At the end of the day the all-in delivered price is the most important factor, we're indifferent to doing it as a transport or a delivered-molecule deal. I had the impression that Covington's preference is to do it as a delivered molecule arrangement, and we're fine with that if it's still competitive with a transport option and defensible as such to our boards.

We have some examples of transport and delivered molecule deals with other utilities in other jurisdictions for this sized load, if helpful. I suspect that you and GAGA have some other good reference points as well.

Brandon,

This is a new rate that is under discussion with the Gas Authority, and we need to know how the gas is going to be delivered from Transco. Is this a transportation customer where you purchase the gas and it is transported to the City Gate or will you be buying gas supply from the City/Gas Authority? This is essential to terms used in the rate description and costs associated for this proposed rate.

Thanks,
Mike

Good Afternoon Mike, we had discussed developing a large load rate appropriate for this size of customer in advance of your 7/21 city council meeting. When can we get on the phone this week to talk about that?

Good morning,

Attached are the three site locations that will be interconnected as proposed for the project. There is an additional tie-in at the Transco site that is not shown due to uncertain location of upgrades. I have spoken with Scott Tollison (Gas Authority) and he is confident in the load calculations for the site, as previously submitted, are good to go. Let's follow up next week with any other updates or questions.

Have a great 4th of July weekend!
Mike
