Subject: RE: City of Covington tap and meter

Brandon,

Thanks for the high-level details this morning.

I discussed the request with Christine Martinovich which is the customer development Rep for Covington and MGAG. She will reach out with next steps which might involve having a meeting with our FEED team and some of our measurement SME's to understand the request completely.

If there are specific questions that you have about the current meter station, please send them and our team can start reviewing them.

Thanks,

*****CAUTION! EXTERNAL SENDER*** STOP. ASSESS. VERIFY!! If suspicious, STOP and click the Phish Alert Button**

Hello Carlos,

Good to talk this morning. As we discussed on the phone, we're working with a customer and the City of Covington and MGAG on a project in Covington, GA that would require some meter station modifications coming off of Transco. We'd like to connect with the right person at Transco to help us understand the capacities of the current tap, meter set, and pressure regulation. Timing is tight on this project, and we don't think there is time to install a new tap on Transco and loop Covington's system all the way back to the project site, but we think there may be a way to solve for the customers requirements via some upgrades to Covington's system and some modification to Transco's existing pressure regulation and measurement set up. Could you help direct us to the right folks?

Thanks in advance.
