday morning. It would be awesome if Greg could meet Judy and others when he is in town.
Thank you in advance for any help you can provide!

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end, specifically Joel Smith & Mike Jewell.
A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend. The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.
Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.
Thank you for your consideration. We look forward to your response.

Hi Jason & Greg,

I have reserved the conference room at city hall for 10 a.m. Monday. The physical address is 2194 Emory Street, Covington GA, 30014. Should you park in front of the building, when you enter the lobby turn to the customer service window to the left and let the front staff know you're here to see me.

While I'll return to the office tomorrow, my cell number is 404-922-6806 should you need anything.

We look forward to meeting with you,
Judy

Tracy, Salena,

I sent the email below to Judy requesting a meeting for Monday. I received her automatic email reply (attached) indicating that she will be out-of-office until Thursday, 6/26, and that we should contact you for assistance.

Please let us know if you can coordinate a meeting for Monday morning. It would be awesome if Greg could meet Judy and others when he is in town.
Thank you in advance for any help you can provide!

Subject: Serverfarm & City of Covington - meeting request

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end, specifically Joel Smith & Mike Jewell.
A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend. The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.
Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.
Thank you for your consideration. We look forward to your response.

Subject: Serverfarm & City of Covington - meeting request

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end, specifically Joel Smith & Mike Jewell.
A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend. The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.
Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.
Thank you for your consideration. We look forward to your response.

Jason Volk

Hey Scott, good morning. Checking on the document set to see when we could expect to see some of those. Some of the docs like NAESB and reimbursement agreement I think we could start reviewing even while we are still filling out some of the blanks.

Subject: RE: Serverfarm - City of Covington gas

This is very good news but believe the timeline may be aggressive in #1 given the Covington City Council will ultimately approve any documents. Mike or Rob can confirm but the earliest the Council could hear this is July 21st.

The construction critical path for #2 and #3 are achievable and will be driven by how quickly a reimbursement agreement can be completed. We will get a draft moving internally and get something back to you as soon as possible.

On #4 – we have some time but there are two scenarios – 1) You deliver your own gas supply to the Citygate and Covington re-delivers to the facility (Transportation service) or 2) You purchase a bundled delivered supply from Covington. We would prefer scenario 2 and will provide a quote to get the supply coupled with a delivery service to the city gate for comparison. This would be documented by a NAESB and related confirms.

If a third party delivers to the Covington Citygate (scenario 1), different agreements will be required to document imbalance cures, scheduling coordination, penalty remediation, etc.

We look forward to getting this project up and running.

Scott

Subject: RE: Serverfarm - City of Covington gas

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Tracy, Salena,

I sent the email below to Judy requesting a meeting for Monday. I received her automatic email reply (attached) indicating that she will be out-of-office until Thursday, 6/26, and that we should contact you for assistance.

Please let us know if you can coordinate a meeting for Monday morning. It would be awesome if Greg could meet Judy and others when he is in town.

Thank you in advance for any help you can provide!

Subject: Serverfarm & City of Covington - meeting request

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end, specifically Joel Smith & Mike Jewell.
A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend. The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.
Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.
Thank you for your consideration. We look forward to your response.

Tracy, Salena,

I sent the email below to Judy requesting a meeting for Monday. I received her automatic email reply (attached) indicating that she will be out-of-office until Thursday, 6/26, and that we should contact you for assistance.

Please let us know if you can coordinate a meeting for Monday morning. It would be awesome if Greg could meet Judy and others when he is in town.
Thank you in advance for any help you can provide!

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end, specifically Joel Smith & Mike Jewell.
A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend.
The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.
Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.
Thank you for your consideration. We look forward to your response.

Subject: Serverfarm & City of Covington - meeting request

Judy,
I left you a message on your office line.
I hope you are well. I met you briefly during one of the annexation meetings for the 10835 Hazelbrand Rd building. We've shared several emails.
Serverfarm is preparing to close our acquisition of the building over the next few months. We have spent a great deal of time and money designing and planning for a future state-of-the-art data center at that location. We have been working extensively with Georgia Power and your utility department to that end, specifically Joel Smith & Mike Jewell.
A Serverfarm executive named Greg Ford, cc'd, will be in town on Monday, May 30. He would very much like to meet with you and anyone else you recommend.
The meeting has two purposes: (1) say hello and continue building what we hope will be a very long and successful relationship with the City of Covington & (2) give you an update on where we are with our plans and what we are trying to accomplish.
Please let us know if you have availability on Monday morning. Greg's preferred time would be 10:00am at a location of your choice in Covington, but he can be flexible.
Thank you for your consideration. We look forward to your response.

Jason Volk

VP - Acquisitions & Asset Mgmt.

Good Morning Jason,

Hope you are doing well. Yes, we would love to meet with you on Monday morning. Would you like to meet at 9 or 10 a.m.?

Regards,
Judy

Judy Thagard

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Tracy, Salena,

I sent the email below to Judy requesting a meeting for Monday. I received her automatic email reply (attached) indicating that she will be out-of-office until Thursday, 6/26, and that we should contact you for assistance.

Please let us know if you can coordinate a meeting for ...
