@Judy Johnson <mailto:JudyJohnson@cityofcovington.org>

Happy Thursday! Would you please help Jenny with the question below for the building permit?

Hi Jenny,

I sent you a meeting invite and the info packet from the city.

Please let me know if I can be of further assistance.

Kind regards,

Audrey Payne

Hi,

Oh no, that is very frustrating!

28th 2pm then please!

Just so I can plan, I know you may not know but one of the permits I know we require is the building permit. How long does that usually take to pull if we have everything ready to go please?

Thanks,

Jenny Twentyman

Hi,

Just to double-check. Will these be over teams (online) or do I need to come to the office in Covington?

Thanks,

Jenny Twentyman

Good morning, Jenny.

If you would like to set up a pre-design Zoom meeting with the City of Covington, we have the following openings available.

Each Wednesday

9:00 am – 10:00 am

10:00 am -11:00 am

1:00 pm – 2:00 pm

2:00 pm – 3:00 pm

All city departments will attend the meeting including Engineering, Planning & Zoning, Transportation, Gas, Electric, Environmental and the Fire Marshall.

Please let me know what time works for you and your time.

Kind regards,

Audrey Payne

Good afternoon,

Thank you so much for your help earlier today.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Thanks,

Jenny Twentyman

Hi,

Oh no, that is very frustrating!

28th 2pm then please!

Just so I can plan, I know you may not know but one of the permits I know we require is the building permit. How long does that usually take to pull if we have everything ready to go please?

Thanks,

Jenny Twentyman

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Engineering Department is inviting you to a scheduled Zoom meeting.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Engineering Department is inviting you to a scheduled Zoom meeting.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Engineering Department is inviting you to a scheduled Zoom meeting.

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hi,

Oh no, that is very frustrating!

28th 2pm then please!
Just so I can plan, I know you may not know but one of the permits I know we require is the building permit. How long does that usually take to pull if we have everything ready to go please?

Thanks,

Jenny Twentyman

Good morning, Jenny.

If you would like to set up a pre-design Zoom meeting with the City of Covington, we have the following openings available.

Each Wednesday

9:00 am – 10:00 am

10:00 am -11:00 am

1:00 pm – 2:00 pm

2:00 pm – 3:00 pm

All city departments will attend the meeting including Engineering, Planning & Zoning, Transportation, Gas, Electric, Environmental and the Fire Marshall.

Please let me know what time works for you and your time.

Kind regards,

Audrey Payne

Good afternoon,

Thank you so much for your help earlier today.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Thanks,

Hi Audrey,

Thank you so much for getting back to me.

That's great, thank you. Do you have availability for tomorrow at 2pm please? And to confirm, that's EST sorry?

Thanks,

Jenny Twentyman

Project Manager

VoltaGrid LLC

Caution: EXTERNAL MESSAGE: Use Caution when opening attachments, clicking on links, or responding.

Good morning, Jenny.

If you would like to set up a pre-design Zoom meeting with the City of Covington, we have the following openings available.

Each Wednesday

9:00 am – 10:00 am

10:00 am -11:00 am

1:00 pm – 2:00 pm

2:00 pm – 3:00 pm

All city departments will attend the meeting including Engineering, Planning & Zoning, Transportation, Gas, Electric, Environmental and the Fire Marshall.

Please let me know what time works for you and your time.

Kind regards,

Audrey Payne

Good afternoon,

Thank you so much for your help earlier today.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Thanks,

Jenny Twentyman

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Good morning, Chen.

Happy Monday ??

My apologies but it looks like the holidays have delayed completion of your plan review. I'll follow up with the remaining reviewers today and should have an answer for you no later than Wednesday, December 3.

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Dear Audrey and Mike,

I am working with Chen on the Serverfarm project, and we would appreciate some time early next week to discuss LDP revisions.

Could you please share your availability on Monday or Tuesday?

Thanks!

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Ok, sounds good. We would like to discuss with the city about a fiber and gas connection to the west property line. Please see below the concept we are thinking of. We would like to talk to you about the LDP revision we will be working on for this primarily, but if you think anyone else would be beneficial, please invite them to the conversation as well. Thank you!!

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Ok, sounds good. We would like to discuss with the city about a fiber and gas connection to the west property line. Please see below the concept we are thinking of. We would like to talk to you about the LDP revision we will be working on for this primarily, but if you think anyone else would be beneficial, please invite them to the conversation as well. Thank you!!

Best Regards,

Chen Cai, P.E.

Hello Anirudh,

Yes, hard copy plans are required. Is there anyone else from the city's various utilities and properties that you would like to attend?

Kind regards,

Audrey

Dear Audrey and Mike,

I am working with Chen on the Serverfarm project, and we would appreciate some time early next week to discuss LDP revisions.

Could you please share your availability on Monday or Tuesday?

Thanks!

Subject: RE: Approved Land Disturbance Permit # P25-06-012 for 10835 Hazelbrand Rd

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Dear Audrey and Mike,

I am working with Chen on the Serverfarm project, and we would appreciate some time early next week to discuss LDP revisions.

Could you please share your availability on Monday or Tuesday?

Thanks!

Hi Chen,

Could you please wait until I receive the material? I’m unable to invoice without a complete submission.

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Dear Audrey and Mike,

I am working with Chen on the Serverfarm project, and we would appreciate some time early next week to discuss LDP revisions.

Could you please share your availability on Monday or Tuesday?

Thanks!

Good afternoon, Audrey –

Hope you enjoyed the Thanksgiving holiday!! I would like to follow up and see if we are able to get something back for this project today, or it will be early next week. Thank you!

Best Regards,

Chen Cai, P.E.

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Good morning, Chen.

Happy Monday ??

My apologies but it looks like the holidays have delayed completion of your plan review. I'll follow up with the remaining reviewers today and should have an answer for you no later than Wednesday, December 3.

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Good morning, Cai.

Your revised permit has been approved with comments (see attached).

Please let me know if you have any questions.

Thank you.

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Hi Mike,

We are in the process of identifying if the Southern Bell easement is still applicable, if no longer applicable we would like for the pipeline to run along that easement.

Thank you,

D'Avery Brown

Mike,

Looking at the easement they sent over, I added a markup questioning if the line noted is the Southern Bell easement and the gas easement will then be 20-ft beyond it. The pdf with the markup is attached. Just trying to clarify.

Also, is there a current set of development plans and maybe dwg files we could get our hands on for the Serverfarm site that we can use to incorporate into the gas main plans?

Thanks,

John G. Payne, P.E.

Subject: Right of Way

Hi Will,

I need to get an updated drawing that shows the Southern Bell easement that was mentioned in the call on Monday. We will need the gas easement staked for the gas main from the highway up to the meter location to see the extent of any clearing that will have to be completed for the installation of the service, as well as provide guidance for the installation contractor. I need to forward the drawing revisions to our Engineer so that he can address the additional Bell South easement in the design drawings for construction.

Thanks,

Mike

Keck & Wood, Inc. complies with Title VI of the Civil Rights Act of 1964 as amended and will afford minority firms the full and fair opportunity to submit a bid or a proposal and will not discriminate on the basis of race, color, or national origin in consideration for an award.

Good Morning,

Please see the attached agenda items needed from the Gas Department for the 1/20/26 Council Meeting. Some of the Contracts are still in the final revisions, but should be ready for the meeting. Let me know if you have ay questions.

Thanks,

Mike

Subject: Agenda Item Request form

Good Morning, Audra,

I need the current Agenda Item Request Form, please, for 2026. I have three items to submit (possibly 4):

* Utilities Complex Change Orders for Parkin and others.
* Ashtom Estates Agreement for gas installation.
* Transco Tap Reimbursement Agreement (Serverfarm)

Potential Reimbursement Agreement with Southern Company for an Engineering study for the Alcoy Road Project.

Thanks,

Mike

Mike,

Looking at the easement they sent over, I added a markup questioning if the line noted is the Southern Bell easement and the gas easement will then be 20-ft beyond it. The pdf with the markup is attached. Just trying to clarify.

Also, is there a current set of development plans and maybe dwg files we could get our hands on for the Serverfarm site that we can use to incorporate into the gas main plans?

Thanks,

John G. Payne, P.E.

Good morning, Jenny.

If you would like to set up a pre-design Zoom meeting with the City of Covington, we have the following openings available.

Each Wednesday

9:00 am – 10:00 am

10:00 am -11:00 am

1:00 pm – 2:00 pm

2:00 pm – 3:00 pm

All city departments will attend the meeting including Engineering, Planning & Zoning, Transportation, Gas, Electric, Environmental and the Fire Marshall.

Please let me know what time works for you and your time.

Kind regards,

Audrey Payne

Good afternoon,

Thank you so much for your help earlier today.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Thanks,

Subject: Agenda Item Request form

Good Morning, Audra,

I need the current Agenda Item Request Form, please, for 2026. I have three items to submit (possibly 4):

* Utilities Complex Change Orders for Parkin and others.
* Ashtom Estates Agreement for gas installation.
* Transco Tap Reimbursement Agreement (Serverfarm)

Potential Reimbursement Agreement with Southern Company for an Engineering study for the Alcoy Road Project.

Thanks,

Mike

Don,

What is the lead time on the meters we will need for the Serverfarm project? I need to get this into fabrication.

Thanks,

Mike

Good morning, Jenny.

If you would like to set up a pre-design Zoom meeting with the City of Covington, we have the following openings available.

Each Wednesday

9:00 am – 10:00 am

10:00 am -11:00 am

1:00 pm – 2:00 pm

2:00 pm – 3:00 pm

All city departments will attend the meeting including Engineering, Planning & Zoning, Transportation, Gas, Electric, Environmental and the Fire Marshall.

Please let me know what time works for you and your time.

Kind regards,

Audrey Payne

Good afternoon,

Thank you so much for your help earlier today.

Please see the site address below:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and what information is required from us to obtain these permits.

Thanks,

Jenny Twentyman

Subject: Transco Agreement

Will,

I wanted to let you know that we did receive the Transco Interconnect Reimbursement agreement yesterday. It has been forwarded to the city attorney for review and comments. Once he has completed his review, we will move forward with including this in the sales agreement between the city and Serverfarm.

Next, Mike thinks he will need to take this before City Council for approval, pending what the city attorney comes back with. From there, we will get with you on the $s and submitting the Interconnect Reimbursement to Transco.

Hope you have a great weekend!

Attachments: Invoice for November & December 2025.pdf; Meter 21273721 rent for October 2025.pdf; Meter 241956626 Invoice November & December 2025.pdf

Hey J.T.,

Happy Friday! Here are the invoices for the two hydrant meters at your job site. I sent an invoice for the rent for Hydrant Meter # 21273721. I think I forgot to send you an invoice for October's rent for this meter. Therefore, I am sending it to you now. Hydrant Meter 241956626 – the invoice is for rent & usage for November & December 2025. You sent me the readings for that meter. I hope I am not confusing you. Let me know if you have any questions.

Hey guys – thanks for letting me come by and visit today!

The attached article was actually released 12/19 but I didn't get around to reading it until last Friday.

I also attached the MEAG 101 – in addition to the project flowchart, there is a lot more detail in the presentation that we reviewed. Feel free to ask any questions at any time.

Also attached is the Annual Planning Transmission Report that I mentioned … I'll send over some February dates for you to consider where myself and Ali can visit to review and talk about your tying concerns, growth/need for new station, or upgrade, etc.

I think that is it for now…have a great rest of your week.

Best Regards,

Holly B.

Good morning, Chen.

Happy Monday ??

My apologies but it looks like the holidays have delayed completion of your plan review. I'll follow up with the remaining reviewers today and should have an answer for you no later than Wednesday, December 3.

Kind regards,

Audrey Payne

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Subject: New Facility - Permitting

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Good morning,

I hope you are well.

Apologies if I have emailed the wrong person. I have tried to contact Tracy Floyd a few times, who I believe is part of your team. I was given her contact from others in the City of Covington, but I have not had any response from her.

I am looking to get some guidance on the permitting requirements for a new site we are planning develop this year please.

Site address:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project and how to get started with the process of applying for these permit please?

Thank you so much in advance and I look forward to hearing from you.

You can use the Meeting Ticket number to check PRIS and see which members will and which will not attend the meeting. The day after the meeting the GA811 Online Ticketing System will generate the Excavation Ticket. The Excavation Ticket will have a different number than the Meeting Ticket. The Excavation Ticket will be emailed to the caller email address listed. The Excavation Ticket will show the expiration date and the update window. The update window will start 5 business days before the expiration and end at 4:30 pm on the expiration date. The expiration date may be on a holiday or on a weekend. The Excavation Ticket MUST be updated by 4:30 pm (when our system switches to the next business day) on the expiration date. After 4:30pm on the expiration date you will be required to enter a new Large Project. Bring proposed marking agreements to the meeting for each of the members listed and for yourself. Failure to bring marking agreements may result in the cancellation of your ticket. Sample marking agreements may be found on the Georgia811 website. https://lpform.geocall.ga811.com/5e13e5bd-994c-4839-9dff-8118258da0ec Best time to call: 8:00 AM to 5:00 PM

Will and Mike,

I will be on PTO this week and unable to attend. I have nothing else to add to what I shared Thursday regarding the agreements. Once I have consensus from our team regarding Serverfarm edits to the sales agreement, I will forward comments and updated agreement.

Hope everyone has a Merry Christmas!

Rusty

Subject: Request for comment on proposed VoltaGrid generation facility in Covington - Drew Kann (AJC)

Hi Audra,

My name is Drew Kann and I'm a reporter with The Atlanta Journal-Constitution. I'm writing a story on a new power generation facility from a company called VoltaGrid, which is seeking permits from the state of Georgia to operate near Covington. The VoltaGrid facility will provide around-the-clock power to a data center being developed nearby by Serverfarm at 10835 Hazelbrand Road. I've attached a copy of the company's air permit application submitted to the Georgia Environmental Protection Division.

I wanted to reach out to see if the city of Covington's mayor or any members of city council have any thoughts or concerns about this facility. Below are a few questions I was hoping they could respond to. If they're able to get back to me with any responses by EOD today, that would be greatly appreciated.

* The proposed VoltaGrid facility is seeking permits to use a fleet of gas-burning generators operating around the clock to power a data center. Does the city or city council have any concerns about the proposal?

* Environmental experts I've spoken say they have concerns about the impacts this facility will have on local air quality and noise. Given that there are residential areas near the site, does the city share any of these concerns?

Thanks,

Drew

All,

Please see the attached edit sales agreement I received last evening from Serverfarm. You will that they have reduced the term of the agreement from 27 months to 19 months and increased the hourly and daily volumes request. I have reviewed and have added comments.

Would you review and let me know your thoughts. If you have any questions, let me know.

Thanks,

Hi Mike,

Picking back up from our previous email, I noticed that the Performance Covenant template you shared includes an Exhibit B stating, “Completion of final paving in accordance with the approved subdivision plans.” Could you please provide further clarification on this item, or, if available, forward the approved subdivision plans being referenced?

Additionally, could you forward the Maintenance Bond template as well?

Let me know if you have any questions.

Thank you,

Subject: RE: Hazelbrand Road - Maintenance Bond

Erick,

Actually, The should be a maintenance bond and performance covenant. When installing, or in this case re-locating, city owned infrastructure, the developer is responsible to maintain the new infrastructure for three years and has to file a covenant agreement on record for their responsibility of said maintenance.

Since the bond and covenant were originally provided by the former property owner the new owner must provide their own bond and covenant once the property is sold.

Hi Mike,

I look forward to working with you to complete this outstanding item. To confirm my understanding, are the terms “Maintenance Covenant” and “Performance Covenant” being used interchangeably to refer to the template previously shared?

As the new owner, we’re being diligent in obtaining a copy, as it’s important that we review the obligations previously agreed upon to properly assess and finalize the agreement the County is requiring us to provide.

Thank you,

Good Afternoon Michael,

I have attached a string of emails to help refresh your memory on our project. I have also attached the Maintenance Bond and Calculation spreadsheet that was used when we originally worked with you to put the bond in place.

I have also copied Jason Volk to this email. We are in the process of selling the building to Jason's team. They are needing some additional information regarding the bond as they will be replacing our bond after purchasing the property.

I will let you guys take it from here but wanted to make the introduction.
Thank you,

Kevin

Subject: New Facility - Permitting Requirements

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Good afternoon,

I hope you are well.

I am looking to get some guidance on the permitting requirements for a new site we are planning develop next year please.

Site address:

10835 Hazelbrand Road NE

Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project.

Thank you so much in advance and I look forward to hearing from.

Kind regards,

Jenny Twentyman

Hi Mike,

Picking back up from our previous email, I noticed that the Performance Covenant template you shared includes an Exhibit B stating, “Completion of final paving in accordance with the approved subdivision plans.” Could you please provide further clarification on this item, or, if available, forward the approved subdivision plans being referenced?

Additionally, could you forward the Maintenance Bond template as well?

Let me know if you have any questions.

Thank you,

From: Mike Willis <MWillis@cityofcovington.org>

Subject: RE: Hazelbrand Road - Maintenance Bond

Erick,

Actually, The should be a maintenance bond and performance covenant. When installing, or in this case re-locating, city owned infrastructure, the developer is responsible to maintain the new infrastructure for three years and has to file a covenant agreement on record for their responsibility of said maintenance.

Since the bond and covenant were originally provided by the former property owner the new owner must provide their own bond and covenant once the property is sold.

Hi Mike,

I look forward to working with you to complete this outstanding item. To confirm my understanding, are the terms “Maintenance Covenant” and “Performance Covenant” being used interchangeably to refer to the template previously shared?

As the new owner, we’re being diligent in obtaining a copy, as it’s important that we review the obligations previously agreed upon to properly assess and finalize the agreement the County is requiring us to provide.

Thank you,

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Good Afternoon Michael,

I have attached a string of emails to help refresh your memory on our project. I have also attached the Maintenance Bond and Calculation spreadsheet that was used

when we originally worked with you to put the bond in place.

I have also copied Jason Volk to this email. We are in the process of selling the building to Jason's team. They are needing some additional information regarding the bond as they will be replacing our bond after purchasing the property.

I will let you guys take it from here but wanted to make the introduction.
Thank you,

Kevin

Subject: Request for comment on proposed VoltaGrid generation facility in Covington - Drew Kann (AJC)

Hi Audra,

My name is Drew Kann and I'm a reporter with The Atlanta Journal-Constitution. I'm writing a story on a new power generation facility from a company called VoltaGrid, which is seeking permits from the state of Georgia to operate near Covington. The VoltaGrid facility will provide around-the-clock power to a data center being developed nearby by Serverfarm at 10835 Hazelbrand Road. I've attached a copy of the company's air permit application submitted to the Georgia Environmental Protection Division.

I wanted to reach out to see if the city of Covington's mayor or any members of city council have any thoughts or concerns about this facility. Below are a few questions I was hoping they could respond to. If they're able to get back to me with any responses by EOD today, that would be greatly appreciated.

* The proposed VoltaGrid facility is seeking permits to use a fleet of gas-burning generators operating around the clock to power a data center. Does the city or city council have any concerns about the proposal?
* Environmental experts I've spoken say they have concerns about the impacts this facility will have on local air quality and noise. Given that there are residential areas near the site, does the city share any of these concerns?

Thanks,

Drew

Subject: Request for comment on proposed VoltaGrid generation facility in Covington - Drew Kann (AJC)

Hi Audra,

My name is Drew Kann and I'm a reporter with The Atlanta Journal-Constitution. I'm writing a story on a new power generation facility from a company called VoltaGrid, which is seeking permits from the state of Georgia to operate near Covington. The VoltaGrid facility will provide around-the-clock power to a data center being developed nearby by Serverfarm at 10835 Hazelbrand Road. I've attached a copy of the company's air permit application submitted to the Georgia Environmental Protection Division.

I wanted to reach out to see if the city of Covington's mayor or any members of city council have any thoughts or concerns about this facility. Below are a few questions I was hoping they could respond to. If they're able to get back to me with any responses by EOD today, that would be greatly appreciated.

* The proposed VoltaGrid facility is seeking permits to use a fleet of gas-burning generators operating around the clock to power a data center. Does the city or city council have any concerns about the proposal?
* Environmental experts I've spoken say they have concerns about the impacts this facility will have on local air quality and noise. Given that there are residential areas near the site, does the city share any of these concerns?

Thanks,

Drew

Good afternoon:

I spoke with Mayor Baggett and she stated VoltaGrid has not contacted mayor or council members regarding their facility or permit.

Thanks,

Audra M. Gutierrez, GMCA-MMC, IIMC-CMC

Hi Christine, Rusty,

Could we meet tomorrow or Friday to review latest? We want to make sure we do not let any more time slip. Let me know what times work and we can accomodate.

Thanks
Will

Hi Rusty,

Here is where I would start and then have follow ups based on their responses.

1. The new estimate is roughly the same as the prior estimate that had 2x the throughput...why? There has been a month of review and has come back with about the same $$.

2. Confirm this is to take system meter up to 1700 not 3400-3500 MCF.

3. What are the limiting points of failure to go from 1300 to 1700MCF that need to be addressed. Can they walk me through what the money is being used for and why.

   a. Can we get to 1,400 with less $$

   b. Can we get to 1,500 with less $$

   c. Can we get to 1,600 with less $$

Thanks,

Will

Good afternoon Audrey,

I hope you're well. Your colleague Salena sent me in your direction regarding your assistance with understanding what permitting may be required for a project we have in Covington, GA next year.

Site address:

10835 Hazelbrand Road NE
Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project.

Thank you so much in advance and I look forward to hearing from.

Kind regards,

Good afternoon,

Apologies If I am reaching out to the incorrect person. I am looking to get some guidance on the permitting required for a site we are looking to develop in Covington, GA.

Site address:
10835 Hazelbrand Road NE
Covington, GA 30014

We are proposing to construct a natural gas power facility that will include 33 natural gas generators housed in self-contained units, an operations building that will be staffed, and additional supporting equipment to run the generators. I am hoping to gain clarity on the permits that will be required for us to proceed with this project next year.

Thank you so much in advance and I look forward to hearing from.

Kind regards,

Jenny Twentyman

Project Manager

VoltaGrid LLC

I will reach out to them to see about getting their specific questions and then forward. I would also like to discuss next steps as I mentioned to them that we would need to complete the Reimbursement Agreement and submit payment as soon as possible to meet the in-service date that is being requested.

Rusty

CAUTION! EXTERNAL SENDER STOP. ASSESS. VERIFY!! If suspicious, STOP and click the Phish Alert Button

Christine,

Thanks for the cost estimated and scope. The information was shared with the City of Covington and the customer. The customer requested that I reach out to you and see if we could schedule a call with you and your team to discuss. Would you let me know some available dates? Or if you could schedule a Teams meeting like you did last time based on your team's availability, it would be appreciated.

For our team, I would ask that you include Robin and myself, and the following:

Mike Jewell – mjewell@cityofcovington.org <mailto:mjewell@cityofcovington.org>

Will Whittington – William.w@srdc.com <mailto:William.w@srdc.com>

Brandon Seale – Brandon.seale@voltagrid.com <mailto:Brandon.seale@voltagrid.com>

Thanks,

From: Martinovich, Christine <Christine.Martinovich@Williams.com <mailto:Christine.Martinovich@Williams.com> >

Good afternoon! Please find attached the class 4 cost estimate and scope for the new Covington meter. (We are calling it Leon based on the location and street it is

near). Let me know if you have any questions or would like to get on a call with engineering.

Thanks!

Good afternoon Chen,

Please provide the following for your revision:

Submit two paper sets of plans (minimum of 24in x 36in) with cover page

Electronic copy of complete site plan on a single USB flash drive

A narrative detailing the changes would also be helpful

Kind regards,

Audrey Payne

Jacqueline,

There are structural drawings included in the building permit revisions but are not changing the structure to the existing building itself. All of our structure is a “sub structure” to the main building.

Thanks,

Mac Redmond

Jacqueline,

I’m sorry to hear that I hope you are feeling better and had a good thanksgiving.

These were revisions sent in for approval about 2-3 weeks ago. We sent the demo and underground revision in as a PDF and a hard set. We sent the Building Permit Revision in as just a PDF set.

Can you let me know if these were both approved so we can come up and grab the updated card? Let me know if you want me to send the permit numbers over to you if that makes things easier.

Thanks,

Mac Redmond

Subject: RE: Serverfarm Covington Permit Updates

Good morning, I was out sick past 2wks. I see the hard copies on my back desk. I am trying to make sure all is well, as I have over 100 emails to go through still. Did you send digital copies of that so I can make sure they are uploaded.

Also, do you need these approved or do you want them as an as-built?

Good morning Jacqueline,

I wanted reach out and check in on the permits in for revision. If you could provide some updates for the permits below that would be great.

Demo & Underground: P25-07-009

Building Permit Revision: P25-08-011

Thanks,

Mac Redmond

Good morning Jacqueline and hope you are feeling better.

I did provide digital sets of both. Here is a link to the plans we submitted for the demo and remodel just in case.

Subject: RE: Serverfarm Covington Permit Updates

Jacqueline,

I'm sorry to hear that I hope you are feeling better and had a good thanksgiving.

These were revisions sent in for approval about 2-3 weeks ago. We sent the demo and underground revision in as a PDF and a hard set. We sent the Building Permit Revision in as just a PDF set.

Can you let me know if these were both approved so we can come up and grab the updated card? Let me know if you want me to send the permit numbers over to you if that makes things easier.

Thanks,

Mac Redmond

Subject: Voltagrid / GA Power Area

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Chief Canady,

I appreciate you stopping by the job today to run through the GA Power / Voltagrid area. I just wanted to follow up our conversation today and note the few items that we discussed below.

1. Utility Cutoff – Gas shut off valve at the gas main as well as a shut off switch at each temporary generator.
2. High Voltage Visibility – Make sure plenty of signage is in place noting that this is a high voltage area
3. Water / Hydrant needs – Talking through the response plan with you today we confirmed that water access and hydrants are not needed up on the voltagrid / GA Power area.

If you can confirm I am not missing anything that would be great.

Thanks,

Mac Redmond

Avner -

Pursuant to Tim’s request, attached is the Utility Easement in executable form. Please wet-ink sign.

Jeanne -

Additionally, please sign under "Unofficial Witness” and arrange for notarization. Once completed, please forward a scanned copy to us and retain the original for our records.

Avner -

Erick will be sending you the attached Easement for local natural gas utility at Covington. It runs directly adjacent to an existing easement and does not adversely impact our use of the property. The language of the easement is acceptable. Please wet ink sign and have this notarized and return it to me.

Erick-

Please accept all changes, proof read it and pdf it and then forward to Avner and Jeanne for signature and notarization.

Subject: Re: Covington Gas Utility Easement

Avner -

Pursuant to Tim’s request, attached is the Utility Easement in executable form. Please wet-ink sign.

Jeanne -

Additionally, please sign under "Unofficial Witness” and arrange for notarization. Once completed, please forward a scanned copy to us and retain the original for our records.

From: Tim Scott <tim.scott@sfrdc.com>
Date: Tuesday, November 11, 2025 at 8:55?AM
To: Avner Papouchado <avner@sfrdc.com>, Erick Martinez <erick.m@sfrdc.com>, Jeanne Matijasevic <jeanne@sfrdc.com>
Cc: Will Whittington <william.w@sfrdc.com>
Subject: Covington Gas Utility Easement

Avner -

Erick will be sending you the attached Easement for local natural gas utility at Covington. It runs directly adjacent to an existing easement and does not adversely impact our use of the property. The language of the easement is acceptable. Please wet ink sign and have this notarized and return it to me.

Erick-

Please accept all changes, proof read it and pdf it and then forward to Avner and Jeanne for signature and notarization.

+SF Dev PM team

Hi Will,

Thanks for the update.

We've brought up the request to Georgia Power regarding potential encroachment into their right-of-way. To move this forward, we'll need a sketch showing the proposed pipeline route—including dimensions. Is that something the City can provide?

Also, please see the attached snip showing where we'd like the pipeline to tie into the natural gas yard.

Lastly, can we get confirmation from the City that the gas specification shared by Voltagrid will be what's delivered? Voltagrid is proceeding with their design based on that specification, so it's important we validate that alignment.

Let me know if you need anything further from our side.

Best regards,

D'Avery Brown

Subject: Serverfarm/Covington Gas

Hi D'Avery,

Mike is moving forward with metering design and route location for the service. Please let Mike know if the right of way we discussed previously, adjacent to the Power line easement is a workable option for installation of the 6" service line to the site.

Thanks,

Will

Subject: Transco Call

Guys,

Our contact at Transco reached out this morning and wanted to see if we could move the call to tomorrow. Would you be available between 9:00 a.m. – 11:30 a.m. (ET) or 1:30 p.m. – 5:00 p.m.

Once I hear from each of you, we will see about rescheduling.

Thanks,

Subject: Transco Call

Guys,

Our contact at Transco reached out this morning and wanted to see if we could move the call to tomorrow. Would you be available between 9:00 a.m. – 11:30 a.m. (ET) or 1:30 p.m. – 5:00 p.m.

Once I hear from each of you, we will see about rescheduling.

Thanks,

From: Will Whittington <william.w@sfrdc.com>

Hey there, for the easement, could you provide a general description of the easement needed? i.e. 10 feet running parallel, but outside of the Georgia power easement?

We are having out

D'Avery,

The City of Covington is requesting an easement in addition to the Georgia Power easement, not to encroach on their existing easement.

+SF Dev PM team
Hi Will,
Thanks for the update.
We've brought up the request to Georgia Power regarding potential encroachment into their right-of-way. To move this forward, we'll need a sketch showing the proposed pipeline route—including dimensions. Is that something the City can provide?
Also, please see the attached snip showing where we'd like the pipeline to tie into the natural gas yard.

Lastly, can we get confirmation from the City that the gas specification shared by Voltagrid will be what's delivered? Voltagrid is proceeding with their design based on that specification, so it's important we validate that alignment.
Let me know if you need anything further from our side.
Best regards,
D'Avery Brown

Hi D'Avery,

Mike is moving forward with metering design and route location for the service. Please let Mike know if the right of way we discussed previously, adjacent to the Power line easement is a workable option for installation of the 6" service line to the site.

Thanks,
Will

Westinghouse Electric Co. has joined with Canada-based Cameco Corp. and Brookfield Asset Management in a partnership that would advance deployment of nuclear power technology across the U.S. The groups on October 28 said at least $80 billion of new reactors, primarily AP1000 units from Westinghouse, would be built at the behest of the U.S. government.

Back-to-Back Major Overhauls on Two 7F.04 Gas Turbines and 7FH2 Generators <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9zy6bbO69ec0hvsee2%255EjP%257CBbPB2Vd47zXTXk&c=E,1,A8ns50Af8XoXFpcUfNv9KmuyEXS0K1uiBP-fs-lNFpDVhxVQ5q3-Mf7l8_nSJ1dMP6mOPoZF0nfyuWuD8Y1zF9hUtxZuMuMMTxKMOoekP2W0HgDJlXPDEw,,&typo=1>

Two 180-MW GE® 7FA.04 gas turbines and 7FH2 generators recently underwent back-to-back major inspections, with both units successfully returned to service on schedule. The dual outages involved full project management, inspections, component replacements, rewinds, and reassembly. The work highlighted the complexity of planning and implementation required to coordinate large-scale turbine and generator overhauls while maintaining reliability and meeting operational timelines. Learn how experts keep power systems reliable through complex overhauls.

Westinghouse Electric Co. has joined with Canada-based Cameco Corp. and Brookfield Asset Management in a partnership that would advance deployment of nuclear power technology across the U.S. The groups on October 28 said at least $80 billion of new reactors, primarily AP1000 units from Westinghouse, would be built at the behest of the U.S. government.

Back-to-Back Major Overhauls on Two 7F.04 Gas Turbines and 7FH2 Generators <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9zy6bbO69ec0hvsee2%255EjP%257CBbPB2Vd47zXTXk&c=E,1,A8ns50Af8XoXFpcUfNv9KmuyEXS0K1uiBP-fs-lNFpDVhxVQ5q3-Mf7l8_nSJ1dMP6mOPoZF0nfyuWuD8Y1zF9hUtxZuMuMMTxKMOoekP2W0HgDJlXPDEw,,&typo=1>

Two 180-MW GE® 7FA.04 gas turbines and 7FH2 generators recently underwent back-to-back major inspections, with both units successfully returned to service on schedule. The dual outages involved full project management, inspections, component replacements, rewinds, and reassembly. The work highlighted the complexity of planning and implementation required to coordinate large-scale turbine and generator overhauls while maintaining reliability and meeting operational timelines. Learn how experts keep power systems reliable through complex overhauls.

Westinghouse Electric Co. has joined with Canada-based Cameco Corp. and Brookfield Asset Management in a partnership that would advance deployment of nuclear power technology across the U.S. The groups on October 28 said at least $80 billion of new reactors, primarily AP1000 units from Westinghouse, would be built at the behest of the U.S. government.

Back-to-Back Major Overhauls on Two 7F.04 Gas Turbines and 7FH2 Generators <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9zy6bbO69ec0hvsee2%255EjP%257CBbPB2Vd47zXTXk&c=E,1,A8ns50Af8XoXFpcUfNv9KmuyEXS0K1uiBP-fs-lNFpDVhxVQ5q3-Mf7l8_nSJ1dMP6mOPoZF0nfyuWuD8Y1zF9hUtxZuMuMMTxKMOoekP2W0HgDJlXPDEw,,&typo=1>

Two 180-MW GE® 7FA.04 gas turbines and 7FH2 generators recently underwent back-to-back major inspections, with both units successfully returned to service on schedule. The dual outages involved full project management, inspections, component replacements, rewinds, and reassembly. The work highlighted the complexity of planning and implementation required to coordinate large-scale turbine and generator overhauls while maintaining reliability and meeting operational timelines. Learn how experts keep power systems reliable through complex overhauls.

Subject: Re: Serverfarm Covington FSA Generator Fuel Permit

Hello Mac,
I hope all is well.

1) I do need a site visit and see where we are at.

2) I will need a copy of the approved drawings from the state.

Thank you,

Robert Canady,

Deputy Chief-Fire Marshal

Robert Canady, Fire Marshal, IAAI-FIT

Deputy Chief

City of Covington

770-385-2155 Office

678-654-1070 Cell

Chief Canady,

I know you were taking a look at this last week and wanted to follow up to see if you were able to complete it?

Happy to walk the job tomorrow, or Friday if you have any questions.

Thanks,

Mac Redmond
Assistant Project Manager

Chief Canady,

I wanted to send over this FSA that is required for our generator fuel permit for you and your team to fill out. Once completed if you can sign at the bottom I can attach this to our generator fuel permit for submission to the state. If you have any questions please let me know.

Thanks,

Mac Redmond

Mike,

The only thing I see is that Exhibit "A" needs to be changed from "TBD" to some outside maximum number that they could possibly owe the City if they don't execute a facilities agreement. If that number is not inserted prior to signing, the City would not be entitled to any reimbursement.

Hi Mike,
I wanted to check back in about scheduling time with Transco this week—ideally before we receive the Scope 4 and Scope 5 feedback.
Please let Brandon and me know what time might work, and we'll make it a priority.
Thanks
Will

Taiwan's energy transition faces a unique challenge: powering its world-leading semiconductor industry while phasing out nuclear power and reducing coal dependence. Part of the solution emerged from an unlikely location—a former pineapple field in Tainan—where engineers built what has been recognized as a POWER Top Plant award-winning facility critical to the island's energy future.

Google announced the first phase of a $4-billion data center project in West Memphis, Arkansas, an initiative that state officials have called one of the largest economic investments in state history. The facility, located near the Arkansas-Tennessee state line, will be powered by Entergy using solar power and existing generation in the area.

Xcel Energy is adding more natural gas-fired power generation in Texas, with plans to convert a retiring coal-fired plant to natural gas, along with building a new peaker plant to provide electricity at times of high demand.
<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnk2e0Eo8eRbPB2Vd47zXTXk&c=E,1,pepoSi0y4NaTsblqXJlz1tyTfA89lnxVR0wQ4MzWldpwr23HEH-e9vJGa9btN9WHPwZs4ZeT0tMmgcUAc7RvYUpDJZ2BF5XKQiqP8u_7SZXztPVa_qU5uw8fjg,,&typo=1> Duke Energy Plan Includes New Gas-Fired Plants, Nuclear Additions, Delayed Coal Retirements <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnk6e0Eo8eRbPB2Vd47zXTXk&c=E,1,ldZpbgiiY2qetneIjWKt-XRItd2kh7jxwFz5qbDsbqEjcgqAIQcvpJd_USiNrpdAsHcbYqs_xBCmO8ssJBtJw7rYrGTZJLSpT1nwecChzLl0vPKl9Q,,&typo=1>
Duke Energy announced plans to build more natural gas-fired generation capacity and look at nuclear power in order to meet the increased demand for power in its Carolinas service territory. The utility also said it will delay the retirement of some coal-fired facilities as it seeks to increase the supply of electricity for data centers and manufacturing plants.

EthosEnergy's Flexible Rotor Solutions for 7FA Reliability <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnh2e0Eo8eRbPB2Vd47zXTXk&c=E,1,YJ6BjCITmrSGY_DTRJHQabFgupaiIee4-4ncoa-2OZTgIQkZYIHbPJK8Nc0PfPE0Vybkkhq7iLPhyRGwLPbnf-lwRJyOWspYsaRZ0armfDw4KUBK8RhcgA,,&typo=1>

Is your Frame 7FA rotor nearing 144,000 FFH or 5,000 FFS? With supply chain delays and material shortages, early planning is critical. EthosEnergy offers proven rotor solutions, ranging from life extension to new rotors, all thoughtfully reengineered for safety, compliance, and long-term reliability.

FirstEnergy Corp. has submitted a plan to build a new 1,200-MW natural gas-fired combined-cycle power plant to serve customers in West Virginia. The company recently filed an Integrated Resource Plan (IRP) with state regulators that also calls for keeping two major coal-fired power plants in West Virginia operating at least through the next decade.

Hybrid Power and the Need for Integrated Control <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hn%257Cqe0Eo8eRbPB2Vd47zXTXk&c=E,1,8Y7_clapyMINliSTcGpELPlyMYBNBDgwZF-7NZGX8Q0ja-wvB21PdyptxRFtMZLN3acbJfSDRaqAgUyAXs329oRYTlz13jtAB3F_N9qzbH69KHY,&typo=1>

As energy demand surges and power systems grow more complex, operators face the challenge of balancing reliability, efficiency and compliance. Discover Siemens Energy’s Omnivise Hybrid Control (OHC) solution – an intelligent system designed to seamlessly integrate different energy sources in one single platform. Experience the next steps toward a resilient, flexible, and sustainable energy future with cutting-edge technology from Siemens Energy.

Taiwan’s energy transition faces a unique challenge: powering its world-leading semiconductor industry while phasing out nuclear power and reducing coal dependence. Part of the solution emerged from an unlikely location—a former pineapple field in Tainan—where engineers built what has been recognized as a POWER Top Plant award-winning facility critical to the island’s energy future.

Xcel Plans New Gas-Fired Plants as Part of 5-GW Expansion in Texas, New Mexico <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnkye0Eo8eRbPB2Vd47zXTXk&c=E,1,0zAEMYHGZvHyRn30vdbzWm1EIFDQfk4jV_RCongsRM8s_6iZ9GEJIAQiaATh32bGBnyoHMcCzFeP5QV-GHj84KV912esTiQFZ6wj-3ZEsnAho81yo0p0WGeQ3Qk,&typo=1>
Xcel Energy is adding more natural gas-fired power generation in Texas, with plans to convert a retiring coal-fired plant to natural gas, along with building a new peaker plant to provide electricity at times of high demand.
<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnk2e0Eo8eRbPB2Vd47zXTXk&c=E,1,pepoSi0y4NaTsblqXJlz1tyTfA89lnxVR0wQ4MzWldpwr23HEH-e9vJGa9btN9WHPwZs4ZeT0tMmgcUAc7RvYUpDJZ2BF5XKQiqP8u_7SZXztPVa_qU5uw8fjg,,&typo=1>
Duke Energy Plan Includes New Gas-Fired Plants, Nuclear Additions, Delayed Coal Retirements <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnk6e0Eo8eRbPB2Vd47zXTXk&c=E,1,ldZpbgiiY2qetneIjWKt-XRItd2kh7jxwFz5qbDsbqEjcgqAIQcvpJd_USiNrpdAsHcbYqs_xBCmO8ssJBtJw7rYrGTZJLSpT1nwecChzLl0vPKl9Q,,&typo=1>
Duke Energy announced plans to build more natural gas-fired generation capacity and look at nuclear power in order to meet the increased demand for power in its Carolinas service territory. The utility also said it will delay the retirement of some coal-fired facilities as it seeks to increase the supply of electricity for data centers and manufacturing plants.

EthosEnergy's Flexible Rotor Solutions for 7FA Reliability <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9z%257CebbO6sqc0hnh2e0Eo8eRbPB2Vd47zXTXk&c=E,1,YJ6BjCITmrSGY_DTRJHQabFgupaiIee4-4ncoa-2OZTgIQkZYIHbPJK8Nc0PfPE0Vybkkhq7iLPhyRGwLPbnf-lwRJyOWspYsaRZ0armfDw4KUBK8RhcgA,,&typo=1>

Is your Frame 7FA rotor nearing 144,000 FFH or 5,000 FFS? With supply chain delays and material shortages, early planning is critical. EthosEnergy offers proven rotor solutions, ranging from life extension to new rotors, all thoughtfully reengineered for safety, compliance, and long-term reliability.

FirstEnergy Corp. has submitted a plan to build a new 1,200-MW natural gas-fired combined-cycle power plant to serve customers in West Virginia. The company recently filed an Integrated Resource Plan (IRP) with state regulators that also calls for keeping two major coal-fired power plants in West Virginia operating at least through the next decade.

Taiwan’s energy transition faces a unique challenge: powering its world-leading semiconductor industry while phasing out nuclear power and reducing coal dependence. Part of the solution emerged from an unlikely location—a former pineapple field in Tainan—where engineers built what has been recognized as a POWER Top Plant award-winning facility critical to the island’s energy future.

Google announced the first phase of a $4-billion data center project in West Memphis, Arkansas, an initiative that state officials have called one of the largest economic investments in state history. The facility, located near the Arkansas-Tennessee state line, will be powered by Entergy using solar power and existing generation in the area.

Duke Energy announced plans to build more natural gas-fired generation capacity and look at nuclear power in order to meet the increased demand for power in its Carolinas service territory. The utility also said it will delay the retirement of some coal-fired facilities as it seeks to increase the supply of electricity for data centers and manufacturing plants.

Ballpark will be an estimate to upgrade the meter. It should cover material costs and labor.

Transco stated that the city is already exceeding the capacity limits of the existing meter, and it would need to be replaced.

That’s all I got.

Rusty

Thanks, is the ballpark on cost and time? Also, was there a throughput limit sent back without upgrading the meter?

Subject: RE: Updates

2:00 would work for me.

Scope 5 is just a ballpark / back of the napkin estimate.

Scope 4 is the more detail quote and is what would be used in the official interconnect agreement for the meter upgrade.

Rusty

Hi Rusty, Mike,

Thanks for the update and what time would work on the reschedule?

For the gate meter and tap that will need upgrading, what does the scope 5 estimate mean and class 4 scope of work entail?

Could you give me a quick call to discuss?

Thanks

Will Whittington

Subject: RE: Updates

Will,

First, would it be possible to move the rescheduled call tomorrow to 2:00?

Second, we did hear back from Transco on the city gate meter. Transco stated that their initial assessment is the city gate meter and tap will need to be upgraded. They did ask for a little more clarity on the gas load and they are working to get us a Scope 5 estimate for the work by the middle of next week and then they expect to have the Class 4 scope of work to us in 10-14 days. The later is the more formal quote range.

Regards,

Rusty

Good morning, Will,

Still no news from Transco. I am moving forward with metering design and route location for the service. Please advise, if the right of way we discussed previously, adjacent to the Power line easement is a workable option for installation of the 6” service line to the site.

Thanks,

Mike

Thanks, is the ballpark on cost and time? Also, was there a throughput limit sent back without upgrading the meter?

Hi Mike,

I look forward to working with you to complete this outstanding item. To confirm my understanding, are the terms “Maintenance Covenant” and “Performance Covenant” being used interchangeably to refer to the template previously shared?

As the new owner, we’re being diligent in obtaining a copy, as it’s important that we review the obligations previously agreed upon to properly assess and finalize the agreement the County is requiring us to provide.

Thank you,

Good Afternoon Michael,

I have attached a string of emails to help refresh your memory on our project. I have also attached the Maintenance Bond and Calculation spreadsheet that was used when we originally worked with you to put the bond in place.

I have also copied Jason Volk to this email. We are in the process of selling the building to Jason's team. They are needing some additional information regarding the bond as they will be replacing our bond after purchasing the property.

I will let you guys take it from here but wanted to make the introduction.
Thank you,

Kevin

Hi Mike,

Thanks for the update.

Just to clarify—does the City still require us to pursue a request with Georgia Power to encroach on their transmission right-of-way, or is the new easement being proposed intended to avoid that altogether?

Also, could you provide an estimated date when preliminary drawings of the pipeline location might be available? We’d like to incorporate that into our drawing set as soon as possible to keep things aligned.

Let me know if you need anything further from our side.

Best regards,

D’Avery Brown

D’Avery,

The City of Covington is requesting an easement in addition to the Georgia Power easement, not to encroach on their existing easement.

+SF Dev PM team

Hi Will,

Thanks for the update.

We've brought up the request to Georgia Power regarding potential encroachment into their right-of-way. To move this forward, we'll need a sketch showing the proposed pipeline route—including dimensions. Is that something the City can provide?

Also, please see the attached snip showing where we'd like the pipeline to tie into the natural gas yard.

Lastly, can we get confirmation from the City that the gas specification shared by Voltagrid will be what's delivered? Voltagrid is proceeding with their design based on that specification, so it's important we validate that alignment.

Let me know if you need anything further from our side.

Best regards,

D'Avery Brown

Subject: Serverfarm/Covington Gas

Hi D'Avery,

Mike is moving forward with metering design and route location for the service. Please let Mike know if the right of way we discussed previously, adjacent to the Power line easement is a workable option for installation of the 6" service line to the site.

Thanks,

Will

Will,

First, would it be possible to move the rescheduled call tomorrow to 2:00?

Second, we did hear back from Transco on the city gate meter. Transco stated that their initial assessment is the city gate meter and tap will need to be upgraded. They did ask for a little more clarity on the gas load and they are working to get us a Scope 5 estimate for the work by the middle of next week and then they expect to have the Class 4 scope of work to us in 10-14 days. The later is the more formal quote range.

Regards,

Rusty

Thanks Mike,

Has there been any communication from Transco? I've pinged Brandon to see if he can get things moving on the Voltagrid side as well.

Will

Jacquline,

Please see attached documents. I have included all the trailer application forms as well as the electricians information as well who will be doing the temp power. I also have included the site layout plans with the trailers labeled the same as below.

Please let me know if you need anything else from me. Do you know what the turn around time on this may look like with getting these permitted?

Trailer A = SF – Needs a Permit

Trailer B = B&G Quad – Already Permitted – P25-08-008

Trailer C = B&G – Needs a Permit

Trailer D = Excel – Needs a Permit

Trailer E = Inglett & Stubbs – Needs a Permit

Trailer F = Allison Smith – Needs a Permit

Trailer G = Kennimer & Knox – Needs a Permit

Thanks,

Hey Jacqueline,

I hope you had a good weekend. We tried to call in inspections for our office trailers and it sounds like we need to get some additional trailers under permit. It was my understanding that all our trailers were going to be looped under one permit, but the inspector was telling us the permit was only for 3/7 trailers. When I was submitting this permit originally, Donna was telling me it would be best for both parties to just loop all the trailers under one permit and I submitted a trailer plan (attached) showing all the trailers which got approved. Is there anyway we can keep these all under one permit, or do we need to permit each individual trailer? Please let me know what I need to do to get our other 4 trailers inspected.

He mentioned it was only $175.00 and that if it was inclusive of all the trailers it should be more. If we need to pay more that is also fine.

Thanks,

Mac Redmond

Hey Jacqueline,

I hope you had a good weekend. We tried to call in inspections for our office trailers and it sounds like we need to get some additional trailers under permit. It was my understanding that all our trailers were going to be looped under one permit, but the inspector was telling us the permit was only for 3/7 trailers. When I was submitting this permit originally, Donna was telling me it would be best for both parties to just loop all the trailers under one permit and I submitted a trailer plan (attached) showing all the trailers which got approved. Is there anyway we can keep these all under one permit, or do we need to permit each individual trailer? Please let me know what I need to do to get our other 4 trailers inspected.

He mentioned it was only $175.00 and that if it was inclusive of all the trailers it should be more. If we need to pay more that is also fine.

Thanks,

Mac Redmond

Good Afternoon Michael,

I have attached a string of emails to help refresh your memory on our project. I have also attached the Maintenance Bond and Calculation spreadsheet that was used when we originally worked with you to put the bond in place.

I have also copied Jason Volk to this email. We are in the process of selling the building to Jason's team. They are needing some additional information regarding the bond as they will be replacing our bond after purchasing the property.

I will let you guys take it from here but wanted to make the introduction.
Thank you,

Kevin

+SF Dev PM team

Hi Will,

Thanks for the update.

We've brought up the request to Georgia Power regarding potential encroachment into their right-of-way. To move this forward, we'll need a sketch showing the proposed pipeline route—including dimensions. Is that something the City can provide?

Also, please see the attached snip showing where we'd like the pipeline to tie into the natural gas yard.

Lastly, can we get confirmation from the City that the gas specification shared by Voltagrid will be what's delivered? Voltagrid is proceeding with their design based on that specification, so it's important we validate that alignment.

Let me know if you need anything further from our side.

Best regards,

D'Avery Brown

Hi D'Avery,

Mike is moving forward with metering design and route location for the service. Please let Mike know if the right of way we discussed previously, adjacent to the Power line easement is a workable option for installation of the 6" service line to the site.

Thanks,

Will

Thanks Mike,

Has there been any communication from Transco? I've pinged Brandon to see if he can get things moving on the Voltagrid side as well.
Will

Subject: Updates

Good morning, Will,

Still no news from Transco. I am moving forward with metering design and route location for the service. Please advise, if the right of way we discussed previously, adjacent to the Power line easement is a workable option for installation of the 6” service line to the site.

Thanks,

Mike

Hey Jacqueline,

We will have another “TFO build out permit” that’ll be around $150 mil can you advise on what that permit cost will be around?

Thanks,

Mac Redmond

Jacquline,

Please see attached documents. I have included all the trailer application forms as well as the electricians information as well who will be doing the temp power. I also have included the site layout plans with the trailers labeled the same as below.

Please let me know if you need anything else from me. Do you know what the turn around time on this may look like with getting these permitted?

Trailer A = SF – Needs a Permit

Trailer B = B&G Quad – Already Permitted – P25-08-008

Trailer C = B&G – Needs a Permit

Trailer D = Excel – Needs a Permit

Trailer E = Inglett & Stubbs – Needs a Permit

Trailer F = Allison Smith – Needs a Permit

Trailer G = Kennimer & Knox – Needs a Permit

Thanks,

Mac Redmond

Hey Jacqueline,

I hope you had a good weekend. We tried to call in inspections for our office trailers and it sounds like we need to get some additional trailers under permit. It was my understanding that all our trailers were going to be looped under one permit, but the inspector was telling us the permit was only for 3/7 trailers. When I was submitting this permit originally, Donna was telling me it would be best for both parties to just loop all the trailers under one permit and I submitted a trailer plan (attached) showing all the trailers which got approved. Is there anyway we can keep these all under one permit, or do we need to permit each individual trailer? Please let me know what I need to do to get our other 4 trailers inspected.

He mentioned it was only $175.00 and that if it was inclusive of all the trailers it should be more. If we need to pay more that is also fine.

Thanks,

Mac Redmond

FirstEnergy Plan Calls for New Gas-Fired Plant, Continued Coal-Fired Generation <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9y%255E2bbO3TDc0g6wDe0w0FgwbPB2Vd47zXTXk&c=E,1,EnvPS5cMI-STnYVQt_kXpdSbpzpsCIA3cHMO1cHEAvR2HAxjGXy5nfdUJQE3qFrY7qJgFTUSNv3bubeliwH_MHfqYFtJYHQsPC5WIY0AzIvfkSqJvbBokNd6WNc,&typo=1>
FirstEnergy Corp. has submitted a plan to build a new 1,200-MW natural gas-fired combined-cycle power plant to serve customers in West Virginia. The company recently filed an Integrated Resource Plan (IRP) with state regulators that also calls for keeping two major coal-fired power plants in West Virginia operating at least through the next decade.

The true engine of America's economy might surprise you. It's not tech. It's not artificial intelligence, finance, or manufacturing. It's energy. Energy accounts for just 7% of America's gross domestic product (GDP), but, as former FERC Chair Mark Christie put it, "it's the foundational 7% ... everything else in our economy and lifestyle flows from it."

EthosEnergy's Flexible Rotor Solutions for 7FA Reliability <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9y%255E2bbO3TDc0g6wye0w0FgwbPB2Vd47zXTXk&c=E,1,yO51lUl1nyw8l03Mdq6O-DNlYBoJpSG38ZNLNxTw7DaL6-qQwtq_NGG-cb2bUHd-OKgWvR9ZFAZvKf3nidjvt-K8GUsSSu4_2fs57PmyhA9gljFCYdbu_Q,,&typo=1>

Is your Frame 7FA rotor nearing 144,000 FFH or 5,000 FFS? With supply chain delays and material shortages, early planning is critical. EthosEnergy offers proven rotor solutions, ranging from life extension to new rotors, all thoughtfully reengineered for safety, compliance, and long-term reliability.

FirstEnergy Plan Calls for New Gas-Fired Plant, Continued Coal-Fired Generation <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fai.omeclk.com%2fportal%2fwts%2fuc%255Ecmsb9y%255E2bbO3TDc0g6wDe0w0FgwbPB2Vd47zXTXk&c=E,1,EnvPS5cMI-STnYVQt_kXpdSbpzpsCIA3cHMO1cHEAvR2HAxjGXy5nfdUJQE3qFrY7qJgFTUSNv3bubeliwH_MHfqYFtJYHQsPC5WIY0AzIvfkSqJvbBokNd6WNc,&typo=1>
FirstEnergy Corp. has submitted a plan to build a new 1,200-MW natural gas-fired combined-cycle power plant to serve customers in West Virginia. The company recently filed an Integrated Resource Plan (IRP) with state regulators that also calls for keeping two major coal-fired power plants in West Virginia operating at least through the next decade.

The true engine of America’s economy might surprise you. It’s not tech. It’s not artificial intelligence, finance, or manufacturing. It’s energy. Energy accounts for just 7% of America’s gross domestic product (GDP), but, as former FERC Chair Mark Christie put it, “it’s the foundational 7% ... everything else in our economy and lifestyle flows from it.”

Subject: RE: Voltagrid Gas Composition Analysis

The station 120 readings from Transco is the ONLY data available to us. The City of Covington does not have a Chromatograph for data verification.

I am uncertain what the flange temperature will be.

I will need to meet on-site for the metering station placement/location and review the route location options.

Thank you,

Mike

Subject: RE: Voltagrid Gas Composition Analysis

Just to make sure we're not running in circles, those chromatograph readings are pulled off of the EBB for Transco at Station 120. In previous discussions with Mike and Rusty, they had indicated that was the closest station and should be representative of the gas quality they are getting delivered to Covington. And that they didn't have any other gas samples or gas analysis. @Mike Jewell <mailto:mjewell@cityofcovington.org> , if that's wrong let me know.

At this point we need our (VG's) team to confirm whether that information is sufficient.

Your questions around temperature and exact meter station location are still good ones, perhaps @Mike Jewell <mailto:mjewell@cityofcovington.org> can help us with those.

Subject: Voltagrid Gas Composition Analysis

Hi Brandon, Mike,

Evidently, Voltagrid requires a gas composition analysis report as they advance our project. Could either of you clarify exactly what is needed and who would be best positioned to provide it?

D'Avery (ccd) is the contact on our side chasing this down.

Thanks,

Will

Mike

I am good with your response and sorry for the delay in responding.

I wouldn't think these generators are that sensitive to gas quality – they are located all over the pipeline networks.

Scott

I am comfortable saying the data is the current version, I cannot confirm the accuracy. Flange temperature??? And lastly we need to meet on-site to see the exact metering location before OUR engineering team can design the route. Ya'll good with that?

Hi Mike,

I hope you're doing well.

Attached is the gas composition analysis that was previously shared with the Voltagrid team. Could you please confirm whether this data is accurate and the most current version available?

Additionally, could you confirm what the expected flange temperature will be?

Lastly, if available, could you provide a drawing that shows where the gas pipeline will enter our property? We'd like to incorporate this into our civil set for coordination purposes.

Thanks again for your support.

Best regards,

D’Avery Brown

For the avoidance of doubt, @Mike Jewell <mailto:mjewell@cityofcovington.org> , will you confirm that Station 120 chromatograph readings on Transco would be the best representative data of the gas spec flowing into Covington? Looping back in @Rusty Hough <mailto:rhough@gasauthority.com> as well.

Brandon Seale

Subject: RE: Voltagrid Gas Composition Analysis

Just to make sure we're not running in circles, those chromatograph readings are pulled off of the EBB for Transco at Station 120. In previous discussions with Mike and Rusty, they had indicated that was the closest station and should be representative of the gas quality they are getting delivered to Covington. And that they didn't have any other gas samples or gas analysis. @Mike Jewell <mailto:mjewell@cityofcovington.org> , if that's wrong let me know.

At this point we need our (VG's) team to confirm whether that information is sufficient.

Your questions around temperature and exact meter station location are still good ones, perhaps @Mike Jewell <mailto:mjewell@cityofcovington.org> can help us with those.

Subject: RE: Voltagrid Gas Composition Analysis

Hi Mike,

I just wanted to follow up on Will's note from last week.

Any updates to share?

Thank you,

D'Avery Brown

Subject: Voltagrid Gas Composition Analysis

Hi Brandon, Mike,

Evidently, Voltagrid requires a gas composition analysis report as they advance our project. Could either of you clarify exactly what is needed and who would be best positioned to provide it?

D'Avery (ccd) is the contact on our side chasing this down.

Thanks,

Will

Subject: RE: Serverfarm Draft Contract

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike,

I have the term “Interruptible” in there to cover any volumes on a daily basis that exceed the “firm” delivered supply contract that we will be bringing in. In Exhibit A, section 1, you will see firm contract quantities are deemed as first gas through the meter. Any volumes over the daily firm, will be at Transco’s interruptible tariff rates and daily market price.

Rusty

Rusty and Frank,

I keep seeing “firm and interruptible,” and this is a 100% firm contract. Is there any reason to leave that wording in there? I don’t want them to request an interruptible rate structure when they are firm.

Mike

Good afternoon Tres,

May you confirm whether the email was received from DocuSign? If not, as Sarah mentioned below, we are happy to send the document as a PDF for execution and send it back to us once signed.

Thank you,

From: Will Whittington <william.w@sfrdc.com>

Brandon,

This maybe a duplicate request. Varun will talk through it in the weekly meeting today. We'd just like to validate that this is still the best gas data to be utilized.

Regards,

Achal Shah

Subject: Voltagrid Gas Composition Analysis

Hi Brandon, Mike,

Evidently, Voltagrid requires a gas composition analysis report as they advance our project. Could either of you clarify exactly what is needed and who would be best positioned to provide it?

D'Avery (ccd) is the contact on our side chasing this down.

Thanks,

Will

You can use the Meeting Ticket number to check PRIS and see which members will and which will not attend the meeting. The day after the meeting the GA811 Online Ticketing System will generate the Excavation Ticket. The Excavation Ticket will have a different number than the Meeting Ticket. The Excavation Ticket will be emailed to the caller email address listed. The Excavation Ticket will show the expiration date and the update window. The update window will start 5 business days before the expiration and end at 4:30 pm on the expiration date. The expiration date may be on a holiday or on a weekend. The Excavation Ticket MUST be updated by 4:30 pm (when our system switches to the next business day) on the expiration date. After 4:30pm on the expiration date you will be required to enter a new Large Project. Bring proposed marking agreements to the meeting for each of the members listed and for yourself. Failure to bring marking agreements may result in the cancellation of your ticket. Sample marking agreements may be found on the Georgia811 website. https://lpform.geocall.ga811.com/5e13e5bd-994c-4839-9dff-8118258da0ec Best time to call: 8:00 AM to 5:00 PM

Remarks
Project Name: Serverfarm ATL 2
You can use the Meeting Ticket number to check PRIS and see which members will and which will not attend the meeting. The day after the meeting the GA811 Online Ticketing System will generate the Excavation Ticket. The Excavation Ticket will have a different number than the Meeting Ticket. The Excavation Ticket will be emailed to the caller email address listed. The Excavation Ticket will show the expiration date and the update window. The update window will start 5 business days before the expiration and end at 4:30 pm on the expiration date. The expiration date may be on a holiday or on a weekend. The Excavation Ticket MUST be updated by 4:30 pm (when our system switches to the next business day) on the expiration date. After 4:30pm on the expiration date you will be required to enter a new Large Project. Bring proposed marking agreements to the meeting for each of the members listed and for yourself. Failure to bring marking agreements may result in the cancellation of your ticket. Sample marking agreements may be found on the Georgia811 website. https://lpform.geocall.ga811.com/5e13e5bd-994c-4839-9dff-8118258da0ec Best time to call: 8:00 AM to 5:00 PM

Subject: Voltagrid Gas Composition Analysis

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hi Brandon, Mike,

Evidently, Voltagrid requires a gas composition analysis report as they advance our project. Could either of you clarify exactly what is needed and who would be best positioned to provide it?

D'Avery (ccd) is the contact on our side chasing this down.

Thanks,
Will

Will Whittington

Locate Instructions
Locate the entire property including all R/O/Ws
Remarks
Project Name: Serverfarm ATL 2
You can use the Meeting Ticket number to check PRIS and see which members will and which will not attend the meeting. The day after the meeting the GA811 Online Ticketing System will generate the Excavation Ticket. The Excavation Ticket will have a different number than the Meeting Ticket. The Excavation Ticket will be emailed to the caller email address listed. The Excavation Ticket will show the expiration date and the update window. The update window will start 5 business days before the expiration and end at 4:30 pm on the expiration date. The expiration date may be on a holiday or on a weekend. The Excavation Ticket MUST be updated by 4:30 pm (when our system switches to the next business day) on the expiration date. After 4:30pm on the expiration date you will be required to enter a new Large Project. Bring proposed marking agreements to the meeting for each of the members listed and for yourself. Failure to bring marking agreements may result in the cancellation of your ticket. Sample marking agreements may be found on the Georgia811 website. https://lpform.geocall.ga811.com/5e13e5bd-994c-4839-9dff-8118258da0ec Best time to call: 8:00 AM to 5:00 PM

Good morning,

They have submitted and were denied, so now we are waiting for the resubmittal.

They were issued an interior demo permit and that one was issued on 9-16-25

Good Morning,

This is Gwyn with Dodge Construction Network. I am hoping you can provide me with information regarding Serverfarm Data Center Conversion at 10835 Hazelbrand Rd NE. Can you please tell me if permits were issued for the project and if so, the date they were issued? If not, can you please tell me where they are at in the review process? Any information you can provide would be greatly appreciated.

Thank you for your assistance.

Best Regards,

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Good Morning,

This is Gwyn with Dodge Construction Network. I am hoping you can provide me with information regarding Serverfarm Data Center Conversion at 10835 Hazelbrand Rd NE. Can you please tell me if permits were issued for the project and if so, the date they were issued? If not, can you please tell me where they are at in the review process? Any information you can provide would be greatly appreciated.

Thank you for your assistance.

Best Regards,

GWYN SCHINKEL

Good morning,

They have submitted and were denied, so now we are waiting for the resubmittal.

They were issued an interior demo permit and that one was issued on 9-16-25

Your account has been set up as of 09/24/2025, your account number is 00115230.

Your bill will be mailed out around the 6th and due around the 27th of each month. Do allow thirty days of usage in order to send you your first bill.

You will have until the next business day to have the bill paid before a 10% penalty is added to the

electric portion of your bill. However, you will have a (2) weeks grace period from the bill due date to

have the bill paid before its disconnected and a $30.00 additional fee will be added.

We guarantee next business day so services will not be on until tomorrow.

If you have any questions feel free to give us call back at 770-385-2000.

Customer Service,

Thank you.

Hello,

1. ID for Kevin Dillard, the man who signed the application, is attached.
2. We have not yet received the deed from Chicago Title; we expect it shortly and will provide.
3. Gas form: please talk with Mike Jewell and let us know if the completed gas form is still needed considering the project Mike is helping us with.

Thank you for your assistance.

To whom it may concern,

Serverfarm would like to establish utility service for the property located at 10835 Hazelbrand Rd NE, Covington, GA.

We acquired the property on Tuesday. We are the new owners.

Attached is the application for new utility service and our W9 form. Please let us know what additional information is needed.

Thank you.

Email hacking and fraud are occurring with greater frequency on real estate transactions. If you are involved in a real estate transaction as a buyer, seller, lender or real estate agent/broker or in any other capacity, you must immediately call the escrow agent or closing attorney to whom you will be sending money to or receiving money from via a wire transfer. Please contact the escrow agent or closing attorney using contact information found from an independent source, such as the sales contract, internet or telephone to verify any wiring/funding instructions received from the escrow agent/closing attorney. I am not responsible for any wires sent by you to an incorrect bank account.

Subject: Re: Updated Load/CRA/Docs
Hi Mike,
Apologies — I hadn't realized Rob had left.
The only change I see is aligning the Phase 2 in the Facilities Agreement with the load letter. I can make that update and handle the routing.
For the load letter, I'll send it directly to you.
For the Facilities Agreement, should I route it directly to the Mayor's office? If so, could you please provide me with the appropriate email address?

Thanks,
Will

Hi Mike, I just reviewed with our attorney.

A couple of quick clarifications on the Load Letter:

* Phase 2 / Payment Terms- Needs Updating based on Transco Analysis not Facilities Agreement Execution: Initial remittance, not to exceed 50% of the Phase 2 cost (final amount to be determined), shall be due within 60 days of Transco's confirmation of the Phase 2 requirement.

* Signatures: Our understanding is that you are the only required signatory. Once that is in place, we will proceed with execution of the Facilities Agreement

Once we receive the signed load letter with above slight modifications, we will execute the Facilities Agreement (With the updated XXXMCF and the Phasing) and CRA.

I know it is late EST, but is there any way we could try to get the load letter today? I think the facilities etc could wait till tomorrow.

Give me a call if you need anything.

Thanks,

Will

Good Morning,

City Council unanimously voted in favor of the Gas Facilities Agreement, Load Ramp, and Cost Reimbursement Agreement at last night's meeting. I will get a final draft together to submit to both parties.

Mike

Thanks Mike,

Hi Frank, On the Facilities Agreement, we just need to ensure consistency with the Phases outlined in the Load Letter and align the gas volume reference (XXX MCF) with the 750 MCF stated in the Load Letter.
Feel free to give me a call with any questions.
Thanks,
Will Whittington

Frank,

Please see the email below. I am listed as the signer on the Load Letter. If this needs to be, the Mayor, can we change that as well, please?

Thank you,

Mike

Hi Mike, I just reviewed with our attorney.

A couple of quick clarifications on the Load Letter:

* Phase 2 / Payment Terms- Needs Updating based on Transco Analysis not Facilities Agreement Execution: Initial remittance, not to exceed 50% of the Phase 2 cost (final amount to be determined), shall be due within 60 days of Transco's confirmation of the Phase 2 requirement.

* Signatures: Our understanding is that you are the only required signatory. Once that is in place, we will proceed with execution of the Facilities Agreement

Once we receive the signed load letter with above slight modifications, we will execute the Facilities Agreement (With the updated XXXMCF and the Phasing) and CRA.

I know it is late EST, but is there any way we could try to get the load letter today? I think the facilities etc could wait till tomorrow.

Give me a call if you need anything.

Thanks,

Will

Hi Mike, just on a quick review, looks like the facilities needs to be updated with the phases listed in the load letter. It has the old phase 2.a and 2. B. Also filling in the XXXMCF in the doc.

LMK if that makes sense.

To whom it may concern,

Serverfarm would like to establish utility service for the property located at 10835 Hazelbrand Rd NE, Covington, GA.

We acquired the property on Tuesday. We are the new owners.

Attached is the application for new utility service and our W9 form. Please let us know what additional information is needed.

Thank you.

To whom it may concern,

Serverfarm would like to establish utility service for the property located at 10835 Hazelbrand Rd NE, Covington, GA.

We acquired the property on Tuesday. We are the new owners.

Attached is the application for new utility service and our W9 form. Please let us know what additional information is needed.

Thank you.

Hi Mike,
Hope you're doing well today. Just wanted to check if you have any update on the ETA for the attorney docs.
Thanks so much,
Will

Brandon,

Thanks for the high-level details this morning.

I discussed the request with Christine Martinovich which is the customer development Rep for Covington and MGAG. She will reach out with next steps which might involve having a meeting with our FEED team and some of our measurement SME's to understand the request completely.

If there are specific questions that you have about the current meter station, please send them and our team can start reviewing them.

Thanks,

CAUTION! EXTERNAL SENDER STOP. ASSESS. VERIFY!! If suspicious, STOP and click the Phish Alert Button

Hello Carlos,

Good to talk this morning. As we discussed on the phone, we're working with a customer and the City of Covington and MGAG on a project in Covington, GA that would require some meter station modifications coming off of Transco. We'd like to connect with the right person at Transco to help us understand the capacities of the current tap, meter set, and pressure regulation. Timing is tight on this project, and we don't think there is time to install a new tap on Transco and loop Covington's system all the way back to the project site, but we think there may be a way to solve for the customers requirements via some upgrades to Covington's system and some modification to Transco's existing pressure regulation and measurement set up. Could you help direct us to the right folks?

Thanks in advance.

Subject: RE: Serverfarm Covington - Demo Permit

Mac,

He dropped by late yesterday and said he was going to but still hasn't cleared it in the system.

The system won't let me issue it until he clears it.

I'll give him a call now.

Donna,

I hope you had a good weekend. I was talking to the fire marshal and it sounds like our demo permit got approved. Once it shows up on your end will you let me know so I can come pick it up?

Thanks,

Mac Redmond

Mac,

I did. I was thinking building and not underground.

What is the underground? Is it for utilities?

I'm not sure what you need for that or who you might need.

Donna,

Thanks for the quick response. I think you sent over the building permit comments rather than the demo and underground permit.

I still owe the city a re submission for the building permit, but the demo permit should be in the fire marshals court. I appreciate the update.

Thanks!

Attachments: City of Covington Load Letter Revision 1 - Serverfarm FBT.RH redline.docx; Covington - NATURAL GAS FACILITES AGREEMENT_FBT.RH redline.docx; Covington - Cost Reimbursement Agreement FBT.RH redline V 2.docx

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike and Will,

The Transportation/Sales agreement is not ready to be forwarded for review or presentation to council. The agreement will need to be updated with the gas supply

details and pricing was that information is received from the suppliers.

Attached you will find the other agreements with my comments and edits. Quick notes below:

Reimbursement agreement: edited Exhibit B to reflect the load ramp up schedule.

Load Letter:

* deleted section in Pink.
* Removed the word “guarantee” from Firm Supply. Under Force Majeure, the city cannot guarantee any volumes to any customer.
* Added Exhibit A to reflect load ramp up schedule

Facilities agreement: updated Exhibit A to match the language in load letter.

Mike, if Will agrees with my edits, I think you can forward these agreements to legal.

Rusty

Subject: Re: Draft Docs - Serverfarm

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hi Mike,
Thank you for sending these over. We don't have any material issues with the comments or edits in the documents. A couple of points/questions overall:

* Do we still need the Cost Reimbursement Agreement if Phase 1 and Phase 2 (potential) are already covered in the Facilities Agreement? Originally, we thought the CRA would precede the Facilities Agreement, but that doesn't seem necessary now. No issue if still required.
* The last open item is to update the Facilities Agreement and Load Letter with the language we reviewed to ensure alignment/consistency (see below for reference).

Let's quickly connect in the morning to make sure we are on schedule for the 9/15 council meeting. We also have a placeholder meeting in the afternoon if needed.
Thanks,
Will

Load letter language based on meeting today:

Serverfarm has provided a projected load ramp based on anticipated energy requirements. The City's natural gas infrastructure is capable of delivering up to 750 Dth/hour to the proposed data center with the implementation of Phase 1, as described below.

This capacity is contingent upon evaluation by Transco of the City Gate Meter and any associated upgrades whether may be required at the applicable intersection point. The parties will address any needed upgrades, if any, through coordinated financial, procurement, and implementation measures (Phase 2) to ensure timely delivery consistent with Serverfarm's customer requirements.

Phase 1 System Improvements (Required)

* Estimated Cost: $1.1 million (to be borne by Serverfarm).
* Firm Supply: 750 Dth/hour upon commission.
* Payment Terms:
  * $550,000 due within 14 days of execution of the Natural Gas Facilities Agreement.
  * Balance of actual project cost due within 30 days of commissioning.

Scope of Work: Mike to update

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 2inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K
*

Phase 2. Potential City Gate Meter Improvements (If needed, pending analysis and confirmation by Transco)

Pending analysis by Transco and as needed

* Estimated Cost: $50k-1.5M (to be borne by Serverfarm).
* Firm Supply: 750 Dth/hour upon commission.
* Timing: November 2026
* Payment Terms:
  * Initial remittance of $[to be determined] due within 14 days of execution of the Natural Gas Facilities Agreement.
  * Balance of actual project cost due within 30 days of commissioning.

Scope of Work:

1. Orifice Plate Swap $50K
2. Swapping of Pressure Regulation System $200K – 500K
3. Replacing the meter $1MM-1.5MM.

Mike,

Redlines attached. Only comment on the Facilities Agreement is a date change. I am concerned about the language in the Cost Reimbursement Agreement that would let serverfarm out of any reimbursement if Council does not approve the Facilities Agreement. Can we have Council approve the Facilities Agreement prior to signing the Cost Reimbursement Agreement so that is not a possibility?

Mike, See below language based on conversations over last couple of days. Go ahead and revise the scope of work items and align with Rusty.

Thanks,
Will

Serverfarm has provided a projected load ramp based on anticipated energy requirements. The City's natural gas infrastructure is capable of delivering up to 750 Dth/hour to the proposed data center with the implementation of Phase 1, as described below.

This capacity is contingent upon evaluation by Transco of the City Gate Meter and any associated upgrades whether may be required at the applicable intersection point. The parties will address any needed upgrades, if any, through coordinated financial, procurement, and implementation measures (Phase 2) to ensure timely delivery consistent with Serverfarm's customer requirements.

Phase 1 System Improvements (Required)

* Estimated Cost: $1.1 million (to be borne by Serverfarm).
* Firm Supply Guarantee: 750 Dth/hour upon commission.
* Payment Terms:
    * $550,000 due within 14 days of execution of the Natural Gas Facilities Agreement.
    * Balance of actual project cost due within 30 days of commissioning.

Scope of Work:

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 2inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K
*

Phase 2. Potential City Gate Meter Improvements (If needed, pending analysis and confirmation by Transco)

Pending analysis by Transco and as needed

* Estimated Cost: $50k-1.5M (to be borne by Serverfarm).
* Firm Supply Guarantee: 750 Dth/hour upon commission.
* Timing: November 2026
* Payment Terms:
    * Initial remittance of $[to be determined] due within 14 days of execution of the Natural Gas Facilities Agreement.
    * Balance of actual project cost due within 30 days of commissioning.

Scope of Work:

1. Orifice Plate Swap $50K
2. Swapping of Pressure Regulation System $200K – 500K
3. Replacing the meter $1MM-1.5MM.

Brandon,

I checked with our Operations team. Covington is between station 120 and 125 and closer to the Monroe. As I did not see station 125 on your list, either station 120 or the Monroe point should get you close.

Mike and Rusty,

Have yall taken any gas analysis inside the Covington system any time recently? I realize that Transco's EBB has real-time Chromatograph readings, but curious if you have any actual gas analysis. Our engine manufacturers require it to do this emissions calculations which we have to provide for air permitting and "load letter" purposes.

Thank you.

Attachments: Covington - Cost Reimbursement Agreement FBT.RH redline V 2.docx

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike,

My thoughts:

Cost Reimbursement Agreement – Exhibit A, if the system infrastructure improvements from the new engineering analysis is different, exhibit needs to be updated accordingly. I have updated Exhibit B with the ramp up schedule that Will provided as well as language to Transco's city gate review. Edit copy attached.

Transportation/Sales Agreement – This is not ready to be sent as we are waiting to hear back from suppliers and pricing options. Hope to hear back from suppliers by the end of the week and will update document as needed.

Load Letter – Are the system infrastructure improvements shown in the letter the same as what was needed based on your new engineering analysis? If not, the system infrastructure improvements data needs to be updated accordingly. As mentioned yesterday, I still think that there must be some language in this letter stating that volumes to be delivered and the timelines to deliver those volumes are subject to the Transco gate station meter analysis.

Facilities Agreement - Exhibit A needs to be updated with the system infrastructure improvements as indicated in the new engineering analysis and language regarding the Transco gate station meter analysis.

Let me know if anything needs to be changed regarding the infrastructure upgrades based on the new engineering analysis and I will update. I will also take a stab at language regarding the Transco analysis.

Frank,

Can you please review these documents and recommend any revisions? The numbers involved are still being adjusted, but I wanted to get this to you for wording review and your thoughts.

Thank you,

Mike

Hi Mike, Rusty, I've updated the drafts and we can keep editing as we get more info back from the analysis over next couple of days.

Feel free to edit/make suggestions.

Mike, I'll check back in with you tomorrow afternoon. LMK if any issues opening files etc.

Thanks

Will

Subject: gas analysis

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike and Rusty,

Have yall taken any gas analysis inside the Covington system any time recently? I realize that Transco's EBB has real-time Chromatograph readings, but curious if you have any actual gas analysis. Our engine manufacturers require it to do this emissions calculations which we have to provide for air permitting and "load letter" purposes.

Thank you.

Subject: Rough Draft - Load Letter Section

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hi Mike, See below for a draft of language that I was thinking keeps us all covered. I have not reviewed language with or legal team, but I expect could be in ballpark.

LMK your thoughts:

Serverfarm has provided a projected load ramp based on anticipated energy requirements. The City's natural gas infrastructure is capable of delivering up to 700-750 Dth/hour to the proposed data center with the implementation of Phase 1, as described below.

This 750 Dth/hour capacity is contingent upon evaluation by Transco of the City Gate Meter and any associated upgrades that may be required at that intersection point. Should such upgrades be identified, they will be addressed through coordinated financial, procurement, and implementation measures (Phase 2) to ensure timely delivery consistent with the customer's requirements.

Phase 1 System Improvements (Required)

* Estimated Cost: $1.1 million (to be borne by Serverfarm).
* Firm Supply Guarantee: 750 Dth/hour upon commission.
* Payment Terms:
    * $550,000 due within 14 days of execution of the Natural Gas Facilities Agreement.
    * Balance of actual project cost due within 30 days of commissioning.

Scope of Work:

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

Phase 2. Potential City Gate Meter Improvements (if required and with written approval from Serverfarm)

* Pending analysis by Transco and as needed
* Estimated Cost: $50k-1.5M (in addition to Phase 1 to be borne by Serverfarm).
* Firm Supply Guarantee: 750 Dth/hour upon commission.
* Timing: November 2026
* Payment Terms:
    * Initial remittance of $[to be determined] due within 14 days of execution of the Natural Gas Facilities Agreement.
    * Balance of actual project cost due within 30 days of commissioning.

Scope of Work:

1. Orifice Plate Swap $50K
2. Swapping of Pressure Regulation System $200K – 500K
3. Replacing the meter $1MM-1.5MM.

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike,

Redlines attached. Only comment on the Facilities Agreement is a date change. I am concerned about the language in the Cost Reimbursement Agreement that would let serverfarm out of any reimbursement if Council does not approve the Facilities Agreement. Can we have Council approve the Facilities Agreement prior to signing the Cost Reimbursement Agreement so that is not a possibility?

Correct, the only small change I would make is we will want minimal volumes (20ish MCF) available to support project testing etc in Apri/May 2026.

Mike and I just got off the phone, let me know if you can make 3EST for a quick sync.

Thanks

Thanks Mike, Did you get any early optimism from today's meeting based on the monthly forecast and the additional phased options discussed?

Will

Hey Will,

The contracts are at our attorney's, and I should have an updated engineering report back by early next week at the latest. I explained the urgency to have this ASAP.

Thanks,

Mike

Hi Mike, Rusty, I've updated the drafts and we can keep editing as we get more info back from the analysis over next couple of days.

Feel free to edit/make suggestions.

Mike, I'll check back in with you tomorrow afternoon. LMK if any issues opening files etc.

Thanks

Apologies if this is a bad question, but the proposed 2" crossover at the Tech College, I was wondering if that was part of the bottleneck to the 400MCF and if upgradable as well....just curious when Greg sent this over.

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!

Mike

Hi Mike, Rusty, We are digesting the latest load letter and changes, could you have any of the engineers/analysts for the volume analysis join?

We are trying to get comfortable with the details.

We are keeping the group small tomorrow to hopefully work through the analysis/docs.

Thanks

Will Whittington

Scott,

Mike and I had a call with Will with Serverfarm this afternoon. We made it as clear as I think we possibly could that based on Bruce's analysis, to get 700 Mcf/hour delivered to the data center's site, all the piping infrastructure mentioned in the letter provided to them this morning would have to be installed, even if the Transco meter was found to sufficient in size. You will see below that Will provided a new timeline for hourly volumes. It has moved 400/hour in September 2026 to 400/hour March 2027, peaking in July 2027, and then dropping off once the electric grid is updated.

After covering this, Mike said he would double check with Bruce, and reach out to Magnolia River, to see if during the April 2027 – July2027 period, if the "minimum" interconnection and system line pack would allow for the data center to take the 700/hour during this 4-month window.

Will keep you posted.

Hi Mike, and Brandon,

I think the key is to be clear on the overall 1,300 MCF system upgrade and how the Data Center usage fits. (based on my understanding)

* We are funding $1.1M to enable the system to carry 1,300 MCF (see “A” in the table below).

* With this upgrade, and based on historic 2025 winter data, the City of Covington is aligned to providing 400 MCF (Column C in Table) during peak winter (January), shown in red below to the Data Center.

* Outside of peak winter, data shows (bar charts below) reduced demand from all customers (Column B). This allows the Data Center to increase consumption above 400 MCF, ramping to 700–800 MCF by April (see yellow in table).

In summary: the 1,300 MCF upgrade establishes 400 MCF during January peaks, while enabling higher Data Center capacity in the lower-demand months leading into summer.

Let's get on a quick call to align.

2026

A. MCF Capacity

B. Customer MCF

C. Serverfarm MCF (A-B)

Subject: Re: Serverfarm

Good morning Mike. Yes, I think we had been understanding that the 400 mcf/hr constraint was only a peak winter constraint. From the other analysis we had seen, it looked like the current system could deliver much higher volumes in other months, and that's what the volume ramp in these documents reflected. And the $10 mm solution doesn't show up in time to meet the requested service date.

To clarify, is the City of Covington saying definitively that they cannot serve the volume ramp and timelines outlined in the previously attached documents? If the answer is no, it would be good to hear it cleanly, and if you need the formal request for service to come in a specific form that you can decline, we're happy to accommodate that as well.

Sorry if this feels overly direct, I just don't want anyone to waste time on solutions that won't work.

Brandon

Subject: RE: Serverfarm

Good Morning,

The attachments are in “view only” setting, can they be shared differently so that our legal review can make appropriate red line changes? Also, the Mcf hourly load requirements coincide with the required infrastructure improvements for each level of service, as stated previously by the tentative engineering analysis. It needs to be clearly understood that, unless the new engineering study shows differently, it will take the 1.1 million investment to provide the 400 Mcf per hour and the full investment and additional improvements to get to the 700+ Mcf per hour deliverable. The full demand of 700+ Mcf per hour is not reachable with the 1.1 million improvements, according to the current engineering report, or am I missing something in the report?

Mike

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we’ve already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Hi Mike, and Brandon,

I think the key is to be clear on the overall 1,300 MCF system upgrade and how the Data Center usage fits. (based on my understanding)

* We are funding $1.1M to enable the system to carry 1,300 MCF (see “A” in the table below).

* With this upgrade, and based on historic 2025 winter data, the City of Covington is aligned to providing 400 MCF (Column C in Table) during peak winter (January), shown in red below to the Data Center.

* Outside of peak winter, data shows (bar charts below) reduced demand from all customers (Column B). This allows the Data Center to increase consumption above 400 MCF, ramping to 700–800 MCF by April (see yellow in table).

In summary: the 1,300 MCF upgrade establishes 400 MCF during January peaks, while enabling higher Data Center capacity in the lower-demand months leading into summer.

Let's get on a quick call to align.

Good morning Mike. Yes, I think we had been understanding that the 400 mcf/hr constraint was only a peak winter constraint. From the other analysis we had seen, it looked like the current system could deliver much higher volumes in other months, and that's what the volume ramp in these documents reflected. And the $10 mm solution doesn't show up in time to meet the requested service date.

To clarify, is the City of Covington saying definitively that they cannot serve the volume ramp and timelines outlined in the previously attached documents? If the answer is no, it would be good to hear it cleanly, and if you need the formal request for service to come in a specific form that you can decline, we're happy to accommodate that as well.

Sorry if this feels overly direct, I just don't want anyone to waste time on solutions that won't work.

Brandon

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we’ve already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we've already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Hi Mike, and Brandon,

I think the key is to be clear on the overall 1,300 MCF system upgrade and how the Data Center usage fits. (based on my understanding)

* We are funding $1.1M to enable the system to carry 1,300 MCF (see “A” in the table below).

* With this upgrade, and based on historic 2025 winter data, the City of Covington is aligned to providing 400 MCF (Column C in Table) during peak winter (January), shown in red below to the Data Center.

* Outside of peak winter, data shows (bar charts below) reduced demand from all customers (Column B). This allows the Data Center to increase consumption above 400 MCF, ramping to 700–800 MCF by April (see yellow in table).

In summary: the 1,300 MCF upgrade establishes 400 MCF during January peaks, while enabling higher Data Center capacity in the lower-demand months leading into summer.

Let's get on a quick call to align.

2026

A. MCF Capacity

B. Customer MCF

C. Serverfarm MCF (A-B)

Subject: Re: Serverfarm

Good morning Mike. Yes, I think we had been understanding that the 400 mcf/hr constraint was only a peak winter constraint. From the other analysis we had seen, it looked like the current system could deliver much higher volumes in other months, and that's what the volume ramp in these documents reflected. And the $10 mm solution doesn't show up in time to meet the requested service date.

To clarify, is the City of Covington saying definitively that they cannot serve the volume ramp and timelines outlined in the previously attached documents? If the answer is no, it would be good to hear it cleanly, and if you need the formal request for service to come in a specific form that you can decline, we're happy to accommodate that as well.

Sorry if this feels overly direct, I just don't want anyone to waste time on solutions that won't work.

Brandon

Good Morning,

The attachments are in "view only" setting, can they be shared differently so that our legal review can make appropriate red line changes? Also, the Mcf hourly load requirements coincide with the required infrastructure improvements for each level of service, as stated previously by the tentative engineering analysis. It needs to be clearly understood that, unless the new engineering study shows differently, it will take the 1.1 million investment to provide the 400 Mcf per hour and the full investment and additional improvements to get to the 700+ Mcf per hour deliverable. The full demand of 700+ Mcf per hour is not reachable with the 1.1 million improvements, according to the current engineering report, or am I missing something in the report?

Mike

Scott,

I think this is very good. Hopefully seeing it in writing will be clear enough for them. In the call on Wednesday, Brandon mentioned that according to “their” evaluation and flow models of the pressures on Transco and the Transco city gate, they felt that the city gate meter would handle this additional gas load. I told them even if the Transco gate was large enough to cover this additional load, that we still had to have the infrastructure improvements in phase 2 completed to deliver 700 Mcf to the site. I thought they understood that, but apparently, I was wrong based on the email replies this morning.

Mike,

For the phase 2 part, the biggest time killer was the Transco meter upgrade if needed. Providing that there is no need for a Transco meter upgrade/replacement, what is your estimated timeline to complete the infrastructure improvements in both phase 1 and 2. Could the gas lines be completed ahead of their 9/11/2026 start up?

Also, after your review of Scott’s edits, will you be forwarding this letter?

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Good Morning,

The attachments are in “view only” setting, can they be shared differently so that our legal review can make appropriate red line changes? Also, the Mcf hourly load requirements coincide with the required infrastructure improvements for each level of service, as stated previously by the tentative engineering analysis. It needs to be clearly understood that, unless the new engineering study shows differently, it will take the 1.1 million investment to provide the 400 Mcf per hour and the full investment and additional improvements to get to the 700+ Mcf per hour deliverable. The full demand of 700+ Mcf per hour is not reachable with the 1.1 million improvements, according to the current engineering report, or am I missing something in the report?

Mike

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we’ve already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Hi Mike, and Brandon,
I think the key is to be clear on the overall 1,300 MCF system upgrade and how the Data Center usage fits. (based on my understanding)

* We are funding $1.1M to enable the system to carry 1,300 MCF (see “A” in the table below).
* With this upgrade, and based on historic 2025 winter data, the City of Covington is aligned to providing 400 MCF (Column C in Table) during peak winter (January), shown in red below to the Data Center.
* Outside of peak winter, data shows (bar charts below) reduced demand from all customers (Column B). This allows the Data Center to increase consumption above 400 MCF, ramping to 700–800 MCF by April (see yellow in table).

In summary: the 1,300 MCF upgrade establishes 400 MCF during January peaks, while enabling higher Data Center capacity in the lower-demand months leading into summer.
Let's get on a quick call to align.

2026	A. MCF Capacity	B. Customer MCF	C. Serverfarm MCF (A-B)
May	1,300	550	750
June	1,300	550	750
July	1,300	550	750
August	1,300	550	750
September	1,300	550	750
October	1,300	600	700
November	1,300	700	600
December	1,300	800	500
January	1,300	900	400
February	1,300	800	500
March	1,300	700	600
April	1,300	600	700

Subject: Re: Serverfarm

Good morning Mike. Yes, I think we had been understanding that the 400 mcf/hr constraint was only a peak winter constraint. From the other analysis we had seen, it looked like the current system could deliver much higher volumes in other months, and that’s what the volume ramp in these documents reflected. And the $10 mm

solution doesn't show up in time to meet the requested service date.

To clarify, is the City of Covington saying definitively that they cannot serve the volume ramp and timelines outlined in the previously attached documents? If the answer is no, it would be good to hear it cleanly, and if you need the formal request for service to come in a specific form that you can decline, we're happy to accommodate that as well.

Sorry if this feels overly direct, I just don't want anyone to waste time on solutions that won't work.

Brandon

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we’ve already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Hi Mike, and Brandon,
I think the key is to be clear on the overall 1,300 MCF system upgrade and how the Data Center usage fits. (based on my understanding)

* We are funding $1.1M to enable the system to carry 1,300 MCF (see "A" in the table below).
* With this upgrade, and based on historic 2025 winter data, the City of Covington is aligned to providing 400 MCF (Column C in Table) during peak winter (January), shown in red below to the Data Center.
* Outside of peak winter, data shows (bar charts below) reduced demand from all customers (Column B). This allows the Data Center to increase consumption above 400 MCF, ramping to 700–800 MCF by April (see yellow in table).

In summary: the 1,300 MCF upgrade establishes 400 MCF during January peaks, while enabling higher Data Center capacity in the lower-demand months leading into summer.
Let's get on a quick call to align.

Subject: Re: Serverfarm

Good morning Mike. Yes, I think we had been understanding that the 400 mcf/hr constraint was only a peak winter constraint. From the other analysis we had seen, it looked like the current system could deliver much higher volumes in other months, and that's what the volume ramp in these documents reflected. And the $10 mm solution doesn't show up in time to meet the requested service date.

To clarify, is the City of Covington saying definitively that they cannot serve the volume ramp and timelines outlined in the previously attached documents? If the answer is no, it would be good to hear it cleanly, and if you need the formal request for service to come in a specific form that you can decline, we're happy to accommodate that as well.

Sorry if this feels overly direct, I just don't want anyone to waste time on solutions that won't work.

Brandon

Good Morning,

The attachments are in "view only" setting, can they be shared differently so that our legal review can make appropriate red line changes? Also, the Mcf hourly load requirements coincide with the required infrastructure improvements for each level of service, as stated previously by the tentative engineering analysis. It needs to be clearly understood that, unless the new engineering study shows differently, it will take the 1.1 million investment to provide the 400 Mcf per hour and the full investment and additional improvements to get to the 700+ Mcf per hour deliverable. The full demand of 700+ Mcf per hour is not reachable with the 1.1 million improvements, according to the current engineering report, or am I missing something in the report?

Mike

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Mike Jewell

Mike

I know this is frustrating to have to answer the same question over and over. I am putting very specific language in the “letter” that will hopefully clear it up.

But – the direct answer to this email is:

“The City is confident it can deliver 400/Dth/hour after completion of what we call Phase 1. The cost is estimated at $1.1 million but actual cost will be borne by Serverfarm. The City WILL NOT guarantee any volumes above 400/Dth/hour until Phase 2 in complete. Covington’s peak days could occur anytime between November 1 and April 15th. The City will provide an Interruptible service for volumes above 400/Dth/hour before Phase 2 is completed on a best efforts basis. There is no scenario to provide firm volumes above 400/Dth/hour before phase 2 is completed.”

Something similar to that might help.

Scott

Good morning Mike. Yes, I think we had been understanding that the 400 mcf/hr constraint was only a peak winter constraint. From the other analysis we had seen, it looked like the current system could deliver much higher volumes in other months, and that’s what the volume ramp in these documents reflected. And the $10 mm solution doesn’t show up in time to meet the requested service date.

To clarify, is the City of Covington saying definitively that they cannot serve the volume ramp and timelines outlined in the previously attached documents? If the answer is no, it would be good to hear it cleanly, and if you need the formal request for service to come in a specific form that you can decline, we're happy to accommodate that as well.

Sorry if this feels overly direct, I just don't want anyone to waste time on solutions that won't work.

Brandon

Good Morning,

The attachments are in "view only" setting, can they be shared differently so that our legal review can make appropriate red line changes? Also, the Mcf hourly load requirements coincide with the required infrastructure improvements for each level of service, as stated previously by the tentative engineering analysis. It needs to be clearly understood that, unless the new engineering study shows differently, it will take the 1.1 million investment to provide the 400 Mcf per hour and the full investment and additional improvements to get to the 700+ Mcf per hour deliverable. The full demand of 700+ Mcf per hour is not reachable with the 1.1 million improvements, according to the current engineering report, or am I missing something in the report?

Mike

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we've already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Subject: FW: Serverfarm
Attachments: Covington - NATURAL GAS FACILITES AGREEMENT V.3.docx; City of Covington Load Letter - Serverfarm .docx; Covington - Cost Reimbursement Agreement.docx; Severfarm Mcf Projections Highlight.PNG

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike,

I see that they have added in Mcf hourly load requirements. I want to make sure that they we are clear and they understand that Covington cannot guarantee those volumes without the necessary investment in infrastructure. My gut feelings are that they think they can get 700 Mcf per hour delivered to the site with only the minimum investment and minimum infrastructure upgrades estimated at $1.1 million. This minimum investment will only get the 400 Mcf per hour delivered to the site.

To get 700 Mcf per hour delivered to the site, if I am reading Bruce's analysis correctly, the minimum infrastructure improvements needed is as follows. And this is assuming that the city gate station with Transco does not have to be replaced.

The new infrastructure at $1.1 million

Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line

to the existing 6-inch Tap-line at three locations on Hwy 81. $150K

Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E.

Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K

Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the

customer's meter station. $450K

Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd

project site. $300K

PLUS

Additional infrastructure of $7.1 million:

Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point

to the intersection of Hwy 81 and Hwy 142. $7MM

Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81

so that all the tap-lines operate at the same pressure. $100K

Total investment of $8.2 million.

Question: Can the City of Covington have all this infrastructure installed in 12 months to meet their Data Hall Phases and Mcf Projections shown on the attached Projection highlight slide.

On the high light slide, you will also see they are only planning to use natural gas from 9/11/2026 until Fall of 2027 when they transition to the utility grid. Only 12 months or so.

Based on your answer, I think we need to respond with this information above for clarity and your timeline to complete.

Also, due to the expected short-term use of natural gas, I would also think we really need to discuss gas supply, (city supplies vs transport).

If you would like to get on a call to discuss, let me know and we will make that happen.

Rusty

Hi Mike,

Please find attached three documents for your review and feedback:

* Cost Reimbursement Agreement
* Natural Gas Facilities Agreement
* City of Covington Load Letter (Proposed)

The Load Letter is a new addition alongside the three agreements we've already been discussing. It will help us stay aligned ahead of the City Council submission on 9/9 and the approval meeting on 9/15.

Ideally, we can get alignment on the project completion and the peak/seasonal language by 9/3. With those items settled, I believe everything else will fall into place smoothly and set us up for a clean City Council submission.

Looking forward to your thoughts so we can keep moving this forward together. I'll touch base with you tomorrow before the long weekend, and will also send you the Natural Gas Transportation Agreement, which is still being reviewed.

Thanks!

Will

Subject: RE: City of Covington tap and meter

Brandon,

Thanks for the high-level details this morning.

I discussed the request with Christine Martinovich which is the customer development Rep for Covington and MGAG. She will reach out with next steps which might involve having a meeting with our FEED team and some of our measurement SME's to understand the request completely.

If there are specific questions that you have about the current meter station, please send them and our team can start reviewing them.

Thanks,

CAUTION! EXTERNAL SENDER STOP. ASSESS. VERIFY!! If suspicious, STOP and click the Phish Alert Button

Hello Carlos,

Good to talk this morning. As we discussed on the phone, we're working with a customer and the City of Covington and MGAG on a project in Covington, GA that would require some meter station modifications coming off of Transco. We'd like to connect with the right person at Transco to help us understand the capacities of the current tap, meter set, and pressure regulation. Timing is tight on this project, and we don't think there is time to install a new tap on Transco and loop Covington's system all the way back to the project site, but we think there may be a way to solve for the customers requirements via some upgrades to Covington's system and some modification to Transco's existing pressure regulation and measurement set up. Could you help direct us to the right folks?

Thanks in advance.

Gentlemen,

Attached are copies of the Transportation Agreement and Facilities Agreement previously reviewed. If we need an additional reimbursement agreement in addition to the Facilities agreement to cover engineering costs, now is the time to include it. Please review the agreements, and once we receive signed copies, I will place them on the Council agenda. If there are any revisions, including the timing and seasonal volumes, please forward them for our attorneys' review.

Thank you,

Mike

Subject: Serverfarm - City of Covington Gas

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Thanks again for taking the time today!

Below are the notes and action items captured. Please reach out with any questions/comments/clarifications.

Key Discussion Points
1. Project Approval & Next Steps

* Customer board approved project – moving forward into execution phase. Timing Critical
* Main focus: finalizing agreements, reimbursement structure, timelines, and mitigation strategies.

2. Agreements

* Reimbursement Agreement: Needed to cover pass-through costs. Estimated ~$1.1M, possibly less.
* Draft facilities agreement already circulated by Rusty. Needs city attorney review and vetting.
* Council meeting on Sept 15, with a Sept 9 deadline for submission of finalized documents.

3. Timeline and Volume Language in Contracts

* Delivery commitment: 400 MCF as minimum in peak winter months.
* Targeting 6–8 month completion timeline, with “not to exceed” language in agreements.
* Flexibility for monthly/seasonal volumes (400 MCF Jan ? 600 MCF Nov-Mar).

4. Power Availability

* ~1 MW required for site construction by April 2026.
* Georgia Power serves site; inquiry to confirm availability and scalability. Brad to engage Georgia Power contacts.

5. Mitigation Engineering & Modeling

* City engineers to model high-pressure system and confirm deliverability scenarios (400–800 MCF).
* Verification needed for Transco tap and distribution line pressures (currently regulated to ~450 PSI).
* Potential modifications discussed: teeing off before regulator, adjusting pressure, modeling impacts on city distribution system.

6. Mitigation Planning

* Peak-day mitigation (CNG staging) required for rare worst-case demand scenarios.
* Confirmation needed that base 400 MCF is protected while additional volumes can be siphoned off.

7. Mitigation Land/Staging Needs

* Ideal parcel: ~5 acres near Transco tap for CNG staging.
* Controlled by equestrian trust (Lucy Calhoun). Initial outreach made, not fully closed off.
* Backup option: City of Lawrenceville’s fenced parcel (~1 acre) with turnaround access. May require supplementary staging elsewhere.

Action Items:
Item
Owner
Due Date
Status
Follow-Ups
Mike, Will
Sent
Will to send draft contract language to address project timing and seasonal volumes; Mike confirm attorney review
Reimbursement Agreement
Rusty (draft), Mike (attorney review), Will (Serverfarm Signatures)
3-Sep-25
Draft circulated, awaiting attorney review, Will to get signatures by next week.
Service Agreements
Mike, Rusty, Will
5-Sep-25
Finalize project timeline and monthly/seasonal MCF language
Power Availability
Brad (Serverfarm), Georgia Power
5-Sep-25
Engage GA Power PM for 1 MW construction load
Finalize Agreement Language
Mike, Rusty, Will
9-Sep-25
Submit documents to City Council for Review
Land/Staging Strategy
Jason (trust outreach), Brandon (layout input)
9-Sep-25
Initial outreach made, alternatives identified
City Council Approval
Mike
15-Sep-25
Confirm approval from City Council

Subject: Proposed Added Language - Serverfarm

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hi Mike, See if the below language makes sense for adding a time dimension to the 1.1M spend and a bell curve for the MCF:

1. The Parties agree that the completion of the project listed in Exhibit A shall occur no later than [5/1/2026], unless otherwise extended in writing by mutual agreement of the Parties. Timely completion of Exhibit A is a material obligation of this Agreement.
2. The Parties agree that the firm natural gas capacity shall be allocated as follows: 400 MCF as a floor in the peak winter months, with a firm distribution as follows for the winter months of November 2026 through March 2027:

* 600MCF per hour in November
* 500MCF per hour in December
* 400MCF per hour during January
* 500 MCF per hour during February
* 600 MCF per hour during March
* From April through October, the firm capacity shall be 750 MCF per hour.

Mike

Am I reading that they have come to the conclusion that this is the path forward?

If so, I think engaging your engineer to get a formal project report based on Bruce's initial work will provide the details needed for "Exhibit A". Once that is complete, the agreement Rusty provided can be updated. We will include a deposit and draw schedule and commit to only pass through actual final costs.

Other than those details, I think this agreement is at a good point.

Scott

Good morning,

I received a call from Will with Serverfarm this morning and he is wanting to know what we need to do to move forward with the 1.1 and 11 million proposals. Does the Gas Authority have an agreement that we can draft for the project and send to our City attorney for review?

Thanks,

Mike

Mike

Am I reading that they have come to the conclusion that this is the path forward?

If so, I think engaging your engineer to get a formal project report based on Bruce's initial work will provide the details needed for "Exhibit A". Once that is complete, the agreement Rusty provided can be updated. We will include a deposit and draw schedule and commit to only pass through actual final costs.

Other than those details, I think this agreement is at a good point.

Scott

Mike,

Attached is an agreement that I forwarded back on 7/25. I also sent a transportation agreement that Frank has already returned to you with his comments, so you may have already forwarded this one to him as well.

Good morning,

I received a call from Will with Serverfarm this morning and he is wanting to know what we need to do to move forward with the 1.1 and 11 million proposals. Does the Gas Authority have an agreement that we can draft for the project and send to our City attorney for review?

Thanks,

Mike

In case it's helpful for pushing on Transco, we ran some hydraulic scenarios in Promax. It looks like a 4" tap coming off an 800# Transco line should be able to deliver 1300 mcf/hr to the city meter + 300 mcf/hr to a peaking facility, under the below assumptions/arrangement. The sooner we could swedge up to 6" after the 4" Transco tap, the better obviously.

Hi all,

Thank you all for the time today. I really appreciate the open and collaborative discussion.

Below are the notes and action items I captured from our discussion.

I've also included the peak volume gap days analysis below for reference (thanks, Rusty!). Based on this analysis, the overall risk is small, but it is still present. We'll need to have clear and well-prepared mitigation plans in place.

Key actions include closely tracking the Transco meter tap progression. We will need some clarity asap to assure the mitigation plan will work. Brandon and I will also begin drafting the peak mitigation playbook and plan to review it with the group next week.

Thanks,

Will

Action Item

Owner

Next Step

Draft reimbursement agreement for engineering study

Rusty & Mike

Circulate draft for review

Develop CNG mitigation playbook (trucks, staging, land). Document plan to address largest gap on record.

Brandon, Will

Model truck count and staging needs

Evaluate parcels for CNG yard staging

Jason

Triangle shaped parcel across the road will work great.

Track Transco meter/tap review request (submitted Aug 14)

Rusty, Mike, Brandon

Await October feedback; Brandon to seek informal input

Finalize delivered gas supply agreement

Rusty, Mike

Vet with city attorney

Will Whittington

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Thank you for sending this over. From my review, it appears that as long as the code referenced on Sheet F0.00 are updated, we should be in good shape for the interior demolition permit. Can you confirm if that is correct?

I understand that some of the other code callouts pertain specifically to the LDP and the building permit, which our design team will address in the upcoming revisions for those permits.

Please let me know if there are any additional updates required specifically for the interior demolition permit.

Thank you for your time today.

Subject: Re: Serverfarm Covington - Interior Demo Permit

Hello Mac,

The concerns I had initially were based on incorrect code references. Other points of concern were addressed during our meeting today. Below are the basic notes I intended to bring up for discussion:

* Page 217 F0.00 – Code update sites, State Rules and Regulations 120-3-3, https://rules.sos.ga.gov/gac/120 <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2frules.sos.ga.gov%2fgac%2f120&c=E,1,GhXxKBpFlfe4njgOGoJ6VJ0Ljs6sO8g0o32h2NBjkUt95ogY9KoL9JWtxFqUs0fQtyI5feuFBHLSRtKDaHbcLNnFLqyoNF--DAZJJr10lmZuICXcV42Z4Iw,&typo=1>

* IFC 2018, LSC 2024, NFPA 75 2024, NFPA 76 2024

* NFPA 14 – Fire Department hose connections: 150 ft (non-sprinkler) and 200 ft (sprinklered buildings)

* NFPA 111 2025 – Energy Storage Systems

* ERRC/BDA – Radio coverage requirements

* Access – Gates, roads, FDC’s, hydrants, etc.

* Exit Discharge – Clear of HVAC and other obstructions

* Hose Deployment – Feasibility of deploying hose lines from fire apparatus roads into the building

Also, please ensure that your design complies with all applicable codes and standards (noting that the items above may not be applicable in every case or all-inclusive).

Please let me know if you would like to review any of these items further.

Thank you,

Robert Canady,

Chief Canady,

I appreciate your time today. Regarding the interior demo permit application it sounds like we need to get some additional fire codes updated that came up on your review on our revision. If you don't mind letting me know what codes need to get updated so we can get it turned around and submitted that would be great.

Give me a call if you have any questions.

Thanks,

Attachments: Covington 600 Hour Plus Load Curve.pdf

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

All,

Using the data hall phases and Mcf projections provided by Will last week, I have run daily numbers based on 600 per hour load, as well as the 700 and 800 per hour loads for the winter months of 2023-24 and 2024-25. Load curve at 600 per hour shows 32 days needing back up fuel for 2024-25.

As for the key data and information requests:

1. The timelines for providing 400 per hour (1,300 Mcf/hr system total) and 700 Mcf per (1,600 Mcf/hr system total) have not changed.
    a. 400 Mcf/hr – 6 – 8 months
    b. 700 Mcf/hr or greater – 24 months +.
2. Impact of lowering Serverfarm pressure requirements.
    a. Engineering study required to verify.
        i. Initial thoughts - Lowering pressure requirements do not change the hourly volume needed or being requested. Lower pressure means larger pipe diameter and higher material costs.

Thanks,

Rusty

Hi all, Thank you for your time yesterday — we appreciate the strong collaboration across all the teams.

Below are the action items & notes captured during the call. I've also attached the slide deck for your review and reference.

To maintain alignment and keep the momentum, I will set up a recurring project touchpoint every Wednesday.

Best regards,

Will

Action Item

Owner(s)

Notes / Next Steps

Provide detailed monthly MCF capacity curve (Oct–Mar)

City of Covington / Gas Authority (Rusty, Mike)

To show seasonal variation and peak-day limits through prior historic winter. 800MCF capacity expected to be met via 1,300 upgrade in non peak months (April-October). For risk and mitigation planning.

Fund and initiate engineering study to refine capacity limits and explore optimization of 1.1M upgrade

Serverfarm (Will) with Covington (Mike)

Cost-reimbursement agreement to be drafted by City.

Send Google pin / location data for Transco tap and surrounding property

Mike

For CNG/compression feasibility review by Brandon.

Evaluate CNG trucking feasibility for peak shaving

Brandon (Volta Grid)

Assess logistics, truck count, costs; coordinate with Will for peak-day needs.

Confirm delivered gas supply vs. transport-only strategy

Brandon, Greg

Decide whether to source gas via City ($1.40/Dth +) or self-procure and transport.

Provide meter station ID for Transco interconnect

Rusty

Needed for transport arrangement planning.

Review and finalize necessary agreements (transport, facilities, possible delivered supply)

Mike, Rusty, Brandon, Greg

Ensure correct agreements are in place based on chosen supply method.

Will Whittington

Subject: Serverfarm Capacity Curve and Days of Need Graphs
Attachments: Covington Peak Day Load Curves.pdf

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Mike and Rob,

Attached are graphs showing the load curve for 2023 – 2024 and 2024 – 2025. Updated information and graphs to show the 700/hour figures as well as the "new" 800/hour number they threw our way yesterday. Also showing the number of days for each month in the corresponding winter seasons for both 700 and 800/hour use. All graphs are showing the incremental needs above the $1.1 million upgrade to get them the 400/hour.

We spoke yesterday afternoon about Brandon's mention of CNG. With his question regarding pressure at or near the city gate station for compression, I think we need to discuss this further as I do not see this as on option for them, particularly with them thinking they can pull this supply off Covington's system. This would still be the 700 – 800/hour through the Transco meter regardless.

I will work on a delivered supply/sales agreement and get that to you as soon as I can.

Let me know your thoughts and if you have any questions on the attachments. As they want to have a recurring update on Wednesdays, if there are no changes that you see needed, I will forward first of the week.

Regards,

From: Brandon Seale <Brandon.Seale@voltagrid.com>

Thanks for the clarification, Rusty.

Based on our discussion with ServerFarm yesterday after the call, I think we would like to pursue a delivered molecule deal structure. Hopefully this makes your life a little easier for scheduling purposes, and maybe even gives you a little more purchasing power at the Transco point.

Greg, Jason, and Brandon,

I wanted to follow up on our conversation yesterday afternoon regarding the question of the Gas Authority volumetric transportation charge. In reflecting on the conversation, I believe I stated that the Gas Authority charge was part of the distribution margin. If I did, I apologize for the oversight, but the Gas Authority charge is in addition to the city distribution charge. The Gas Authority charge is reviewed and set annually with the Gas Authority's approved budget and changes are made each January. The current Gas Authority charge is 6.8 cents per Dth.

Regards,

Rusty

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Hi all, Thank you for your time yesterday — we appreciate the strong collaboration across all the teams.
Below are the action items & notes captured during the call. I've also attached the slide deck for your review and reference.
To maintain alignment and keep the momentum, I will set up a recurring project touchpoint every Wednesday.
Best regards,
Will

Action Item	Owner(s)	Notes / Next Steps
Provide detailed monthly MCF capacity curve (Oct–Mar)	City of Covington / Gas Authority (Rusty, Mike)	To show seasonal variation and peak-day limits through prior historic winter. 800MCF capacity expected to be met via 1,300 upgrade in non peak months (April-October). For risk and mitigation planning.
Fund and initiate engineering study to refine capacity limits and explore optimization of 1.1M upgrade	Serverfarm (Will) with Covington (Mike)	Cost-reimbursement agreement to be drafted by City.
Send Google pin / location data for Transco tap and surrounding property	Mike	For CNG/compression feasibility review by Brandon.
Evaluate CNG trucking feasibility for peak shaving	Brandon (Volta Grid)	Assess logistics, truck count, costs; coordinate with Will for peak-day needs.
Confirm delivered gas supply vs. transport-only strategy	Brandon, Greg	Decide whether to source gas via City ($1.40/Dth +) or self-procure and transport.
Provide meter station ID for Transco interconnect	Rusty	Needed for transport arrangement planning.
Review and finalize necessary agreements (transport, facilities, possible delivered supply)	Mike, Rusty, Brandon, Greg	Ensure correct agreements are in place based on chosen supply method.

Greg, Jason, and Brandon,

I wanted to follow up on our conversation yesterday afternoon regarding the question of the Gas Authority volumetric transportation charge. In reflecting on the conversation, I believe I stated that the Gas Authority charge was part of the distribution margin. If I did, I apologize for the oversight, but the Gas Authority charge is in addition to the city distribution charge. The Gas Authority charge is reviewed and set annually with the Gas Authority's approved budget and changes are made each January. The current Gas Authority charge is 6.8 cents per Dth.

Regards,

Rusty

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Scott and folks, would you estimate in-service timelines for the 1,300 and 1,600 mcf/hr upgrade scenarios?

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Joel,

Attached is a version of a Large Load Electric Service Agreement that we leveraged with another MEAG Participant. Whereas this isn't a final version, it will give you and your team something to begin chewing on.

We also know that if this is a prerequisite for MEAG to continue with their process, we'll want to craft language that makes this agreement contingent upon MEAG providing the full capacity required for the proposed load.

Please let me know if you have any questions. (Also, I'm not sure if I got Tres' email correct.)

Thanks,

Attachments: City of Covington - Contract for Electric Power - To Joel.docx

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Joel,

Attached is a version of a Large Load Electric Service Agreement that we leveraged with another MEAG Participant. Whereas this isn't a final version, it will give you and your team something to begin chewing on.

We also know that if this is a prerequisite for MEAG to continue with their process, we'll want to craft language that makes this agreement contingent upon MEAG providing the full capacity required for the proposed load.

Please let me know if you have any questions. (Also, I'm not sure if I got Tres' email correct.)

Thanks,

Brad Scheidt, PE

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

The Gas Authority is pulling together the agreement and rates that Frank has reviewed to send to Serverfarm (hopefully by tomorrow). After their review and approval, I will put it on the next Council agenda for approval. The Gas Authority has confirmed they are in talks with Transco about timeline and costs associated with our request.

In addition to my previous response, we will have to maintain the infrastructure and service lateral for the years to come after they stop using our gas. The $0.20 margin in my opinion is justifiable. Again, the decision is yours as where to set the margin. The Gas Authority can easily adjust the paperwork for the proposal.

Thanks,

Mike

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Good morning, Michael and Judy.

We are the MEPFP engineers of record for the Serverfarm data center project at 10835 Hazelbrand Road NE. Part of our design is to have 34.5kV primary to 480V secondary oil filled transformers installed inside the electrical rooms within the building envelope. We would like to get the respective parties on your team on a call to discuss oil spill containment requirements within these rooms.

Could you please provide me with some available meeting windows you and your team have in the coming week to schedule a Teams meeting to review this design?

Thanks in advance,

TIM LECHTENBERG

In addition to my previous response, we will have to maintain the infrastructure and service lateral for the years to come after they stop using our gas. The $0.20 margin in my opinion is justifiable. Again, the decision is yours as where to set the margin. The Gas Authority can easily adjust the paperwork for the proposal.

Thanks,

Mike

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas

supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

In addition to my previous response, we will have to maintain the infrastructure and service lateral for the years to come after they stop using our gas. The $0.20 margin in my opinion is justifiable. Again, the decision is yours as where to set the margin. The Gas Authority can easily adjust the paperwork for the proposal.

Thanks,

Mike

Good Afternoon,

What made you decide to go with the highest margin?

Tres

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Subject: RE: Serverfarm - City of Covington gas

That was Scott's recommendation that he previously told them as an estimate due to the short amount of time that they plan to use natural gas at their facility. The project requires extensive work on our part to provide the gas needed only to be used for a very short and specific time span. If they were going to be a long-term customer or use it more than up to 2027, I would feel more comfortable reducing the margin. We can set the rate anywhere you wish.

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Subject: RE: Serverfarm - City of Covington gas

In addition to my previous response, we will have to maintain the infrastructure and service lateral for the years to come after they stop using our gas. The $0.20 margin in my opinion is justifiable. Again, the decision is yours as where to set the margin. The Gas Authority can easily adjust the paperwork for the proposal.

Thanks,

Mike

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Rusty,

I did talk with Greg. I told him our Attorney had red lined the reimbursement agreement and it was forwarded back. We need both agreements ready to put on the Council agenda before noon on the 11th. I had an in-person meeting with Serverfarm and discussed potential for Elks Club Road project as well. I talked with Scott T about the meetings and updated him that afternoon.

Thanks,

Mike

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Here are best guesses for each scenario once agreements are completed and approved.

1,300 mcf/hour – 6 – 8 months.

1,600 mcf/hour – 16 – 24 months. (wild card here is the interstate pipeline's timeline for the new take point meter)

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Hello Jason

Sorry for the delay. I have been in meetings the last couple of days and will be not have availability until Thursday between 12 and 3 eastern.

Thanks

Scott

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Subject: RE: Serverfarm - City of Covington gas

In addition to my previous response, we will have to maintain the infrastructure and service lateral for the years to come after they stop using our gas. The $0.20 margin in my opinion is justifiable. Again, the decision is yours as where to set the margin. The Gas Authority can easily adjust the paperwork for the proposal.

Thanks,

Mike

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Subject: Re: Serverfarm - City of Covington gas

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

VP - Acquisitions & Asset Mgmt.

Subject: RE: Serverfarm - City of Covington gas

That was Scott's recommendation that he previously told them as an estimate due to the short amount of time that they plan to use natural gas at their facility. The project requires extensive work on our part to provide the gas needed only to be used for a very short and specific time span. If they were going to be a long-term customer or use it more than up to 2027, I would feel more comfortable reducing the margin. We can set the rate anywhere you wish.

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty

Mike and Rob,

I was out of the office last week on PTO, so I wanted to follow up with you guys on this email. Did either of you have any communications with Greg or Brandon last week regarding the data center project. I do not recall seeing an email response but just checking to see if there were any calls made or received.

Regarding Brandon's question #1. Bruce's system analysis was based on 18,000 Dth/day peak. This past winter, Covington exceeded 16,000 Dth/day on January 8th, 20th, 21st, 23rd, 24th, February 20th. To answer his question regarding turning off interruptible loads, did you guys curtail or limit interruptible customer's daily use on these days? I am assuming you did.

Question #2. Unfortunately, we can only give him historical numbers of OFOs and cannot predict future events of how many days are at risk. "Priority" or "enhanced" service to ensure gas supply of 700 Mcf/hr will require the infrastructure upgrades. Nothing has changed here, correct?

For this past winter, the number of days I showed a need at 700 Mcf/hr was 63. (Nov – 5, Dec – 17, Jan – 28, Feb – 12, Mar – 5)

At 600 Mcf/hr on peak days, the number of days reduced to 32. (Nov – 0, Dec – 6, Jan – 20, Feb – 6, Mar – 0).

Scott, Rodney, Chris, did any of you hear from them?

Thanks,

Rusty

Subject: Re: Serverfarm - City of Covington gas

Hey Rusty, thanks for the info. Two follow ups:

1. I just want to make sure you're turning off all your interruptible loads first in these scenarios. Serverfarm is requesting firm for this project. If there's any concept of "priority" or "enhanced" firm I think they'd be open to that.

2. How many days are being curtailed in which months? The final months are critical (winter 26-27) and we're trying to see how many days in those months are at risk. The granularity is important…right number the numbers aren't looking good.

Brandon

Subject: RE: Serverfarm - City of Covington gas

Greg,

Following up on our conversation from earlier this week and review of previously shared information below.

If only going with phase one ($ 1.1 million system improvements to get to 400 Mcf/hour), how many days did we see a backup fuel would be needed during peak times if 700 Mcf/day was requested. Initial analysis showed 64 days of need during this past winter. As you requested and based on your comments that during peak times the hourly gas load could be reduced to 600 Mcf/hour, my analysis is showing the number of days of needing a backup fuel source reduced to 32.

I checked with engineering to see if this reduction would change engineering and scope of work. Based on his review, even with this reduction, the engineering models, infrastructure upgrades, and cost estimates to get to each level of hourly flow has not changed. 600 – 700 Mcf/hour will require both the estimated $1.1 million and $11.0 million scopes of work to be completed.

The city is reviewing and vetting the facilities agreement through staff and the city attorney. As soon as they have completed their review and edits, we will forward for your consideration.

Thanks, and have a great weekend!

Rusty

Covington Team,

After discussing with the customer, we'd like to move forward. Some thoughts:

1. We'd like to target the execution of definitive agreements in the next 2-4 weeks – sometime between July 1 and July 15.
2. The customer needs an in-service date for the $1.1 MM before the end of this year. Can we work toward that on these timelines?
3. We'd propose to work the $1.1 and $11.0 MM scopes under separate document sets, particularly so as to not slow down the $1.1 MM scope.
4. With respect to a final delivered cost, can we present you a proposal for what we feel like an all-in delivered rate should be?

Do you have draft reimbursement agreements and gas purchase contracts (or NAESB's and confirms?) that we could start reviewing as soon as possible. Please call if easier.

Best,

Brandon Seale

Subject: RE: Serverfarm - City of Covington gas

Here are the results of the preliminary engineering study.

The following Gas Loads and pressure requirement for the proposed customer at 10835 Hazelbrand Road were provided:

* Total load 9.6 MMCF/day (400 MCF/Hr.)
* Peak hourly load 692 MCF/Hr.
* Required Delivery Pressure > 200 PSIG*

*Brandon Seale informed me that they could probably operate with a delivery pressure of 150 PSIG.

I looked at the system improvements required to handle the following customer demands:

* Customer demand of 1,300 MCF/Hour (900 MCF/hour plus 400 MCF/hour)
* Customer demand of 1,600 MCF/Hour (900 MCF/hour plus 700 MCF/hour)
* Customer demand of 1,900 MCF/Hour (900 MCF/hour plus 1,000 MCF/hour)

System Improvements needed for 1,300 MCF/Hour (Existing 900 MCF/hour plus 400 MCF/hour)

The system can handle this flow with the following system Improvements (Estimated Cost $1.1MM):

* Construct 6-inch diameter crossover gas mains to connect the existing 8-inch Tap-line to the existing 6-inch Tap-line at three locations on Hwy 81. $150K
* Construct 1,200 linear feet of 6-inch diameter gas main from the 6-inch gas main on E. Bonnell St. to the traffic circle at Bob Williams Pkwy & Keegan Ct. $200K
* Construct 3,600 linear feet of 6-inch gas main on Hazelbrand Rd, from Hwy. 142 to the customer's meter station. $450K
* Construct an industrial Pressure Regulating and Metering Station at the Hazelbrand Rd project site. $300K

System Improvements needed for 1,600 MCF/Hour (Existing 900 MCF/hour plus 700 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $11MM):

* Improvements to Transco's existing Delivery Point Station located off Hwy 81 in Walnut Grove. $2.8MM
* Construct 25,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 81 and Hwy 142. $7MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure. $100K

System Improvements needed for 1,900 MCF/Hour (Existing 900 MCF/hour plus 1000 MCF/hour)

The system can handle this flow with the improvements listed above plus the following system Improvements (Estimated Cost $16MM): :

* Construct 43,000 linear feet of 12-inch diameter gas main from Transco's Delivery Point to the intersection of Hwy 142 and Alcovy Rd. $12MM
* Connect the new 12" gas main to the 6-inch diameter crossover gas mains along Hwy 81 so that all the tap-lines operate at the same pressure.
* Connect the new 12" gas main to the 8-inch diameter gas mains at Alcovy Rd.

Hello Jason

Sorry for the delay. I have been in meetings the last couple of days and will be not have availability until Thursday between 12 and 3 eastern.

Thanks

Scott

Adding David Bell with VoltaGrid.

Scott, please let us know if you have time tomorrow for a call.

Thanks.

Scott,

I left you a VM on your mobile phone. I called to talk about 10835 Hazelbrand Rd, Covington

I just spoke with Mike Jewell, cc'd. He suggested I contact you and offered to join the conversation.

I'd like to discuss the results of the engineering analysis commissioned by our partner VoltaGrid. I'd also like to understand the rate structure for the volumes we are going to be buying. I understand the rate structure could be different than the Large Interruptible Customer pricing on City of Covington's website. Covington, Georgia | Official Website <https://linkprotect.cudasvc.com/url?
a=https%3a%2f%2fcityofcovington.org%2findex.php%3fsection%3dgas_rates&c=E,1,2DsPnMJCjHZWGsW4af9UxB7lEqKlEIEgjy-RwVrnop39odQuGHydE5Fr16hxUi6M55KFGwh-SmI29E83X-kkD4N_IplXf3XjDbInfyuJ2FFdZxxRkMKQ&typo=1>

Do you have some time to talk tomorrow?

Jason Volk

That was Scott's recommendation that he previously told them as an estimate due to the short amount of time that they plan to use natural gas at their facility. The project requires extensive work on our part to provide the gas needed only to be used for a very short and specific time span. If they were going to be a long-term customer or use it more than up to 2027, I would feel more comfortable reducing the margin. We can set the rate anywhere you wish.

Good Afternoon,

What made you decide to go with the highest margin?

Tres

Mike,

Scott asked me to put the attached spreadsheet to together to look at the data center project cost of gas using the delivered supply quote we received earlier through Jeff B and a $0.20 flat distribution margin for all volumes. After your review, let me know your thoughts and or concerns.

If anyone else has any comments, please let the group know. Once everyone is on the same page, I will edit the transportation agreement, and can also help with a gas supply agreement if they continue down the path of the city providing the gas supply.

Thanks,
Rusty
