Brandon
I have been traveling this week but was able to coordinate with Mike Jewell in Covington and our Engineer - Bruce Bagnasco (copied) to get started.

Bruce – Please reach out to Brandon and get the specific location so you can begin designing a route and materials estimates.

Thanks
Scott

Hey guys, cycling this back up. Who could I connect with on this? Thank you.

Good morning,

I'm adding myself into this old thread. We'd like to pick back up this conversation and commission an engineering study. @sstolleson@gasauthority.com, are you still the point person for this? Would you give me a call below or let me know the best time to talk? Thanks.

Morning TJ
Sorry for the delay but we have been trying to find other alternatives.
On your bullet points below – the first two are still accurate.
For the third, we have explored smaller diameter pipe at higher pressures and believe it would take the total cost down to the $18 - $20 million range. This is still very preliminary but is based on other similar projects of similar capacity and line size.
Again, we would need to get more formal engineering studies to get to a firm estimate.

Thanks
Scott

Hi Scott/Mike

Just following up to our meeting last week to see if you have any updates on your side?

- Is 400 MSCFH the max volume with the minimal upgrades
- Is 500 MSCFH was the max volume based on the next tier of upgrades.
- Have you evaluated a larger line size to reduce the cost of the 1000 MSFH upgrades

Thanks
